Preface to the Second Edition, ix

Reviews of the First Edition, x

Acknowledgments and Dedication, xi

About the Companion Website, xii

## Introduction, 1

### 1 Overview of Cancer Biology, 3

*Michael Khan and Stella Pelengaris*

Introduction, 5

Cancer incidence and epidemiology, 8

Towards a definition of cancer, 8

Causes of cancer, 16

Cancer is a genetic disease, 21

Cancers (and Darwin's finches) evolve by mutation and natural selection, 21

Blame the parents – inherited single gene defects and susceptibility to cancer, 21

The cancer “roadmap” – What kinds of genes are epimutated in cancer?, 23

Viruses and the beginnings of cancer biology, 25

Hens and teeth or bears and woods? The hens have it – cancer is rare, 25

The barriers to cancer, 25

What is the secret of cancer developme ... “timing”, 28

Location, location, location – the cancer environment: nanny or spartan state, 28

Cancer goes agricultural, 29

Cancer superhighways – blood vessels and lymphatics, 31

On your bike and turn the lights off before you go, 31

Catching cancer, 31

Hammering the hallmarks, 32

Painting a portrait of cancer, 33

The drugs don't work, 34

Mechanism of origin rather than cell of origin – towards a new functional taxonomy of cancer, 35

Is it worth it?, 36

Conclusions and future directions, 36

Bibliography, 37

Appendix 1.1 History of cancer, 40

### 2 The Burden of Cancer, 43

*William P. Steward and Anne L. Thomas*

Introduction, 43

Lung cancer, 45

Breast cancer, 49

Colorectal cancer, 53

Carcinoma of the prostate, 56

Renal carcinoma, 57

Skin cancer, 58

Carcinoma of the cervix, 60

Hematological malignancies, 60

Conclusions and future directions, 63

Outstanding questions, 63

Bibliography, 64

Questions for student review, 66

### 3 Nature and Nurture in Oncogenesis, 67

*Michael Khan and Stella Pelengaris*

Introduction, 69

Risk factors, 73

Preventing cancers, 76

Cancer genetics – in depth, 78

Cancer genomics, 87

Gene–environment interactions, 89

Mutations and treatment, 89

Chemoprevention of cancer, 90

Risk factors act in combination, 90

Environmental causes of cancer, 93

The clinical staging and histological examination of cancer, 101

Screening and biomarkers, 102

Somatic gene mutations, epigenetic alterations and multistage tumorigenesis, 105

Conclusions and future directions, 107

Outstanding questions, 107

Bibliography, 107

Questions for student review, 109

### 4 DNA Replication and the Cell Cycle, 111

*Stella Pelengaris and Michael Khan*

Introduction, 112

The cell cycle – overview, 114

Phases of the cell cycle, 120

The cell-cycle engine: cyclins and kinases, 123

Regulation by degradation, 126

Regulation by transcription, 129

MicroRNAs and the cell cycle, 131

Chromatin, 131

DNA replication and mitosis, 131

Checkpoints – putting breaks on the cell-cycle engine, 135

The DNA damage response (DDR), 136

The checkpoints, 136  
Cell-cycle entry and its control by extracellular signals, 138  
Changes in global gene expression during the cell cycle, 139  
Cell cycle and cancer, 139  
Drugging the cell cycle in cancer therapies, 141  
Conclusions and future directions, 142  
Outstanding questions, 143  
Bibliography, 143  
Questions for student review, 144

## **5 Growth Signaling Pathways and the New Era of Targeted Treatment of Cancer, 146**

*Stella Pelengaris and Michael Khan*

Introduction, 147  
Growth factor regulation of the cell cycle, 150  
Growth homeostasis and tissue repair and regeneration, 151  
Regulated and deregulated growth, 155  
Cellular differentiation, 157  
Tissue growth and the “angiogenic switch”, 158  
Cancers and nutrients, 158  
Growth factor signaling pathways, 160  
A detailed description of signal transduction pathways and their subversion in cancer, 160  
Translational control and growth, 184  
Conclusions and future directions, 185  
Outstanding questions, 185  
Bibliography, 186  
Questions for student review, 187

## **6 Oncogenes, 188**

*Stella Pelengaris and Michael Khan*

Introduction, 189  
The oncogenes, 189  
The discovery of oncogenes ushers in the new era of the molecular biology of cancer, 191  
Overview of oncogenes, 191  
Types of oncogenes, 193  
Oncogene collaboration – from cell culture to animal models, 199  
The *c-MYC* oncogene, 199  
The RAS superfamily, 213  
SRC – the oldest oncogene, 228  
BCR–ABL and the Philadelphia chromosome, 232  
The BCL-2 family, 235  
Biologically targeted therapies in cancer and the concept of “oncogene addiction”, 235  
Conclusions and future directions, 235  
Outstanding questions, 236  
Bibliography, 236  
Questions for student review, 238

