Preface.....	xv
Acknowledgments .....	xix

## Section I: Introduction

<b>Chapter 1 Structural equation models: The basics .....</b>	<b>3</b>
Basic concepts .....	4
Latent versus observed variables.....	4
Exogenous versus endogenous latent variables.....	5
The factor analytic model.....	5
The full latent variable model .....	6
General purpose and process of statistical modeling.....	7
The general structural equation model .....	9
Symbol notation.....	9
The path diagram.....	9
Structural equations .....	11
Nonvisible components of a model .....	12
Basic composition.....	12
The formulation of covariance and mean structures.....	14
Endnotes.....	15
<b>Chapter 2 Using the AMOS program .....</b>	<b>17</b>
Working with AMOS Graphics: Example 1.....	18
Initiating AMOS Graphics .....	18
AMOS modeling tools .....	18
The hypothesized model.....	22
Drawing the path diagram .....	23
Understanding the basic components of model 1 .....	31
The concept of model identification .....	33
Working with AMOS Graphics: Example 2.....	35
The hypothesized model.....	35

Drawing the path diagram .....	38
Working with AMOS Graphics: Example 3.....	41
The hypothesized model.....	42
Drawing the path diagram .....	45
Endnotes.....	49

## Section II: Applications in single-group analyses

<b>Chapter 3 Testing for the factorial validity of a theoretical construct (First-order CFA model) .....</b>	<b>53</b>
The hypothesized model.....	53
Hypothesis 1: Self-concept is a four-factor structure.....	54
Modeling with AMOS Graphics .....	56
Model specification .....	56
Data specification .....	60
Calculation of estimates .....	62
AMOS text output: Hypothesized four-factor model.....	64
Model summary .....	65
Model variables and parameters.....	65
Model evaluation.....	66
Parameter estimates.....	67
Feasibility of parameter estimates .....	67
Appropriateness of standard errors.....	67
Statistical significance of parameter estimates.....	68
Model as a whole.....	68
The model-fitting process.....	70
The issue of statistical significance .....	71
The estimation process .....	73
Goodness-of-fit statistics.....	73
Model misspecification.....	84
Residuals .....	85
Modification indices.....	86
Post hoc analyses.....	89
Hypothesis 2: Self-concept is a two-factor structure .....	91
Selected AMOS text output: Hypothesized two-factor model.....	93
Hypothesis 3: Self-concept is a one-factor structure.....	93
Endnotes.....	95
<b>Chapter 4 Testing for the factorial validity of scores from a measuring instrument (First-order CFA model).....</b>	<b>97</b>
The measuring instrument under study .....	98
The hypothesized model.....	98

Modeling with AMOS Graphics ..... 98  
     Selected AMOS output: The hypothesized model ..... 102  
         Model summary ..... 102  
         Assessment of normality ..... 102  
         Assessment of multivariate outliers..... 105  
     Model evaluation..... 106  
         Goodness-of-fit summary ..... 106  
         Modification indices..... 108  
 Post hoc analyses..... 111  
 Model 2 ..... 111  
     Selected AMOS output: Model 2..... 114  
 Model 3 ..... 114  
     Selected AMOS output: Model 3..... 114  
 Model 4 ..... 118  
     Selected AMOS output: Model 4..... 118  
     Comparison with robust analyses based on the  
     Satorra-Bentler scaled statistic..... 125  
 Endnotes..... 127

**Chapter 5 Testing for the factorial validity of scores from a measuring instrument (Second-order CFA model)..... 129**

The hypothesized model..... 130  
 Modeling with AMOS Graphics ..... 130  
     Selected AMOS output: Preliminary model ..... 134  
     Selected AMOS output: The hypothesized model ..... 137  
     Model evaluation..... 140  
         Goodness-of-fit summary ..... 140  
         Model maximum likelihood (ML) estimates..... 141  
 Estimation of continuous versus categorical variables..... 143  
     Categorical variables analyzed as continuous variables ..... 148  
     The issues ..... 148  
     Categorical variables analyzed as categorical variables..... 149  
         The theory..... 149  
         The assumptions..... 150  
         General analytic strategies ..... 150  
 The AMOS approach to analysis of categorical variables..... 151  
     What is Bayesian estimation? ..... 151  
     Application of Bayesian estimation ..... 152

**Chapter 6 Testing for the validity of a causal structure ..... 161**

The hypothesized model..... 161  
 Modeling with AMOS Graphics ..... 162

Formulation of indicator variables .....	163
Confirmatory factor analyses .....	164
Selected AMOS output: Hypothesized model.....	174
Model assessment .....	176
Goodness-of-fit summary .....	176
Modification indices .....	177
Post Hoc analyses.....	178
Selected AMOS output: Model 2.....	178
Model assessment .....	178
Goodness-of-fit summary .....	178
Modification indices.....	179
Selected AMOS output: Model 3.....	180
Model assessment.....	180
Modification indices.....	180
Selected AMOS output: Model 4.....	181
Model Assessment.....	181
Modification indices.....	181
Selected AMOS output: Model 5 assessment.....	182
Goodness-of-fit summary .....	182
Modification indices.....	182
Selected AMOS output: Model 6.....	182
Model assessment.....	182
The issue of model parsimony.....	183
Selected AMOS output: Model 7 (final model) .....	186
Model assessment.....	186
Parameter estimates .....	187
Endnotes.....	194

