Preface	ix
Organization of the Material	x
Teaching from the Text	xi
Exercises and Bibliographic Notes	xii
Errors	xiii
Preview of Volume II	xiv
Acknowledgments	xv
Notation	xix
1 ARRAYS AND TREES	1
1.1 Elementary Sorting and Counting	4
1.1.1 Sorting on a Linear Array	5
— Assessing the Performance of the Algorithm	7
— Sorting N Numbers with Fewer Than	
N Processors	10
1.1.2 Sorting in the Bit Model	12
1.1.3 Lower Bounds	18
1.1.4 A Counterexample—Counting	22
1.1.5 Properties of the Fixed-Connection Network Model	29
1.2 Integer Arithmetic	32
1.2.1 Carry-Lookahead Addition	32
1.2.2 Prefix Computations	37
— Segmented Prefix Computations	43
1.2.3 Carry-Save Addition	44

1.2.4	Multiplication and Convolution	48
1.2.5	Division and Newton Iteration ★	55
1.3	Matrix Algorithms	59
1.3.1	Elementary Matrix Products	60
1.3.2	Algorithms for Triangular Matrices	66
1.3.3	Algorithms for Tridiagonal Matrices ★	72
	— Odd-Even Reduction	72
	— Parallel Prefix Algorithms	78
1.3.4	Gaussian Elimination ★	82
1.3.5	Iterative Methods ★	92
	— Jacobi Relaxation	93
	— Gauss-Seidel Relaxation	95
	— Finite Difference Methods	97
	— Multigrid Methods	99
1.4	Retiming and Systolic Conversion	102
1.4.1	A Motivating Example—Palindrome Recognition	103
1.4.2	The Systolic and Semisystolic Models of Computation	103
1.4.3	Retiming Semisystolic Networks	108
1.4.4	Conversion of a Semisystolic Network into a Systolic Network	113
1.4.5	The Special Case of Broadcasting	118
1.4.6	Retiming the Host	119
1.4.7	Design by Systolic Conversion—A Summary	123
1.5	Graph Algorithms	125
1.5.1	Transitive Closure	125
1.5.2	Connected Components	130
1.5.3	Shortest Paths	131
1.5.4	Breadth-First Spanning Trees	132
1.5.5	Minimum-Weight Spanning Trees	136
1.6	Sorting Revisited	139
1.6.1	Odd-Even Transposition Sort on a Linear Array	139
1.6.2	A Simple $\sqrt{N}(\log N + 1)$ -Step Sorting Algorithm	144
1.6.3	A $(3\sqrt{N} + o(\sqrt{N}))$ -Step Sorting Algorithm ★	148
1.6.4	A Matching Lower Bound	151

1.7	Packet Routing	154
1.7.1	Greedy Algorithms	155
1.7.2	Average-Case Analysis of Greedy Algorithms \star	163
	— Routing N Packets to Random Destinations	163
	— Analysis of Dynamic Routing Problems \star	173
1.7.3	Randomized Routing Algorithms \star	178
1.7.4	Deterministic Algorithms with Small Queues	183
1.7.5	An Off-line Algorithm	186
1.7.6	Other Routing Models and Algorithms	197
1.8	Image Analysis and Computational Geometry	200
1.8.1	Component-Labeling Algorithms	201
	— Levaldi's Algorithm \star	202
	— An $O(\sqrt{N})$ -Step Recursive Algorithm	207
1.8.2	Computing Hough Transforms	210
1.8.3	Nearest-Neighbor Algorithms	214
1.8.4	Finding Convex Hulls \star	216
1.9	Higher-Dimensional Arrays \star	222
1.9.1	Definitions and Properties	223
1.9.2	Matrix Multiplication	226
1.9.3	Sorting	229
1.9.4	Packet Routing	232
1.9.5	Simulating High-Dimensional Arrays on Low-Dimensional Arrays	234
1.10	Problems	237
1.11	Bibliographic Notes	272
2	MESHES OF TREES	277
2.1	The Two-Dimensional Mesh of Trees	280
2.1.1	Definition and Properties	280
2.1.2	Recursive Decomposition	282
2.1.3	Derivation from $K_{N,N}$	283
2.1.4	Variations	286
2.1.5	Comparison With the Pyramid and Multigrid	287
2.2	Elementary $O(\log N)$-Step Algorithms	288
2.2.1	Routing	288
2.2.2	Sorting	289

2.2.3	Matrix-Vector Multiplication	291
2.2.4	Jacobi Relaxation	292
2.2.5	Pivoting	294
2.2.6	Convolution	295
2.2.7	Convex Hull \star	296
2.3	Integer Arithmetic \star	298
2.3.1	Multiplication	298
2.3.2	Division and Chinese Remaindering	301
2.3.3	Related Problems	306
	— Iterated Products	306
	— Root Finding	308
2.4	Matrix Algorithms	309
2.4.1	The Three-Dimensional Mesh of Trees	310
2.4.2	Matrix Multiplication	311
2.4.3	Inverting Lower Triangular Matrices	312
2.4.4	Inverting Arbitrary Matrices \star	316
	— Csanky's Algorithm	316
	— Inversion by Newton Iteration	319
2.4.5	Related Problems \star	320
2.5	Graph Algorithms	324
2.5.1	Minimum-Weight Spanning Trees \star	325
2.5.2	Connected Components	338
2.5.3	Transitive Closure	339
2.5.4	Shortest Paths	340
2.5.5	Matching Problems \star	341
2.6	Fast Evaluation of Straight-Line Code \star	354
2.6.1	Addition and Multiplication Over a Semiring	355
2.6.2	Extension to Codes with Subtraction and Division	367
2.6.3	Applications	371
2.7	Higher-Dimensional Meshes of Trees	373
2.7.1	Definitions and Properties	373
2.7.2	The Shuffle-Tree Graph	374
2.8	Problems	378
2.9	Bibliographic Notes	386

