

Table of contents

Table of contents	5
Acknowledgements	13
List of abbreviations and symbols	15
1. Introduction and overview.....	17
1.1. Introduction and rationale for the investigation of RS	17
1.2. Overview of the chapters.....	20
2. Background and framework for the phonetic analysis of RS	27
2.1. Defining <i>Raddoppiamento sintattico</i> (RS).....	27
2.1.1. Distinguishing two kinds of RS: the test of phrase finality	30
2.2. Diachrony and synchrony of RS	31
2.3. Motivating stress-conditioned RS synchronically	33
2.3.1. Word-final stressed vowels are short	33
2.3.2. Word-final stress rather than length	35
2.3.2.1. Destressing of word-final stressed vowels	36
2.4. The domain of application of RS	38
2.5. Are RS geminates the same as WM geminates?	41
2.6. The singleton-geminate contrast in Standard Italian	44
2.6.1. Consonant duration.....	45
2.6.2. Duration of the preceding vowel	49
2.6.3. Consonant : vowel (C/V) ratio	51
2.7. RS blocked	53
2.7.1. ‘Phonological’ blockers in potential RS sequences	54
2.7.2. Pauses and other phonetic blockers in potential RS sequences.....	56
2.8. What is the <i>Gorgia toscana</i> (GT).....	59
2.9. Why another investigation into RS?.....	63
2.9.1. RS consonant gemination is obligatory	63
2.9.2. RS consonant lengthening is categorical.....	68
2.9.3. Word-final vowels do not lengthen	69

2.9.4. Unstressed and stress-conditioned RS should be distinguished.....	71
2.9.5. RS does not interact with the Gorgia toscana.....	73
2.10. Why Sienese (and not ‘Standard’) Italian?	76
2.10.1. Existing studies on Sienese Italian	78
2.10.2. RS in Sienese: where it occurs	79
2.10.3. Preaspiration in Sienese Italian.....	80
2.11. Spontaneous speech.....	81
2.12. Distinguishing micro- and macro-prosodic glottalization phenomena.....	84
2.13. Final comments	88
 3. RS blocked and unblocked: an auditory perceptual (and descriptive acoustic) study	89
3.1. Introduction and overview	89
3.2. Background: why an auditory perceptual investigation of RS?90	
3.3. Methods	93
3.3.1. The speech material.....	93
3.3.2. Identification and organization of RS trigger words	94
3.3.2.1. Stress-conditioned RS triggers	95
3.3.2.2. Unstressed RS triggers	95
3.3.3. Overview of the auditory analysis.....	96
3.3.4. RS blocking phenomena: auditory analysis	97
3.3.5. RS-blocking phenomena: acoustic analysis	100
3.3.6. Auditory analysis of sequences without pauses (RSP) ...	103
3.4. Results & Discussion.....	105
3.4.1. Overall frequency of blocking phenomena: RSP v. RSNP	105
3.4.2. The (auditory) phonetic correlates of RS blocked.....	108
3.4.3. RS-blocking phenomena: qualitative acoustic analysis ..	110
3.4.3.1. Silent pause	111
3.4.3.2. Vowel lengthening	113
3.4.3.2. Pitch breaks	114
3.4.3.4. Glottal stop	116
3.4.4. Voiceless stops in RS-blocked contexts: acoustic analysis	117
3.4.4.1. Voiceless stops in phrase-initial contexts.....	118
3.4.4.2. Weakened variants in phrase-initial contexts.....	118

3.4.5. RSP sequences: frequency of RS consonant lengthening	121
3.4.5.1. Occurrences of RS across Phonological Phrase boundaries	125
3.4.5.2. Partially lengthened consonants in RSP contexts	127
3.4.5.3. Occurrences of GT variants in RSP contexts	130
4. The phonetic realisation of stress-conditioned RS	133
4.1. Introduction and overview.....	133
4.2. Background issues to the phonetic analysis of stress-conditioned RS.....	134
4.2.1. Phonological length, phonetic duration and RS	135
4.2.2. Stress and RS C-lengthening	136
4.2.3. Signs of phonetic overlap with unstressed RS	140
4.3. Methods	140
4.3.1. The data: stress-conditioned RS sequences.....	140
4.3.2. Measurement criteria.....	142
4.3.2.1. Vowel duration.....	143
4.3.2.2. Overall consonant duration	144
4.3.2.3. Preaspiration.....	144
4.3.2.4. Closure	146
4.3.2.5. Voice Onset Time (VOT).....	146
4.3.3. Categorization of tokens according to manner of articulation.....	147
4.3.4. Linking auditory and acoustic results: Just Noticeable Difference (JND).....	147
4.4. Results and discussion.....	148
4.4.1. Overview of the data	148
4.4.2. Vowel duration in stress-conditioned RS sequences.....	150
4.4.3. Consonant duration in stress-conditioned RS sequences	154
4.4.4. The C/V ratio and the perception of stress-conditioned RS	159
4.4.4.1. C/V ratio values in stress-conditioned RS sequences	159
4.4.4.2. Auditory v. acoustic analysis of stress-conditioned RS sequences	161
4.5. Further discussion.....	164
4.5.1. Word-final stressed vowels: reconciling phonological length with duration.....	165

