  5.1 Introduction .............................................................................................................................. 181
  5.2 Formulation of Variational Inequality Problems ..................................................................... 182
    5.2.1 Optimization Problem as a VI Problem ............................................................................. 182
    5.2.2 VI Formulation of Nash Equilibrium: No Linking Constraints ......................................... 183
      5.2.2.1 Illustrative Example. Nash-Cournot Model of Coal Market from Chapter 3 .............. 185
    5.2.3 VI Formulation of Generalized Nash Equilibrium With Linking Constraints: A Special Case .............................................................................................................. 186
      5.2.3.1 Illustrative Example. Nash-Cournot Model of Coal Market with Coal Yard Limit from Chapter 3 .............................................................................................................. 189
      5.2.3.2 Illustrative Example. Competitive Equilibrium of Two Related Markets: Coal and Wood from Chapter 3 ......................................................................................... 190
      5.2.3.3 Illustrative Example. PIESS Multicommodity Competitive Equilibrium Model from Chapter 1 ......................................................................................................................... 193
5.3 Relations between Variational Inequality and Complementarity Problems

5.3.1 Any Complementarity Problem Has an Equivalent Variational Inequality Problem

5.3.1.1 Illustrative Example. NCP and Two VI Forms for Coal Yard Model

5.3.2 Any Variational Inequality Problem Has an Equivalent Complementarity Problem

5.3.2.1 Illustrative Example. Comparison of MCP and VI Forms of Coal Market Model with Coal Yard Limits

5.3.3 Alternative Equivalent Forms of Variational Inequality Problems

5.3.3.1 Alternative Form of VI for Nash Equilibrium with Linking Constraints

5.3.3.2 Illustrative Example. Alternative VI for Nash-Cournot Model of Coal Market with Yard Limit

5.4 Generalized Nash Equilibrium as Quasi-variational Inequality Problem

5.4.1 Some Important Properties of Quasi-variational Inequality Problems

5.4.1.1 The VI Solution is a QVI Solution: Linking Duals are Equal

5.4.1.2 Illustrative Example. Simple Electric Capacity Market Model with High Cost Green Energy and Equal Prices for All

5.4.1.3 Modified VI: First Price-Directed Search for QVI Solutions

5.4.1.4 Illustrative Example. Electric Capacity Market Model with Subsidized Green Energy

5.4.1.5 Modified VI: Second Price-Directed Search for QVI Solutions

5.4.1.6 Illustrative Example. Electric Capacity Market Model with Green Price a Multiple of Conventional Price

5.4.1.7 Modified VI: Resource-Directed Search for QVI Solutions

5.4.1.8 Illustrative Example. Electric Capacity Market Model with Quotas for Green and Conventional

5.5 Summary

5.6 Exercises
### 6 Optimization Problems Constrained by Complementarity and Other Optimization Problems

#### 6.1 Introduction
- **Practical Interest**: 221
- **Structure and Basic Classification**: 222

#### 6.2 Optimization Problems Constrained by Other Optimization Problems, OPcOP
- **General Formulation**: 223
- **Illustrative Example. Strategic Offering, OPcOP**: 226
- **Illustrative Example. Vulnerability Assessment, OPcOP**: 229
- **Illustrative Example. Transmission Investment, OPcOP**: 231
- **Basic Assumption: Constraining Problems are Convex**: 235
- **Mathematical Program with Complementarity Constraints, MPCC**: 235
- **Illustrative Example. Vulnerability Assessment, MPCC**: 236
- **Mathematical Program with Equilibrium Constraints, MPEC**: 237
- **Illustrative Example. Strategic Offering, MPEC**: 237
- **Illustrative Example. Transmission Investment, MPEC**: 238
- **Stochastic OPcOPs**: 239
- **Illustrative Example. Strategic Offering, sOPcOP**: 240

#### 6.3 Optimization Problems Constrained by Linear Problems, OPcLP
- **Mathematical Program with Primal and Dual Constraints, MPPDC**: 242
- **Illustrative Example. Strategic Offering, MPPDC**: 243
- **Illustrative Example. Vulnerability Assessment, MPPDC**: 244
- **Illustrative Example. Transmission Investment, MPPDC**: 246
- **Mathematical Program with Complementarity Constraints, MPCC**: 247
- **Stochastic OPcLPs**: 248
- **Illustrative Example. Transmission Investment, sOPcLP**: 249

