Contents	VII
List of Figures	XI
List of Tables	XII
Notation	XIII
1 Introduction	1
1.1 Purpose of this thesis	2
1.2 Applications of Stochastic Programming	2
1.2.1 Power Production and Management	3
1.2.2 Finance	4
1.2.3 Fleet Management	5
1.2.4 Health Care Management and Emergency Services .	6
1.2.5 Production	7
1.2.6 Supply Chain Network Design and Facility Location	8
1.2.7 Telecommunications	8
1.3 About Stochastic Programming Problem	10
1.4 Outline	11
2 Preliminaries	13
2.1 Preliminaries from Statistics	13
2.2 General Description of a Stochastic Optimization Problem	17
2.3 Stochastic Programming	20
2.4 Related fields of study	23
2.4.1 Decision Analysis	23
2.4.2 Markov Decision Processes	24
2.4.3 Robust Optimization	26

2.4.4	Stochastic Decision Theory	28
2.4.5	Stochastic Optimal Control	29
2.5	Summary	30
3	Properties and Modeling Issues	33
3.1	Scenario Tree Representation	35
3.2	The Benefit from Stochastic Programming	42
3.2.1	The Value of the Stochastic Solution	42
3.2.2	The Expected Value of Perfect Information	49
3.3	Robustness and Chance Constraints	52
3.3.1	Model Robustness	52
3.3.2	Chance Constraints	53
3.4	Risk Aversion	61
3.5	Summary	63
4	Scenario Generation	65
4.1	Sample Average Approximation	66
4.2	Summary	72
5	Algorithms	75
5.1	The L-Shaped Method	76
5.2	Stochastic Dynamic Programming	87
5.3	Lagrangean Relaxation	92
5.3.1	Lagrangean Relaxation of Coupling Constraints	94
5.3.2	Lagrangean Relaxation of Non-Anticipativity Constraints	99
5.4	Branch & Fix Coordination	106
5.5	Summary	107
6	A Branch-and-Bound Approach for Multi-Stage Stochastic Mixed 0-1 Programs: A Non-Anticipativity Relaxation with Warmstart (NARW)	109
6.1	Relaxation	110
6.2	Branch-and-Bound	116
6.2.1	Branching	116
6.2.2	Bounding	119
6.2.3	Fathoming	120
6.3	Warmstart	126

6.4	NARW at a Glance	136
6.5	Summary	139
7	A multi-stage stochastic supply network design problem with financial decisions and risk management	141
7.1	Motivation	142
7.2	Problem Description	148
	7.2.1 Dealing with uncertainty	149
	7.2.2 Decisions	149
	7.2.3 Investments	150
	7.2.4 Service level	151
	7.2.5 Downside risk for the ROI	152
	7.2.6 Objective	153
	7.2.7 Constraints	154
7.3	Formulation	154
	7.3.1 Notation	154
	7.3.2 D(eterministic)E(quivalent)P(rogram)	158
7.4	Path-based formulation	165
7.5	The Value of the Stochastic Solution in SCND_{MSFR}	168
7.6	Computational Results	173
	7.6.1 General Framework	173
	7.6.2 VSS and Warmstart Solutions	174
	7.6.3 Results from NARW	178
7.7	Summary	185
8	Conclusions and Future Research	187
A	Data	197
