Contents

Preface *XIII*

1 **Introduction** *1*

2 **Liquid Surfaces** *5*
2.1 Microscopic Picture of a Liquid Surface *5*
2.2 Surface Tension *6*
2.3 Equation of Young and Laplace *11*
2.3.1 Curved Liquid Surfaces *11*
2.3.2 Derivation of Young–Laplace Equation *13*
2.3.3 Applying the Young–Laplace Equation *15*
2.4 Techniques to Measure Surface Tension *16*
2.5 Kelvin Equation *21*
2.6 Capillary Condensation *24*
2.7 Nucleation Theory *28*
2.8 Summary *32*
2.9 Exercises *33*

3 **Thermodynamics of Interfaces** *35*
3.1 Thermodynamic Functions for Bulk Systems *35*
3.2 Surface Excess *36*
3.3 Thermodynamic Relations for Systems with an Interface *40*
3.3.1 Internal Energy and Helmholtz Energy *40*
3.3.2 Equilibrium Conditions *41*
3.3.3 Location of Interface *42*
3.3.4 Gibbs Energy and Enthalpy *43*
3.3.5 Interfacial Excess Energies *44*
3.4 Pure Liquids *46*
3.5 Gibbs Adsorption Isotherm *48*
3.5.1 Derivation *48*
3.5.2 System of Two Components *49*
3.5.3 Experimental Aspects *51*
3.5.4 Marangoni Effect *53*
3.6 Summary *54*
3.7 Exercises *55*

4	**Charged Interfaces and the Electric Double Layer**	*57*
4.1	Introduction	*57*
4.2	Poisson–Boltzmann Theory of Diffuse Double Layer	*58*
4.2.1	Poisson–Boltzmann Equation	*58*
4.2.2	Planar Surfaces	*59*
4.2.3	The Full One-Dimensional Case	*62*
4.2.4	The Electric Double Layer around a Sphere	*63*
4.2.5	Grahame Equation	*64*
4.2.6	Capacitance of Diffuse Electric Double Layer	*66*
4.3	Beyond Poisson–Boltzmann Theory	*67*
4.3.1	Limitations of Poisson–Boltzmann Theory	*67*
4.3.2	Stern Layer	*69*
4.4	Gibbs Energy of Electric Double Layer	*70*
4.5	Electrocapillarity	*72*
4.5.1	Theory	*73*
4.5.2	Measurement of Electrocapillarity	*75*
4.6	Examples of Charged Surfaces	*76*
4.7	Measuring Surface Charge Densities	*84*
4.7.1	Potentiometric Colloid Titration	*84*
4.7.2	Capacitances	*86*
4.8	Electrokinetic Phenomena: the Zeta Potential	*87*
4.8.1	Navier–Stokes Equation	*88*
4.8.2	Electro-Osmosis and Streaming Potential	*90*
4.8.3	Electrophoresis and Sedimentation Potential	*92*
4.9	Types of Potential	*95*
4.10	Summary	*97*
4.11	Exercises	*97*
5	**Surface Forces**	*99*
5.1	Van der Waals Forces between Molecules	*99*
5.2	Van der Waals Force between Macroscopic Solids	*103*
5.2.1	Microscopic Approach	*104*
5.2.2	Macroscopic Calculation – Lifshitz Theory	*107*
5.2.3	Retarded Van der Waals Forces	*112*
5.2.4	Surface Energy and the Hamaker Constant	*113*
5.3	Concepts for the Description of Surface Forces	*113*
5.3.1	The Derjaguin Approximation	*113*
5.3.2	Disjoining Pressure	*116*
5.4	Measurement of Surface Forces	*117*
5.5	Electrostatic Double-Layer Force	*120*
5.5.1	Electrostatic Interaction between Two Identical Surfaces	*120*
5.5.2	DLVO Theory	*125*
5.6	Beyond DLVO Theory	*127*
5.6.1	Solvation Force and Confined Liquids	*127*
5.6.2	Non-DLVO Forces in Aqueous Medium	*129*

