TABLE OF CONTENTS

Foreword by Bernd-Joachim Ertelt. and. Eduard Gaugler 9

Introduction 15

Chapter 1. The decision situation in an economic approach 21

1.1. The evolution of the concept of a decision situation 22

1.1.1. The decision situation as an ordered triple 28

1.1.2. The decision situation as an ordered quadruple 33

1.1.3. The decision situation as an ordered 5-tuple 35

1.2. The decision in the approach of game theory and behavioral economics 37

1.2.1. Behavioral economics as a theoretical approach and its methodological proposal for the economic sciences 38

1.2.2. The decision as human behavior from the perspective of the axioms of game theory 42

Chapter 2. Optimality of the decision to invest in searching for new information 49

2.1. The situation of seeking new information 49

2.1.1. Searching for new information as a communication model: signal source – the decision maker 50

2.1.2. Source signals in a dynamic decision situation 50

2.1.3. The decision maker as a receiver system – as a perceptual-transformational mental system 51

2.1.4. The communication channel 52

2.1.5. The informational process and informational activity 52

2.1.6. Reliable and unreliable information in a dynamic decision situation 54

2.2. The problem of decision related to investing in the search for new information 56

2.2.1. Criteria for optimal decisions related to investing in the search for new economic information 59

2.2.2. The optimal decision related to investing in the purchase of new economic information, from the perspective of the extreme criteria 61

2.2.3 The optimal decision related to investing in the purchase of new economic information, from the persective of criteria concerning the subjective weight 67

2.2.4 The optimal decision related to investing in the purchase of new economic information, from the perspective of expectational criteria 72

2.2.5. Comparison of the decision criteria in the analysis of optimality in seeking new information 75

Chapter 3 Behavioral methods of research into finding new information in a dynamic decision situation 77
3.1. Selected descriptive and normative models in planning research on economic behavior in a situation of seeking new information 78
3.1.1. Normative models 79
3.1.2. Descriptive models 87
3.2. Systematization of research on seeking for new information in decision situations 89
3.3. Research techniques with an unreliable source of information and the most common patterns of decision analysis in such situations 96
3.3.1. Classic techniques 97
3.3.2. Psychophysical schemes and signal detection 98
3.3.3. Laboratory experiments and their most frequent patterns of decision analysis 99
3.3.4. Experiments investigating the so-called deferred decision 101
3.3.5. Natural experiments, quasi-natural and simulated situations of searching for information in economic decisions 102
3.4. Research results on seeking new information desired in a dynamic decision situation 103
3.4.1. General rules concerning the informational process in a decision-making situation 103
3.4.2. Results of studies on the search for new reliable information 107
3.4.3. Cognitive fallacies (biases) arising from the limited rationality of the decision-maker 110
3.4.4. The problem of the number of informational cycles in the light of experimental studies 120
3.4.5. Critical remarks concerning the research on the information-seeking activity in a dynamic decision-making situation 129

Chapter 4. Two new variants of the optimal probabilistic model of the sequential search for probabilistic information in a dynamic decision-making situation 133
4.1.Experimental decision-making game as an empirical model for seeking new probabilistic information in dynamic decision-making situations 133
4.1.1. Description of a decision-making experimental game: the preparatory phase 134
4.1.2. The key part of the experiment 138
4.1.3. The payoff matrix in the experiment and the method of testing 140
4.2. Normative decision-making model of the sequential search for new probabilistic information 140
4.2.1. The basic decision-making problem of the experimental game participant 141

4.2.2. Posing the problem of the decision to start and continue the investment activity to find new probabilistic information 142
4.2.3. The value of unreliable information 144
4.2.4. The cognitive decision in processing signals into probabilistic information (transformational decision) 151
4.2.5. The scheme of decisions designating the informational activity 153
4.3. Combinatorial model of decision-making concerning a purchase of probabilistic information 155
4.4. Application of the combinatorial model of decision-making concerning a purchase of probabilistic information 159

Chapter 5. A proposal to integrate the concepts of information, decision, mass and energy: a behavioral approach 167
5.1. The concept of mass and energy in physics 169
5.2. The notion of information by Shannon and Weaver and by Szaniawski 170
5.2.1. Information in information theory 171
5.2.2. The pragmatic value of information 173
5.2.3. The relationship between the Shannon's and the Szaniawski's concepts of information 175
5.3. The concept of information understood as energy 176
5.4. The concepts of act and potency, and their usefulness in science 177
5.5. Theoretical and observational terms in the empirical sciences 179
5.6. Mass as potential energy 180
5.7. Energy as an act of a re-arrangement of the material and behavioral potentiality 181
5.8. The ontic-behavioral status of a scientific fact in energetics 182
5.9. The information equation 183
5.10. Concluding remarks on the integration of concepts of information, decision, mass and energy 189
6. Conclusions 191
Literature 195