#### 6.4 Transforming an MPCC/MPEC/MPPDC into a MILP
- **Fortuny-Amat McCarl Linearization**: 250
- **SOS1 and Penalty Function Linearization**: 251
- **Other Linearizations**: 251
6.4.3.1 Illustrative Example. Strategic Offering:
Exact Linear Transformation .......................... 252
6.5 Writing and Solving the KKTs of an MPPDC ......................... 253
6.5.1 KKTs of an MPPDC .................................. 253
6.5.2 Illustrative Example. Strategic Offering, KKTs .......... 254
6.5.3 Reformulating an MCP as an Optimization Problem . 256
6.5.4 Illustrative Example. Strategic Offering: MCP
Optimization Problem ...................................... 257
6.6 Summary .................................................. 258
6.7 Exercises .................................................. 258

References .................................................................. 261

7 Equilibrium Problems with Equilibrium Constraints ............ 263
7.1 Introduction .................................................. 263
7.2 The EPEC Problem ........................................... 264
7.2.1 Problem Statement and Diagonalization Algorithm .. 264
7.2.2 Diagonalization Applied to EPEC ......................... 267
7.3 Energy Applications of EPECs ................................ 271
7.4 EPEC Power Market Model 1: Strategic Quantity Decisions
by Generators ................................................... 274
7.4.1 Model Formulation ....................................... 274
7.4.1.1 Model Structural Assumptions ..................... 274
7.4.1.2 Consumer ............................................. 276
7.4.1.3 Transmission Provider .............................. 277
7.4.1.4 Follower Equilibrium ............................... 277
7.4.1.5 Generator (Leader) MPEC ......................... 278
7.4.1.6 EPEC ............................................... 279
7.4.2 Illustrative Example ....................................... 279
7.4.2.1 Assumptions ......................................... 279
7.4.2.2 Follower Problem .................................... 280
7.4.2.3 Leader Problems ................................... 281
7.4.2.4 EPEC Statement and Analysis ..................... 282
7.4.2.5 Attempted Solution by Diagonalization .......... 285
7.4.2.6 Mixed Strategy Solution ............................ 286
7.4.2.7 Comparison of Outcomes of Alternative
Game Formulations ........................................... 287
7.4.2.8 Sensitivity Case: Single Oligopolist ............... 288
7.4.2.9 Sensitivity Case: Transmission Expansion ........ 289
7.4.2.10 Summary of Cournot EPEC Example ............ 290
7.5 EPEC Power Market Model 2: Strategic Offering by
Generators ....................................................... 291
7.5.1 Model Formulation ....................................... 291
7.5.1.1 Structural Assumptions ............................. 291
7.5.1.2 Auctioneer (Transmission Provider) .............. 292
8.2.2.2.1 Illustrative Example. Matrix splitting for two-commodity model: \( B = \text{diagonal part of } M \) 336