5.7 Steric and Depletion Interaction *130*
5.7.1 Properties of Polymers *130*
5.7.2 Force between Polymer-Coated Surfaces *131*
5.7.3 Depletion Forces *134*
5.8 Spherical Particles in Contact *135*
5.9 Summary *140*
5.10 Exercises *141*

6 Contact Angle Phenomena and Wetting *143*
6.1 Young's Equation *143*
6.1.1 Contact Angle *143*
6.1.2 Derivation *144*
6.1.3 Line Tension *148*
6.1.4 Complete Wetting and Wetting Transitions *149*
6.1.5 Theoretical Aspects of Contact Angle Phenomena *150*
6.2 Important Wetting Geometries *153*
6.2.1 Capillary Rise *153*
6.2.2 Particles at Interfaces *155*
6.2.3 Network of Fibers *156*
6.3 Measurement of Contact Angles *158*
6.3.1 Experimental Methods *158*
6.3.2 Hysteresis in Contact Angle Measurements *159*
6.3.3 Surface Roughness and Heterogeneity *161*
6.3.4 Superhydrophobic Surfaces *163*
6.4 Dynamics of Wetting and Dewetting *164*
6.4.1 Spontaneous Spreading *164*
6.4.2 Dynamic Contact Angle *166*
6.4.3 Coating and Dewetting *170*
6.5 Applications *172*
6.5.1 Flotation *172*
6.5.2 Detergency *173*
6.5.3 Microfluidics *174*
6.5.4 Electrowetting *176*
6.6 Thick Films: Spreading of One Liquid on Another *176*
6.7 Summary *179*
6.8 Exercises *179*

7 Solid Surfaces *181*
7.1 Introduction *181*
7.2 Description of Crystalline Surfaces *182*
7.2.1 Substrate Structure *182*
7.2.2 Surface Relaxation and Reconstruction *184*
7.2.3 Description of Adsorbate Structures *186*
7.3 Preparation of Clean Surfaces *187*
7.3.1 Thermal Treatment *187*
7.3.2 Plasma or Sputter Cleaning *188*

7.3.3 Cleavage *189*
7.3.4 Deposition of Thin Films *189*
7.4 Thermodynamics of Solid Surfaces *190*
7.4.1 Surface Energy, Surface Tension, and Surface Stress *190*
7.4.2 Determining Surface Energy *193*
7.4.3 Surface Steps and Defects *196*
7.5 Surface Diffusion *198*
7.5.1 Theoretical Description of Surface Diffusion *199*
7.5.2 Measurement of Surface Diffusion *202*
7.6 Solid–Solid Interfaces *205*
7.7 Microscopy of Solid Surfaces *208*
7.7.1 Optical Microscopy *208*
7.7.2 Electron Microscopy *209*
7.7.3 Scanning Probe Microscopy *211*
7.8 Diffraction Methods *214*
7.8.1 Diffraction Patterns of Two-Dimensional Periodic Structures *214*
7.8.2 Diffraction with Electrons, X-Rays, and Atoms *216*
7.9 Spectroscopic Methods *218*
7.9.1 Optical Spectroscopy of Surfaces *218*
7.9.2 Spectroscopy Using Mainly Inner Electrons *222*
7.9.3 Spectroscopy with Outer Electrons *224*
7.9.4 Secondary Ion Mass Spectrometry *225*
7.10 Summary *226*
7.11 Exercises *227*

8 Adsorption *229*
8.1 Introduction *229*
8.1.1 Definitions *229*
8.1.2 Adsorption Time *231*
8.1.3 Classification of Adsorption Isotherms *232*
8.1.4 Presentation of Adsorption Isotherms *234*
8.2 Thermodynamics of Adsorption *235*
8.2.1 Heats of Adsorption *235*
8.2.2 Differential Quantities of Adsorption and Experimental Results *237*
8.3 Adsorption Models *239*
8.3.1 Langmuir Adsorption Isotherm *239*
8.3.2 Langmuir Constant and Gibbs Energy of Adsorption *241*
8.3.3 Langmuir Adsorption with Lateral Interactions *242*
8.3.4 BET Adsorption Isotherm *243*
8.3.5 Adsorption on Heterogeneous Surfaces *246*
8.3.6 Potential Theory of Polanyi *247*
8.4 Experimental Aspects of Adsorption from Gas Phase *249*
8.4.1 Measuring Adsorption to Planar Surfaces *249*
8.4.2 Measuring Adsorption to Powders and Textured Materials *251*
8.4.3 Adsorption to Porous Materials *253*

