

# Contents

<b>Chapter 1</b>	<b>Introduction to Compound-specific Isotope Analysis</b>	<b>1</b>
1.1	Development of Stable Isotope Analysis	1
1.2	Instrumentation for SIA	2
1.2.1	Mass Spectrometric Methods for SIA	2
1.2.2	Classification of SIA Techniques	3
1.2.3	Principle of BSIA and CSIA	5
1.3	Historical Development of CSIA by GC- and LC-IRMS	7
1.4	Spectroscopic Methods for SIA	9
1.5	Web Findings	9
	References	10
<b>Chapter 2</b>	<b>Fundamental Aspects of Stable Isotopes and Isotopic Fractionation</b>	<b>14</b>
2.1	The Atom Model and Nuclides	14
2.2	Stable Isotopes	19
2.2.1	Isotope Stability and Abundance	19
2.2.2	Relative Atomic Mass	21
2.2.3	Isotopologues, Isotopomers and Isotopocules	22
2.3	Natural Abundance and How to Express It	24
2.3.1	Isotope-amount Fraction	24
2.3.2	Variations of Natural Isotopic Abundance	25
2.3.3	Isotope Ratios	26
2.3.4	The $\delta$ -Scale and its Limits	27

Published by the Royal Society of Chemistry, [www.rsc.org](http://www.rsc.org)

2.4	Isotope Fractionation and How to Express It	30
2.4.1	Thermodynamic and Kinetic Isotope Effects	30
2.4.2	Isotopic Fractionation Factor, Isotopic Fractionation and Isotopic Difference	32
2.5	Isotope Mass Balances	35
2.6	Physical Kinetic Isotope Fractionation during Transport Processes	36
2.7	Isotopic Fractionation under Various System Conditions	39
2.7.1	Reversible Reaction in a Closed System	40
2.7.2	Irreversible Reaction in a Closed System	42
2.7.3	Reversible Reaction in an Open System	45
2.7.4	Irreversible Reaction in an Open System	45
2.8	Web Findings	46
	References	47
<b>Chapter 3</b>	<b>Instrumentation for Compound-specific Stable Isotope Analysis</b>	<b>50</b>
3.1	Isotope Ratio Mass Spectrometer	50
3.1.1	Vacuum System	53
3.1.2	Ion Source and Focusing Beam Optics	56
3.1.3	Ion Separation in the Magnet Sector Field	63
3.1.4	Ion Collection and Signal Pathway	70
3.1.5	Ion Corrections	77
3.2	Inlet Systems	83
3.2.1	Dual-inlet Systems	83
3.2.2	Continuous-flow Inlet Systems	86
3.2.3	Open-split Systems	86
3.2.4	Reference Gas Inlet	89
3.3	Peripheral Devices for Continuous-flow IRMS	91
3.4	CSIA by GC-IRMS	93
3.4.1	Carbon and Nitrogen Isotope Ratio Analysis	94
3.4.2	Hydrogen Isotope Ratio Analysis	106
3.4.3	Oxygen Isotope Ratio Measurement	115
3.5	Chromatographic Aspects of CSIA	115
3.5.1	Separation Basics	115
3.5.2	Peak Detection in CSIA	127
3.5.3	Carrier Gas, Carrier Gas Flow and GC Columns for CSIA	129
3.5.4	Multidetector	133
3.6	LC-IRMS	134
3.7	Web Findings	147
	References	147

<b>Chapter 4</b>	<b>Sample Preparation in Compound-specific Stable Isotope Analysis</b>	<b>155</b>
4.1	Scope	155
4.2	Sampling, Sample Preservation and Storage	155
4.3	Sample Processing	157
4.3.1	General Remarks	157
4.3.2	Sample Processing for Volatile Compounds	159
4.3.3	Sample Processing for Semi-volatile Compounds	161
4.4	Derivatization	168
4.4.1	General Considerations and Corrections	168
4.4.2	Overview of Derivatization Reactions	174
	References	180
<b>Chapter 5</b>	<b>Referencing Strategies and Quality Assurance for Compound-specific Stable Isotope Analysis</b>	<b>185</b>
5.1	Accuracy, Uncertainty, Precision and Error	185
5.2	International Primary Reference Materials and Certified Reference Materials	187
5.2.1	Overview	187
5.2.2	Hydrogen and Oxygen Calibration and Reference Materials	190
5.2.3	Carbon Calibration and Reference Materials	191
5.2.4	Nitrogen Calibration and Reference Materials	197
5.2.5	Sulfur Calibration and Reference Materials	198
5.2.6	Chlorine and Bromine Calibration and Reference Materials	199
5.3	Normalization of Stable Isotope Data	200
5.4	Referencing in CSIA	204
5.5	Repeatability, Reproducibility, Linearity, Stability, Detection Limits and ‘Total Uncertainty’	211
5.6	Quality Assurance (QA) and Quality Control (QC) in CSIA	218
5.7	Web Findings	221

<b>Chapter 6</b>	<b>Applications of Compound-specific Stable Isotope Analysis</b>	<b>230</b>
6.1	Scope	230
6.2	Authenticity of Food and Related Commodities	234
6.2.1	Scope	234
6.2.2	Isotope Fractionation during Carbon Fixation in Photosynthesis	235

6.2.3	Aromas, Flavours and Essential Oils	240
6.2.4	Alcoholic Drinks	249
6.2.5	Honey	253
6.2.6	Juice	254
6.2.7	Oils	256
6.2.8	Natural Stimulants: Cocoa, Coffee, Tea	258
6.3	Forensics	259
6.4	Archaeology	264
6.5	Doping Control	273
6.5.1	Analytical Procedure for Isotope Analysis of Steroids	277
6.5.2	Further Developments	279
6.6	Environmental Science	280
6.6.1	Scope	280
6.6.2	Source Values of Organic Compounds	280
6.6.3	Source Apportionment	283
6.6.4	Use of Isotope Fractionation in Environmental Systems	295
6.6.5	Further Reading	317
6.7	Extraterrestrial Matter	317
6.8	General Conclusions	326
6.9	Web Findings	329
6.9.1	General Links	329
6.9.2	European Isotope Application Projects	330
	References	330
<b>Chapter 7</b>	<b>Further Developments in Compound-Specific Isotope Analysis</b>	<b>349</b>
7.1	Scope	349
7.2	Multidimensional GC (GC-GC), Comprehensive GC (GC×GC)	349
7.3	CSIA by Multicollector Inductively Coupled Plasma Mass Spectrometry	353
7.4	CSIA of Chlorine- and Bromine-Containing Compounds	356
7.5	Position-specific Isotope Ratio Analysis	359