4.5.2.	Destressing and the motivations for stress-conditioned RS	167
4.5.3.	Micro-prosodic glottalization and stress-conditioned RS	169
5.	The ‘other’ RS C-doubling: acoustic evidence of unstressed RS.....	171
5.2.	Background	173
5.2.1.	Defining unstressed RS: the historical account	173
5.2.2.	Korzen (1980): an alternative account	175
5.2.3.	Existing phonetic evidence of unstressed RS: Korzen (1980)	176
5.2.4.	Which words trigger unstressed RS?.....	180
5.3.	Methods: organization of the unstressed RS sequences	187
5.4.	Results and discussion.....	189
5.4.1.	Overview	189
5.4.2.	Unstressed RS sequences: vowel duration	190
5.4.3.	Consonant duration.....	194
5.4.4.	Unstressed RS: the consonant/vowel ratio	197
5.4.5.	Acoustic v. auditory perception of unstressed RS.....	199
5.5.	Further discussion.....	201
6.	The phonetic realisation of RS and WM geminates in Sienese Italian: the impact of preaspiration	203
6.1.	Introduction: the discovery of preaspiration in Sienese Italian.....	203
6.2.	Background	207
6.2.1.	More detail on /pp tt kk/ across languages and in Italian	207
6.2.2.	Preaspirated voiceless stops	209
6.2.3.	Linking preaspiration and /s/-aspiration.....	211
6.3.	Overview of the experimental investigation into preaspiration	213
6.3.1.	Statistical tests	215
6.4.	Results and discussion.....	216
6.4.1.	Preaspirated stops amongst the other phonetic variants	216
6.4.1.1.	Plain voiceless stops.....	218
6.4.1.2.	Preaspirated stops	220
6.4.1.3.	(Preaspirated) fricatives.....	221
6.4.1.4.	Incomplete stops.....	222

6.4.1.5. Distribution of the four variants	223
6.4.1.6. Durational characteristics of the four variants	229
6.4.2. Preaspirated voiceless stops up close	233
6.4.3. Manner and perceived C length: auditory v. acoustic results.....	243
6.5. Further discussion.....	245
6.5.1. Summary of results: preaspiration of /p: t: k:/.....	245
6.5.2. Preaspiration as reinforcing voiceless stops: acoustic results.....	246
6.5.3. Preaspiration and the perception of consonant length....	247
6.5.4. On the origins of preaspiration in Sienese Italian	248
7. Understanding RS: preaspiration and the potential overlap between RS and the <i>Gorgia Toscana</i>	253
7.1. Introduction	253
7.2. Background: a link between GT and preaspiration?	256
7.3. Methods	257
7.3.1. The data	257
7.3.2. Overview of analysis of the singleton tokens.....	258
7.4. Results & discussion	260
7.4.1. Phonetic realisation of /p t k/: seven variants.....	260
7.4.1.1. Duration and articulatory reduction of singleton /p t k/	262
7.4.1.2. Distribution of the seven variants of singleton /p t k/	266
7.4.1.3. Summary of the realisation of singleton /p t k/	271
7.4.2. Singleton /p t k/ v. geminate /pp tt kk/: duration.....	272
7.4.3. Singleton /p t k/ v. geminate /pp tt kk/: manner	276
7.5. Further discussion.....	282
7.5.1. GT in Sienese and the role of preaspirated fricatives.....	283
7.5.2. GT v. RS: duration, manner and preaspiration.....	284
8. Implications and conclusions	287
8.1. Introduction.....	287
8.2. Summary of findings	287
8.3. Phonological implications of the phonetic results.....	292
8.3.1. The phonetic phrase as the domain of RS	292
8.3.2. Word-final stressed vowels as the direct trigger of RS ...	294
8.3.3. Unstressed v. stress-conditioned RS	296
8.3.4. Incorporating preaspiration into RS	299
8.3.5. The optionality of RS	304

8.3.6.	The interaction between GT and RS	304
8.3.7.	Identifying RS: perceptual v. acoustic results	307
8.3.8.	Vowel length, syllable weight and trimoraicity	308
8.4.	Future research	314
8.5.	Final comments	317
Appendices	319
Appendix 1a.....	319
Appendix 1b.....	321
Appendix 2.....	327
Bibliography	331
Index	345