## **7 Tumor Suppressors, 239**

*Martine F. Roussel*

Introduction, 239  
The “two-hits” hypothesis: loss of heterozygosity (LOH), 240

Haploinsufficiency in cancer, 240  
Epigenetic events, 242  
Definition of a tumor suppressor, 242  
The retinoblastoma protein family, 242  
p53/TP53, 250  
INK4a/ARF, 254  
The p53 and RB pathways in cancer, 257  
Senescence and immortalization: Role of RB and p53, 258  
Tumor suppressors and the control of cell proliferation, 258  
Tumor suppressors and control of the DNA damage response and genomic stability, 260  
The microRNAs and tumor suppressors, 260  
Conclusions and future directions, 263  
Acknowledgments, 263  
Outstanding questions, 264  
Bibliography, 264  
Questions for student review, 265

## **8 Cell Death, 266**

*Stella Pelengaris and Michael Khan*

Introduction, 267  
An historical perspective, 267  
Apoptosis in context, 267  
Apoptosis as a barrier to cancer formation, 271  
Apoptosis versus necrosis, 271  
Cell death by necrosis – not just inflammatory, 272  
The pathways to apoptosis, 272  
The apoptosome – “wheel of death”, 274  
Caspases – the initiators and executioners of apoptosis, 274  
The IAP family – inhibitors of apoptosis and much more, 276  
The central role of MOMP and its regulators in apoptosis – the BCL-2 family, 279  
Mitochondrial outer membrane permeabilization (MOMP), 281  
Endoplasmic reticulum stress, 282  
Stress-inducible heat shock proteins, 282  
Tumor suppressor p53, 282  
Oncogenic stress: MYC-induced apoptosis, 283  
Autophagy – a different kind of cell death and survival, 287  
Cell death in response to cancer therapy, 290  
Exploiting cell death (and senescence) in cancer control, 290  
Conclusions and future directions, 292  
Outstanding questions, 293  
Bibliography, 293  
Questions for student review, 294

## **9 Senescence, Telomeres, and Cancer Stem Cells, 295**

*Maria A. Blasco and Michael Khan*

Introduction, 296  
Senescence, 298  
Conclusions and future directions, 310  
Outstanding questions, 310  
Bibliography, 311  
Questions for student review, 312

**10 Genetic Instability, Chromosomes, and Repair, 314**

*Michael Khan*

- Introduction, 316
- Telomere attrition and genomic instability, 321
- Sensing DNA damage, 323
- Repairing DNA damage, 325
- Checkpoints, 336
- Microsatellites and minisatellites, 343
- Chaperones and genomic instability, 344
- Cancer susceptibility syndromes involving genetic instability, 345
- Genomic instability and colon cancer, 346
- Conclusions and future directions, 346
- Outstanding questions, 347
- Bibliography, 347
- Questions for student review, 349

**11 There Is More to Cancer than Genetics: Regulation of Gene and Protein Expression by Epigenetic Factors, Small Regulatory RNAs, and Protein Stability, 350**

*Stella Pelengaris and Michael Khan*

- Introduction, 351
- The language of epigenetics, 353
- Epigenetics, 353
- Methylation of DNA, 359
- Acetylation of histones and other posttranslational modifications, 360
- Epigenetics and cancer, 362
- CIMP and MIN and the “mutator phenotype”, 365
- Imprinting and loss of imprinting, 366
- Clinical use of epigenetics, 367
- Regulation of translation, 368
- Noncoding RNA and RNA interference, 369
- Therapeutic and research potential of RNAi, 371
- Treatments based on miRNA, 373
- Regulating the proteins, 373
- Therapeutic inhibition of the proteasome, 376
- Receptor degradation, 377
- Wrestling with protein transit – the role of SUMO and the promyelocytic leukemia (PML) body, 377
- Conclusions and future directions, 380
- Outstanding questions, 380
- Bibliography, 381
- Questions for student review, 382

**12 Cell Adhesion in Cancer, 383**

*Charles H. Streuli*

- Introduction, 383
- Adhesive interactions with the extracellular matrix, 384
- Cell–cell interactions, 393
- Critical steps in the dissemination of metastases, 395
- E-cadherin downregulation in cancer leads to migration, 399
- Epithelial–mesenchymal transitions, 401
- Integrins, metalloproteinases, and cell invasion, 402
- Survival in an inappropriate environment, 404

- Conclusions, 406
- Outstanding questions, 406
- Bibliography, 407
- Questions for student review, 409

**13 Tumor Immunity and Immunotherapy, 410**

*Cassian Yee*

- Introduction, 410
- Endogenous immune response, 411
- Effector cells in tumor immunity, 413
- Tumor antigens, 417
- Antigen-specific therapy of cancer, 420
- Clinical trials in vaccine therapy, 422
- Cytokine therapy of cancer, 423
- Tumor immune evasion, 424
- Clinical trials in immunomodulatory therapy, 425
- Conclusions, 425
- Bibliography, 426
- Questions for student review, 427