8.4.4 Special Aspects of Chemisorption *260*
8.5 Adsorption from Solution *261*
8.6 Summary *263*
8.7 Exercises *264*

9 Surface Modification *267*
9.1 Introduction *267*
9.2 Physical and Chemical Vapor Deposition *268*
9.2.1 Physical Vapor Deposition *268*
9.2.2 Chemical Vapor Deposition *271*
9.3 Soft Matter Deposition *275*
9.3.1 Self-Assembled Monolayers *275*
9.3.2 Physisorption of Polymers *279*
9.3.3 Polymerization on Surfaces *282*
9.3.4 Plasma Polymerization *285*
9.4 Etching Techniques *287*
9.5 Lithography *292*
9.6 Summary *295*
9.7 Exercises *296*

10 Friction, Lubrication, and Wear *297*
10.1 Friction *297*
10.1.1 Introduction *297*
10.1.2 Amontons' and Coulomb's Law *298*
10.1.3 Static, Kinetic, and Stick-Slip Friction *300*
10.1.4 Rolling Friction *302*
10.1.5 Friction and Adhesion *303*
10.1.6 Techniques to Measure Friction *304*
10.1.7 Macroscopic Friction *306*
10.1.8 Microscopic Friction *307*
10.2 Lubrication *310*
10.2.1 Hydrodynamic Lubrication *310*
10.2.2 Boundary Lubrication *313*
10.2.3 Thin-Film Lubrication *314*
10.2.4 Superlubricity *315*
10.2.5 Lubricants *317*
10.3 Wear *318*
10.4 Summary *321*
10.5 Exercises *322*

11 Surfactants, Micelles, Emulsions, and Foams *323*
11.1 Surfactants *323*
11.2 Spherical Micelles, Cylinders, and Bilayers *327*
11.2.1 Critical Micelle Concentration *327*
11.2.2 Influence of Temperature *329*
11.2.3 Thermodynamics of Micellization *330*

11.2.4 Structure of Surfactant Aggregates *332*
11.2.5 Biological Membranes *334*
11.3 Macroemulsions *336*
11.3.1 General Properties *336*
11.3.2 Formation *339*
11.3.3 Stabilization *340*
11.3.4 Evolution and Aging *344*
11.3.5 Coalescence and Demulsification *346*
11.4 Microemulsions *347*
11.4.1 Size of Droplets *347*
11.4.2 Elastic Properties of Surfactant Films *348*
11.4.3 Factors Influencing the Structure of Microemulsions *350*
11.5 Foams *352*
11.5.1 Classification, Application, and Formation *352*
11.5.2 Structure of Foams *353*
11.5.3 Soap Films *355*
11.5.4 Evolution of Foams *357*
11.6 Summary *358*
11.7 Exercises *359*

12 Thin Films on Surfaces of Liquids *361*
12.1 Introduction *361*
12.2 Phases of Monomolecular Films *364*
12.3 Experimental Techniques to Study Monolayers *367*
12.3.1 Optical Microscopy *368*
12.3.2 Infrared and Sum Frequency Generation Spectroscopy *369*
12.3.3 X-Ray Reflection and Diffraction *370*
12.3.4 Surface Potential *373*
12.3.5 Rheologic Properties of Liquid Surfaces *376*
12.4 Langmuir–Blodgett Transfer *381*
12.5 Summary *383*
12.6 Exercises *384*

13 Solutions to Exercises *387*

14 Analysis of Diffraction Patterns *413*
14.1 Diffraction at Three-Dimensional Crystals *413*
14.1.1 Bragg Condition *413*
14.1.2 Laue Condition *414*
14.1.3 Reciprocal Lattice *415*
14.1.4 Ewald Construction *417*
14.2 Diffraction at Surfaces *417*
14.3 Intensity of Diffraction Peaks *419*

Appendix A Symbols and Abbreviations *423*

References *429*
