1 Historical background and geological framework	1
2 Early to middle Paleozoic climates and colonisation of the land	26
3 Collapsing ice sheets and evolving polar forests of the middle to late Paleozoic	57
4 Icehouse to hothouse: floral turnover, the Permian–Triassic crisis and Triassic vegetation	105
5 Gondwana break-up and landscape change across the Triassic–Jurassic transition and beyond	161
6 Fern-conifer dominated Early Cretaceous (Aptian–Albian) ecosystems and the angiosperm invasion	189
7 The origin of southern temperate ecosystems	249
8 The heat is on: Paleogene floras and the Paleocene–Eocene warm period	308
9 After the heat: late Eocene to Pliocene climatic cooling and modification of the Antarctic vegetation	390
<i>Appendix: Cretaceous to Neogene fossil floras</i>	458
<i>Index</i>	466