8.2.2.2 Illustrative Example. Matrix splitting for two-commodity model: symmetric \( B \) 337

8.2.2.3 Convergence of Matrix Splitting Algorithms for the LCP 338

8.2.2.3 Other Iterative Methods for LCPs 340

8.3 Algorithms for NCP Models 340

8.3.1 Newton's Method for Systems of Smooth Equations 342

8.3.1.1 Undamped Newton Method for Smooth Equations 343

8.3.1.1.1 Illustrative Example. Solving two equations in two unknowns by Newton's method 343

8.3.1.1.2 Convergence of the Undamped Newton Method for Smooth Equations 344

8.3.1.2 Damped Newton Methods for Smooth Equations 345

8.3.1.2.1 Illustrative Example. Damping Procedures to Accelerate Convergence 345

8.3.1.2.2 Convergence of the Damped Newton Method for Smooth Equations 347

8.3.2 Newton's Method for the NCP 349

8.3.2.1 Constructing an Approximate LCP 349

8.3.2.2 Solving the Approximate LCP 350

8.3.2.3 Getting Started: Solving the First Approximate LCP 351

8.3.2.4 Two Examples Without Damping 352

8.3.2.4.1 Illustrative Example. PATH method for two-commodity LCP 352

8.3.2.4.2 Illustrative Example. PATH method for two-commodity NCP 353

8.3.2.5 Damping in the Newton Method for NCPs 355

8.3.2.5.1 Illustrative Example. Min-based merit function for two-commodity NCP 356

8.3.2.5.2 Path Search between Previous Iterate and Newton Point 356

8.3.2.6 Summary and Overview of Other Features of the PATH Algorithm 358
8.4 Algorithms for VI Models ........................................ 359
8.4.1 Solve Equivalent KKT System as MCP .................. 359
8.4.2 Iterative Methods: Sequential Optimization ............ 360
  8.4.2.1 Project Independence Evaluation System (PIES) .......... 360
    8.4.2.1.1 Illustrative Example. Simple PIES model and algorithm .......... 362
    8.4.2.1.2 PIES-q Algorithm ........................................ 364
    8.4.2.1.3 Convergence of PIES and PIES-q Algorithms .................. 364
  8.4.2.2 A Nonlinear Approximation of $G$ – Diagonalization Method ........ 365
    8.4.2.2.1 Illustrative Example. The PIES-q algorithm as diagonalization method on a VI .................. 366
  8.4.2.3 Symmetric Linear Approximations of $G$ ................ 367
  8.4.2.4 Convergence of Diagonalization and Symmetric Linear Approximation ........ 367

8.5 Summary ......................................................... 368

8.6 Appendix: Introduction to Theory for PATH and Other NCP Algorithms .................. 369
  8.6.1 Projection Mappings ........................................ 370
    8.6.1.1 Illustrative Example. Projection Mapping for $B = \mathbb{R}^n_+$ ........ 370
    8.6.1.2 Illustrative Example. Projection Mapping for $B$ as a Rectangular Box ........ 371
  8.6.2 NCP Reformulated as Nonsmooth Equation Using Projection Mapping .................. 371
    8.6.2.1 Illustrative Example. Illustration of Theorem 8.3 with $x \neq z$ ........ 372
    8.6.2.2 Illustrative Example. Illustration of Theorem 8.3 with $x = z$ ........ 372
  8.6.3 Some Useful Merit Functions and Corresponding Nonsmooth Equations .................. 373
    8.6.3.1 Merit Function Based on Min Function ........ 373
    8.6.3.2 Merit Function Based on Norm of the Normal Map ........ 374
    8.6.3.3 Merit Function Based on Fischer-Burmeister Function ........ 374
      8.6.3.3.1 Illustrative Example. Fischer-Burmeister-based merit function for two-commodity NCP ........ 375
    8.6.3.4 Merit Function Based on Plus Function ........ 375
  8.6.4 Damped Newton Method for NCP as Nonsmooth Equation .................. 376

10.4.5.4 Storage Operations ....................................... 452
10.4.5.5 Supplier's Problem (Version 2: Production,
Export and Storage Functions) ................................. 454
10.4.6 Transportation .................................................. 456
10.4.7 A Model for the Whole Market ............................ 457
10.4.8 Illustrative Example. Small Natural Gas Network
Equilibrium ............................................................ 459
10.4.8.1 Overview .................................................... 459
10.4.8.2 Base Case .................................................. 461
10.4.8.3 Analysis of Storage ....................................... 465
10.4.8.4 Analysis of Total Gas Reserves Constraint ......... 466
10.4.8.5 Analysis of Contract Sales ............................ 468
10.5 Summary .......................................................... 469
10.6 Exercises .......................................................... 470

References ..................................................................... 473
11 Electricity and Environmental Markets ............................................. 477
  11.1 Introduction ........................................................................ 477
  11.2 Transmission-Constrained Electricity Markets ......................... 479
    11.2.1 Short-Run, Perfectly Competitive Market ......................... 480
    11.2.2 Illustrative Example. Transmission-Constrained
         Perfect Competition Equilibrium ......................................... 485
    11.2.3 Oligopolistic Market: A Cournot Model ............................. 489
    11.2.4 Illustrative Example. Transmission-Constrained
         Cournot Equilibrium ....................................................... 495
  11.3 Environmental Markets: Emissions Trading .............................. 497
    11.3.1 A Simple Model of Emissions Trading among
         Producers .................................................................... 499
    11.3.2 Illustrative Example. Simple Source-Based
         Emissions Trading Equilibrium ............................................. 501
    11.3.3 A Simple Model of Emissions Trading among
         Load-Serving Entities .......................................................... 503
    11.3.4 Illustrative Example. Simple Load-Based Market
         Equilibrium .................................................................... 504
    11.3.5 Model Analysis: Equivalence of Source-Based and
         Load Based Trading .............................................................. 506
  11.4 Summary ............................................................................. 507
  11.5 Exercises ............................................................................. 508
