

Contents

PART I. FUNDAMENTAL CONCEPTS

- 1 • Introduction** 3
 - 1.1 A Scientist in Training 3
 - 1.2 Questions of Whether, If, How, and When 5
 - 1.3 Conditional Process Analysis 9
 - 1.4 Correlation, Causality, and Statistical Modeling 15
 - 1.5 Statistical Software 18
 - 1.6 Overview of This Book 20
 - 1.7 Chapter Summary 21

- 2 • Simple Linear Regression** 23
 - 2.1 Correlation and Prediction 24
 - 2.2 The Simple Linear Regression Equation 29
 - 2.3 Statistical Inference 43
 - 2.4 Assumptions for Interpretation and Statistical Inference 52
 - 2.5 Chapter Summary 57

- 3 • Multiple Linear Regression** 59
 - 3.1 The Multiple Linear Regression Equation 60
 - 3.2 Partial Association and Statistical Control 66
 - 3.3 Statistical Inference in Multiple Regression 75
 - 3.4 Statistical and Conceptual Diagrams 78
 - 3.5 Chapter Summary 82

PART II. MEDIATION ANALYSIS

- 4 • The Simple Mediation Model** 85
 - 4.1 The Simple Mediation Model 86
 - 4.2 Estimation of the Direct, Indirect, and Total Effects of X 90
 - 4.3 Example with Dichotomous X: The Influence of Presumed Media Influence 93
 - 4.4 Statistical Inference 100
 - 4.5 An Example with Continuous X: Economic Stress among Small-Business Owners 117
 - 4.6 Chapter Summary 122

5 • Multiple Mediator Models	123
5.1 The Parallel Multiple Mediator Model	125
5.2 Example Using the Presumed Media Influence Study	130
5.3 Statistical Inference	137
5.4 The Serial Multiple Mediator Model	143
5.5 Complementarity and Competition among Mediators	156
5.6 OLS Regression versus Structural Equation Modeling	159
5.7 Chapter Summary	162
6 • Miscellaneous Topics in Mediation Analysis	165
6.1 What about Baron and Kenny?	166
6.2 Confounding and Causal Order	172
6.3 Effect Size	184
6.4 Multiple Xs or Ys: Analyze Separately or Simultaneously?	193
6.5 Reporting a Mediation Analysis	198
6.6 Chapter Summary	202
 PART III. MODERATION ANALYSIS	
7 • Fundamentals of Moderation Analysis	207
7.1 Conditional and Unconditional Effects	211
7.2 An Example: Sex Discrimination in the Workplace	219
7.3 Visualizing Moderation	231
7.4 Probing an Interaction	234
7.5 Chapter Summary	244
8 • Extending Moderation Analysis Principles	245
8.1 Moderation Involving a Dichotomous Moderator	246
8.2 Interaction between Two Quantitative Variables	254
8.3 Hierarchical versus Simultaneous Entry	268
8.4 The Equivalence between Moderated Regression Analysis and a 2 × 2 Factorial Analysis of Variance	271
8.5 Chapter Summary	280
9 • Miscellaneous Topics in Moderation Analysis	281
9.1 Truths and Myths about Mean Centering	282
9.2 The Estimation and Interpretation of Standardized Regression Coefficients in a Moderation Analysis	290
9.3 Artificial Categorization and Subgroups Analysis	298
9.4 More Than One Moderator	300
9.5 Reporting a Moderation Analysis	315
9.6 Chapter Summary	320
 PART IV. CONDITIONAL PROCESS ANALYSIS	
10 • Fundamentals of Conditional Process Analysis	325
10.1 Examples of Conditional Process Models in the Literature	329
10.2 Conditional Direct and Indirect Effects	333

10.3	Example: Hiding Your Feelings from Your Work Team	338
10.4	Statistical Inference	348
10.5	Conditional Process Analysis in PROCESS	353
10.6	Chapter Summary	354
11	• Further Examples of Conditional Process Analysis	357
11.1	Revisiting the Sexual Discrimination Study	358
11.2	Moderation of the Direct and Indirect Effects in a Conditional Process Model	368
11.3	Visualizing the Direct and Indirect Effects	378
11.4	Mediated Moderation	381
11.5	Chapter Summary	389
12	• Miscellaneous Topics in Conditional Process Analysis	391
12.1	A Strategy for Approaching Your Analysis	393
12.2	Can a Variable Simultaneously Mediate and Moderate Another Variable's Effect?	399
12.3	Comparing Conditional Indirect Effects and a Formal Test of Moderated Mediation	402
12.4	The Pitfalls of Subgroups Analysis	407
12.5	Writing about Conditional Process Modeling	412
12.6	Chapter Summary	415
Appendices		
A	Using PROCESS	419
B	Monte Carlo Confidence Intervals in SPSS and SAS	457