### Section III: Applications in multiple-group analyses

<b>Chapter 7 Testing for the factorial equivalence of scores from a measuring instrument (First-order CFA model).....</b>	<b>197</b>
Testing for multigroup invariance: The general notion .....	198
The testing strategy.....	199
The hypothesized model.....	200
Establishing baseline models: The general notion.....	200
Establishing the baseline models: Elementary and secondary teachers.....	202
Modeling with AMOS Graphics .....	205
Testing for multigroup invariance: The configural model .....	208

Selected AMOS output: The configural model  
(No equality constraints imposed) ..... 209

Model assessment ..... 212

Testing for measurement and structural invariance: The  
specification process ..... 213

    The manual multiple-group approach ..... 214

    The automated multiple-group approach ..... 217

Testing for measurement and structural invariance:  
Model assessment ..... 221

Testing for multigroup invariance: The measurement model ..... 221

    Model assessment ..... 222

Testing for multigroup invariance: The structural model ..... 228

Endnotes ..... 230

**Chapter 8 Testing for the equivalence of latent  
mean structures (First-order CFA model) ..... 231**

Basic concepts underlying tests of latent mean structures ..... 231

    Estimation of latent variable means ..... 233

        Model identification ..... 233

        Factor identification ..... 234

The hypothesized model ..... 234

    The baseline models ..... 236

Modeling with AMOS Graphics ..... 238

    The structured means model ..... 238

Testing for latent mean differences ..... 238

    The hypothesized multigroup model ..... 238

    Steps in the testing process ..... 238

        Testing for configural invariance ..... 239

        Testing for measurement invariance ..... 239

        Testing for latent mean differences ..... 243

    Selected AMOS output: Model summary ..... 247

    Selected AMOS output: Goodness-of-fit statistics ..... 250

    Selected AMOS output: Parameter estimates ..... 250

        High-track students ..... 250

        Low-track students ..... 254

Endnotes ..... 256

**Chapter 9 Testing for the equivalence of a causal structure ..... 257**

Cross-validation in covariance structure modeling ..... 257

Testing for invariance across calibration and validation samples ..... 259

    The hypothesized model ..... 260

    Establishing a baseline model ..... 262

Modeling with AMOS Graphics .....	266
Testing for the invariance of causal structure using the automated approach .....	266
Selected AMOS output: Goodness-of-fit statistics for comparative tests of multigroup invariance .....	269
The traditional $\chi^2$ difference approach.....	269
The practical CFI difference approach.....	271

## Section IV: Other important applications

### Chapter 10 Testing for construct validity:

<b>The multitrait-multimethod model.....</b>	<b>275</b>
The general CFA approach to MTMM analyses.....	276
Model 1: Correlated traits/correlated methods.....	278
Model 2: No traits/correlated methods.....	285
Model 3: Perfectly correlated traits/freely correlated methods .....	287
Model 4: Freely correlated traits/uncorrelated methods.....	288
Testing for evidence of convergent and discriminant validity:	
MTMM matrix-level analyses .....	288
Comparison of models .....	288
Evidence of convergent validity.....	288
Evidence of discriminant validity .....	290
Testing for evidence of convergent and discriminant validity:	
MTMM parameter-level analyses.....	291
Examination of parameters.....	291
Evidence of convergent validity .....	292
Evidence of discriminant validity .....	294
The correlated uniqueness approach to MTMM analyses.....	294
Model 5: Correlated uniqueness model .....	297
Endnotes.....	301

### Chapter 11 Testing for change over time: The latent growth     **curve model.....**

Measuring change in individual growth over time:	
The general notion .....	304
The hypothesized dual-domain LGC model .....	305
Modeling intraindividual change.....	305
Modeling interindividual differences in change.....	308
Testing latent growth curve models: A dual-domain model .....	309
The hypothesized model.....	309
Selected AMOS output: Hypothesized model.....	314

Testing latent growth curve models: Gender as a time-invariant predictor of change .....	320
Endnotes .....	325

## Section V: Other important topics

<b>Chapter 12 Bootstrapping as an aid to nonnormal data .....</b>	<b>329</b>
Basic principles underlying the bootstrap procedure .....	331
Benefits and limitations of the bootstrap procedure.....	332
Caveats regarding the use of bootstrapping in SEM.....	333
Modeling with AMOS Graphics .....	334
The hypothesized model.....	334
Characteristics of the sample.....	336
Applying the bootstrap procedure .....	336
Selected AMOS output.....	337
Parameter summary .....	337
Assessment of normality.....	339
Statistical evidence of nonnormality .....	340
Statistical evidence of outliers .....	340
Parameter estimates and standard errors.....	342
Sample ML estimates and standard errors.....	342
Bootstrap ML standard errors .....	342
Bootstrap bias-corrected confidence intervals.....	351
Endnote.....	352
<b>Chapter 13 Addressing the issue of missing data.....</b>	<b>353</b>
Basic patterns of incomplete data .....	354
Common approaches to handling incomplete data.....	355
Listwise deletion .....	355
Pairwise deletion.....	356
Single imputation .....	356
The AMOS approach to handling missing data.....	358
Modeling with AMOS Graphics .....	359
The hypothesized model.....	359
Selected AMOS output: Parameter and model summary information .....	361

Selected AMOS output: Parameter estimates ..... 363  
Selected AMOS output: Goodness-of-fit statistics..... 364  
Endnote..... 365  
References ..... 367  
Author Index..... 385  
Subject Index..... 391