**14 Tumor Angiogenesis, 429**

*Christiana Ruhrberg*

- Introduction, 429
- General principles of new vessel growth, 430
- Pathological neovascularization: tumor vessels, 430
- Basic concepts in tumor angiogenesis: the angiogenic switch, 432
- Vascular growth and differentiation factors: stimulators of the angiogenic switch, 432
- Role of inhibitors in angiogenesis, 436
- Clinical outcomes and future directions, 436
- Acknowledgments, 437
- Bibliography, 437
- Questions for student review, 437

**15 Cancer Chemistry: Designing New Drugs for Cancer Treatment, 438**

*Ana M. Pizarro and Peter J. Sadler*

- Introduction, 439
- Historical perspective, 439
- The drug discovery process and preclinical development of a drug, 442
- Questions remaining, 457
- Conclusions and future directions, 457
- Bibliography, 458
- Questions for student review, 459

**16 Biologically Targeted Agents from Bench to Bedside, 461**

*Michael Khan, Peter Sadler, Ana M. Pizarro, and Stella Pelengaris*

- Introduction, 463
- Targeted therapies, 465
- Cancer cell heterogeneity, 466
- Finding the molecular targets, 468
- Tumor regression in mice by inactivating single oncogenes, 468
- Targeted cancer therapies, 473
- Targeting oncogenes to treat cancer?, 473

## Contents

The concept of synthetic lethality and collateral vulnerability, 475  
Clinical progress in biological and molecular targeted therapies, 476  
Molecular targeted drugs – an inventory, 479  
DNA damage responses, 490  
Transcription factors, 491  
Targeting epigenetic regulation of gene expression, 492  
Hitting the extrinsic support network and preventing spread, 493  
Gene therapy, antisense, and siRNA, 495  
Resistance to targeted therapies – intrinsic resistance and emergence of secondary pathways and tumor escape, 497  
Negative feedback loops and failure of targeted therapies, 500  
Biomarkers to identify optimal treatments and tailored therapies, 501  
Pharmacogenetics and pharmacogenomics, 505  
Clinical trials in cancer, 506  
Conclusions and future directions, 506  
Bibliography, 507  
Questions for student review, 508

### **17 The Diagnosis of Cancer, 509**

*Anne L. Thomas, Bruno Morgan, and William P. Steward*

Introduction, 509  
Clinical manifestations, 510  
Investigations in oncological practice, 511  
Non-invasive imaging techniques, 516  
Future novel uses of imaging, 521  
Proteomics and microarrays, 523  
Circulating tumor cells, 523  
Disease staging, 523  
Conclusions and future directions, 524  
Bibliography, 524  
Questions for student review, 525

### **18 Treatment of Cancer: Chemotherapy and Radiotherapy, 526**

*Anne L. Thomas, J.P. Sage, and William P. Steward*

Introduction, 526  
Radiotherapy physics, 526  
Radiobiology, 527  
Treatment planning, 528  
Recent advances, 529  
Chemoradiation, 530  
Conclusion, 540  
Bibliography, 542  
Questions for student review, 543

### **19 Caring for the Cancer Patient, 544**

*Nicky Rudd and Esther Waterhouse*

Introduction, 544  
Key concepts, 544  
Communication with the cancer patient, 544  
When is palliative care appropriate for cancer patients?, 545

Palliative care assessment, 545  
Symptom control, 545  
Respiratory symptoms, 547  
Nausea and vomiting, 547  
Bowel obstruction, 548  
Constipation, 549  
Fatigue, 549  
Cachexia and anorexia, 549  
Psychological problems, 549  
The dying patient, 550  
Supportive care, 550  
An example of the care of a cancer patient, 551  
Questions remaining, 551  
Conclusions and future directions, 551  
Underlying problems, 551  
Comment, 551  
Underlying problems, 552  
Bibliography, 552  
Questions for student review, 553

### **20 Systems Biology of Cancer, 554**

*Walter Schubert, Norbert C.J. de Wit, and Peter Walden*

Introduction, 556  
Information flow in cells, 556  
Model organisms and cancer models, 557  
Array-based technologies: genomics, epigenomics, and transcriptomics, 559  
SNPs, the HapMap, and the identification of cancer genes, 559  
Cancer mRNA expression analysis, 562  
CGH arrays, CpG island microarrays, and ChIP-on-Chip, 564  
Next-generation sequencing, 564  
Proteomics, 566  
Posttranslational modifications, 567  
Protein complexes and cellular networks, 569  
Clinical applications of proteomics, 570  
Toponomics: investigating the protein network code of cells and tissues, 571  
Processing the images from the cyclical imaging procedures, 571  
Structure, code, and semantics of the toponome: a high-dimensional combinatorial problem, 573  
Detecting a cell surface protein network code: lessons from a tumor cell, 575  
The molecular face of cells in diseases, 576  
Individualized medicine and tailored therapies, 576  
Discussion and conclusion, 579  
Bibliography, 579  
Internet resources, 581  
Questions for student review, 582  
Appendix 20.1 Techniques for the generation of genetically altered mouse models of cancer, 582

Glossary, 585

Answers to Questions, 597

Index, 603
