## Contents

	Fore	Foreword				
	Ackr	nowledgements	X			
	Int	roduction	1			
	Food	l in the context of sustainable development	1			
	The	objective of duALIne (sustainability of food systems				
faced with new challenges) Scope of the project			2			
			2			
	Orga	anisation of this book	3			
1	Context: new challenges for food systems					
	1.1	Demographics and uncertainties	5			
	1.2	The challenge of global food security	7			
	1.3	Climate change	12			
	1.4	Impacts of food systems on the environment	14			
	1.5	Limited resources: the energy challenge	17			
	1.6	Nutritional trends (accelerated in emerging countries)	19			
	1.7	The health challenge	20			
	1.8	Increased circulation of goods and people	23			
	1.9	Sustainability of the industrial economic model: the				
		vulnerability of low stock level systems	23			
	1.10	A social challenge: the increasing concerns of food consumers	24			
	1.11	Summary	25			
2	Cor	sumption and consumers	27			
	2.1	Characteristics of long-term dietary trends	27			
	2.2	Convergence of food models	31			
	2.3	Bio-physiological bases for the convergence of food models	36			
	2.4	Impact of agricultural policies	43			

	2,5	Changing trends and heterogeneity in consumption:	44			
	2.6	opportunities to control future changes?  Heterogeneity in consumption and nutritional inequalities	46			
	2.6 2.7	Questions for research	48			
	2.7	Questions for research	70			
3	Carbon footprint and nutritional quality of diets					
	in l	France	51			
	3.1	Introduction	51			
	3.2	Quantification of the carbon footprint of diets	53			
	3.3	The choices: carbon footprint and nutritional quality of food	60			
	3.4	Limitations of the study and outlook	64			
	3.5	Conclusion	66			
4	Foo	od systems	69			
	4.1	Introduction	69			
	4.2	Interconnections between food systems and energy and				
		chemical systems	72			
	4.3	The diversity of food systems: evolution and challenges for				
		sustainability	82			
	4.4	Questions for research	98			
_	Ind	ustrial organisation and sustainability	4.0.4			
5	mu	distrial organisation and sustamability	101			
5	5.1	Some important features of changes in the industrial	101			
5			101			
5		Some important features of changes in the industrial				
5	5.1	Some important features of changes in the industrial food system	102			
6	<ul><li>5.1</li><li>5.2</li><li>5.3</li></ul>	Some important features of changes in the industrial food system Consequences of the progress towards sustainability	102 104			
	<ul><li>5.1</li><li>5.2</li><li>5.3</li></ul>	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability  Questions for research	102 104 108			
	5.1 5.2 5.3 <b>Urt</b>	Some important features of changes in the industrial food system Consequences of the progress towards sustainability Questions for research canisation and the sustainability of food systems	102 104 108			
	5.1 5.2 5.3 <b>Urb</b> 6.1	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability  Questions for research  canisation and the sustainability of food systems  Sustainably feeding large cities: a major challenge	102 104 108 115 115			
	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability  Questions for research  canisation and the sustainability of food systems  Sustainably feeding large cities: a major challenge  Urbanisation, food and sustainability: what are the challenges?	102 104 108 115 115 117			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3	Some important features of changes in the industrial food system Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research	102 104 108 115 115 117 128			
6	5.1 5.2 5.3 <b>Urt</b> 6.1 6.2 6.3 <b>Los</b>	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage	102 104 108 115 115 117 128			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3 <b>Los</b> 7.1	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage Introduction	102 104 108 115 115 117 128 136 136			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3 <b>Los</b> 7.1 7.2	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage Introduction What is loss, and what is wastage?	102 104 108 115 115 117 128 136 136 138			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3 <b>Los</b> 7.1 7.2 7.3	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage Introduction What is loss, and what is wastage? Origins and location of losses and wastage in food systems	102 104 108 115 117 128 136 136 138 139			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3 <b>Los</b> 7.1 7.2 7.3 7.4	Some important features of changes in the industrial food system  Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage Introduction What is loss, and what is wastage? Origins and location of losses and wastage in food systems Poor quantification of losses and wastage, North and South	102 104 108 115 117 128 136 136 138 139			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3 <b>Los</b> 7.1 7.2 7.3 7.4	Some important features of changes in the industrial food system Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage Introduction What is loss, and what is wastage? Origins and location of losses and wastage in food systems Poor quantification of losses and wastage, North and South Lessons from the past, courses of action and strategic	102 104 108 115 115 117 128 136 136 138 139 140			
6	5.1 5.2 5.3 <b>Urb</b> 6.1 6.2 6.3 <b>Los</b> 7.1 7.2 7.3 7.4 7.5	Some important features of changes in the industrial food system Consequences of the progress towards sustainability Questions for research  canisation and the sustainability of food systems Sustainably feeding large cities: a major challenge Urbanisation, food and sustainability: what are the challenges? Questions for research  ses and wastage Introduction What is loss, and what is wastage? Origins and location of losses and wastage in food systems Poor quantification of losses and wastage, North and South Lessons from the past, courses of action and strategic orientations	102 104 108 115 115 117 128 136 136 138 139 140			

8	International trade, price volatility and standards				
	for	sustainability	158		
	8.1	Adjusting to the volatility of global prices	159		
	8.2	Management of food price volatility: policies and food			
		sustainability	164		
	8.3	Use of trade policies to cope with price volatility	166		
	8.4	Non-tariff barriers, standards for sustainability	170		
	8.5	Questions for research	172		
	8.6	Conclusion	175		
9	Elements for a foresight debate on food sustainability				
	9.1	Food systems evolving under the effects of various factors	177		
	9.2	Questions of sustainability according to food-eater categories	184		
	9.3	Questions for research	194		
	9.4	Conclusion	197		
10	A critical panorama of methods used to assess food				
	sust	tainability	198		
	10.1	Introduction	198		
	10.2	Complexity of the 'food style' component within			
		an assessment framework	200		
	10.3	Defining the challenges of sustainability before choosing			
		the methods	200		
	10.4	Environmental, social, economic and nutritional methods			
		and indicators	207		
	10.5	Questions for research	222		
	10.6	Conclusion	225		
	Con	clusion	233		
	Knov	wledge acquired and questions for research	233		
	A new look at the controversies		239		
	Which conceptual framework for research methods?		240		
	Viewpoints to be explored, gaps to be filled		242		
	Wha	t are the future prospects?	244
