

# TABLE OF CONTENTS

Foreword	ix
Program Committee	xi
<b>Part I: Application of Matrix Methodology</b>	
Formation of the DSM Industry Special Interest Group (DSMiSIG) <i>Harold A. Stowe, Richard Paynting and Elke Scheurmann</i>	3
DSM based knowledge configuration methodology <i>Toufik Boudouh, Cyrille Vernier, Nadhir Lebaal and Samuel Gomes</i>	17
Welding process analysis using literature-based Design Structure Matrix <i>Sebastian Maisenbacher, Ali Yassine, Mohamad El-Zein, Rakesh Goyal and Maik Maurer</i>	31
Design for adoptability – Support of upgrade strategies to react to evolving stakeholder needs and requirements <i>Phillip Schrieverhoff and Udo Lindemann</i>	43
MDM-based representation of requirement/function relation in the sound design for consumer electronics <i>Kenichi Seki, Kazuko Yamagishi and Hidekazu Nishimura</i>	53
Value and waste dependencies and guidelines <i>G.I. Siyam, K.G.M. Kirner, D.C. Wynn, U. Lindemann and P.J. Clarkson</i>	65
Flexibility analysis of a supply chain using Design Structure Matrix <i>Zahra Yousefi, S.M. Baqer Malaek and Sajad Emamipour.</i>	79
<b>Part II: Modelling Approaches and Information Acquisition</b>	
Conditional DSM <i>Cheng-Wen Chang and David M. Chiang</i>	91
Finding parameter constraint networks in a product system <i>Akihiro Hirao, Kazuya Oizumi and Kazuhiro Aoyama</i>	101
A port-based approach for modelling the structure of mechatronic modules <i>Konstantin Kernschmidt, Gülden Bayrak and Birgit Vogel-Heuser</i>	111
Effective & efficient DSM configuration guidelines for low-cost development of complex systems <i>Sadegh Mirshekarian B.</i>	125

Generating a network of information dependencies automatically <i>Reid R. Senescu, Austen W. Head, Martin Steinert and Martin A. Fischer</i>	139
---	-----

### **Part III: System Architectures**

A matrix-based approach for a qualitative assessment of system architecture specific processes regarding efficiency <i>Wolfgang Bauer, Hannes Elser and Udo Lindemann</i>	155
Functional structure based change assessment in product design <i>Kazuya Oizumi and Kazuhiro Aoyama</i>	167
Structural complexity metric for engineered complex systems and its application <i>Kaushik Sinha and Olivier de Weck</i>	181

### **Part IV: Project and Process Management**

Handling a Design Structure Matrix based on fuzzy data <i>Pierre Bonnal, Mathieu Baudin and Jean-Michel Ruiz</i>	195
Management of relationships between product information on model based design process <i>Takao Eguchi, Tsuyoshi Koga and Kazuhiro Aoyama</i>	211
Using DSM for extracting and analyzing the underlying problems of our projects <i>Kiyoshi Morita</i>	225
Integrated modelling of product- and process-related information <i>Albert Albers, Andreas Braun and Sebastian Salomon</i>	239
A DSM-based “2.0” system for human intervention planning and scheduling in facilities emitting ionizing radiations <i>Mathieu Baudin, Pierra Bonal and Jurgen De Jonghe</i>	253
Designing interoperable lean, agile, resilient and green industrial ecosystems <i>Izunildo Cabral and Antonio Grilo</i>	263
Interplay between product architecture and organizational structure <i>Kaushik Sina, Denman James and Olivier de Weck</i>	275

### **Part V: Software Engineering**

Architecture migration using DSM in a large-scale software project <i>Takashi Maki</i>	291
A new approach to component reuse in multi-software development project management by using an information-centric project model <i>Akihiro Sakaedani, Toshiyuki Yasui, Seiko Shirasaka and Takashi Maeno</i>	301

## **Part VI: Civil Engineering**

Classifying components based on change propagation potential <i>Rachael Grinnell, Robert Schmidt III and Simon Austin</i>	317
Analysing process-oriented BIM execution plan using MDM <i>Jeevan Jacob and Koshy Varghese</i>	329
Creating dynamic organizational modularity in lean construction design – Combining MDM and DSM methodology systematically <i>Tom Reichardt, Fatos Elezi, Iris D. Tommelein and Udo Lindemann</i>	343

## **Part VII: Management of Engineering Design Projects**

An ontology-representation of the integrated product engineering model <i>Albert Albers, Andreas Braun and Hannes Schmalenbach</i>	359
Dependency structure matrix modelling for human resource allocation <i>Albert Albers, Jan Breitschuh and Quentin Lohmeyer</i>	371
Stability of collaborative R&D networks: A simulation study <i>Peter Gust, Nils Altfeld and Jochen Kreutzfeldt</i>	385
The prediction of erratic states in product development <i>Mohammad Khastehdel and Saeed Mansour</i>	401
Modelling of cooperative work in concurrent engineering projects based on extended work transformation matrices with hidden state variables <i>Christopher M. Schlick, Sebastian Schneider and Sönke Duckwitz</i>	411
Simulation of product change effects based on design structure and domain mapping matrices <i>Sebastian Schneider, Christopher M. Schlick, Markus Röwenstrunk and Susanne Mütze-Niewöhner</i>	423
Increasing value in development projects using Domain Mapping Matrix <i>Qing Yang and Ting Lu</i>	437

## **Part VIII: Applications of DSM Methodology**

The Explainer and its use in engineering <i>Donald V. Steward</i>	449
--	-----

## **Part I – Continuation: Applications of DSM Methodology**

A conceptual approach to improve configuration of a prolonged manned mission spacecraft based on DMS <i>S.M. Bagher Malaek and Elmira Zohrevandi</i>	463