3	HYPERCUBES AND RELATED NETWORKS	389
3.1	The Hypercube	392
3.1.1	Definitions and Properties	393
3.1.2	Containment of Arrays	396
	— Higher-Dimensional Arrays	399
	— Non-Power-of-2 Arrays	401
3.1.3	Containment of Complete Binary Trees	404
3.1.4	Embeddings of Arbitrary Binary Trees \star	410
	— Embeddings with Dilation 1 and Load $O(\frac{M}{N} + \log N)$	412
	— Embeddings with Dilation $O(1)$ and Load $O(\frac{M}{N} + 1)$	416
	— A Review of One-Error-Correcting Codes \star	418
	— Embedding $P_{\log N}$ into $H_{\log N}$	427
3.1.5	Containment of Meshes of Trees	430
3.1.6	Other Containment Results	437
3.2	The Butterfly, Cube-Connected-Cycles, and Beneš Network	439
3.2.1	Definitions and Properties	440
3.2.2	Simulation of Arbitrary Networks \star	456
3.2.3	Simulation of Normal Hypercube Algorithms \star	461
3.2.4	Some Containment and Simulation Results	465
3.3	The Shuffle-Exchange and de Bruijn Graphs	473
3.3.1	Definitions and Properties	474
3.3.2	The Diaconis Card Tricks	483
3.3.3	Simulation of Normal Hypercube Algorithms	491
3.3.4	Similarities with the Butterfly $\star \star$	495
3.3.5	Some Containment and Simulation Results	509
3.4	Packet-Routing Algorithms	511
3.4.1	Definitions and Routing Models	513
3.4.2	Greedy Routing Algorithms and Worst-Case Problems	515
	— A General Lower Bound for Oblivious Routing \star	521
3.4.3	Packing, Spreading, and Monotone Routing Problems	524

	— Reducing a Many-to-Many Routing Problem to a Many-to-One Routing Problem	536
	— Reducing a Routing Problem to a Sorting Problem	538
3.4.4	The Average-Case Behavior of the Greedy Algorithm \star	539
	— Bounds on Congestion	542
	— Bounds on Running Time	547
	— Analyzing Non-Predictive Contention-Resolution Protocols	556
3.4.5	Converting Worst-Case Routing Problems into Average-Case Routing Problems	561
	— Hashing	562
	— Randomized Routing	568
3.4.6	Bounding Queue Sizes \star	571
	— Routing on Arbitrary Levelled Networks \star	588
3.4.7	Routing with Combining	591
3.4.8	The Information Dispersal Approach to Routing	598
	— Using Information Dispersal to Attain Fault-Tolerance	604
	— Finite Fields and Coding Theory \star	608
3.4.9	Circuit-Switching Algorithms	612
3.5	Sorting	621
3.5.1	Odd-Even Merge Sort	622
	— Constructing a Sorting Circuit with Depth $\log N(\log N + 1)/2$	628
3.5.2	Sorting Small Sets \star	632
3.5.3	A Deterministic $O(\log N \log \log N)$ -Step Sorting Algorithm $\star \star$	642
3.5.4	Randomized $O(\log N)$ -Step Sorting Algorithms $\star \star$	657
	— A Circuit with Depth $7.45 \log N$ that Usually Sorts	662
3.6	Simulating a Parallel Random Access Machine	697
3.6.1	PRAM Models and Shared Memories	698
3.6.2	Randomized Simulations Based on Hashing	700
3.6.3	Deterministic Simulations Using Replicated Data \star	703
3.6.4	Using Information Dispersal to Improve Performance	709

3.7 The Fast Fourier Transform	711
3.7.1 The Algorithm	711
3.7.2 Implementation on the Butterfly and Shuffle-Exchange Graph	713
3.7.3 Application to Convolution and Polynomial Arithmetic	717
3.7.4 Application to Integer Multiplication * *	722
3.8 Other Hypercubic Networks	730
3.8.1 Butterflylike Networks	730
— The Omega Network	730
— The Flip Network	732
— The Baseline and Reverse Baseline Networks	732
— Banyan and Delta Networks	736
— k -ary Butterflies	739
3.8.2 De Bruijn-Type Networks	739
— The k -ary de Bruijn Graph	741
— The Generalized Shuffle-Exchange Graph	742
3.9 Problems	743
3.10 Bibliographic Notes	777
BIBLIOGRAPHY	785
INDEX	803
Lemmas, Theorems, and Corollaries	804
