Foreword ix

## Physiography

1. The catchment area, a geographical review, by H. Nagl 3
  - 1.1 Geomorphological development 3
  - 1.2 Soils 8
  - 1.3 Climate 10
  - 1.4 The present cultivated landscape 11
  - 1.5 Soil exploitation 13
  - 1.6 Tourist traffic 14
  - 1.7 Future prospects 16
  
2. The hydrogeology of Neusiedlersee and its catchment area, by T. Gattinger 21
  - 2.1 The boundaries of the hydrogeologic catchment area 21
  - 2.2 The geological formations of the catchment area and the permeability of their lithologies 23
  - 2.3 Hydrogeologic conditions in the different parts of the recharge area 24
  - 2.4 The magnitude of the groundwater recharge to the basin 28
  - 2.5 The groundwater discharge in the lake 29
  
3. Origin and geohistorical evolution, by H. Löffler 33
  
4. Morphology and morphometry, by H. Löffler 43
  
5. Climatic conditions, by H. Dobesch and F. Neuwirth 47
  - 5.1 General climatic conditions of the Neusiedlersee region 47
  - 5.2 The individual components of the climate and their specific pattern in the lake region 49
  - 5.3 The local climate in the reed belt 61
  
6. Evaporation, by H. Dobesch and F. Neuwirth 65
  - 6.1 Methods for determining evaporation 66
  - 6.2 Comparison of methods 75
  
7. Water balance, by H. Dobesch and F. Neuwirth 79
  - 7.1 Introduction 79
  - 7.2 A historical survey of important events connected with the water level of the lake 79
  - 7.3 Special problems connected with determining the water budget 80
  - 7.4 Quantitative data concerning the water budget of the lake 83

8. Currents, by M. Jungwirth	85
9. The hydrochemical problem, by F. Berger and F. Neuhuber	89
9.1 Surface inflow and the lake water	90
10. Phosphorus and nitrogen, by F. Neuhuber, H. Brossmann and P. Zahradnik	101
10.1 Introduction	101
10.2 The inflows	103
10.3 The uppermost sediment layers	105
10.4 The lake water	108
11. Oxygen conditions, by F. Neuhuber and L. Hammer	121
12. Sediments, by A. Preisinger	131
12.1 Sediment samples	131
12.2 Origin of the sediment layers	132
12.3 Location of the sediment layers	136
13. The superficial sediments: their characterization and distribution, by M. Jungwirth	139
14. Electron microscopic investigations of the mud sediments, by E. Schroll	145
14.1 Introduction	145
14.2 Investigations using scanning electron microscopy (SEM)	145
14.3 Investigations using transmission electron microscopy (TEM)	146
14.4 Conclusion	148
15. Optical properties, colour and turbidity, by M. Dokulil	151
15.1 Surface incident radiation	151
15.2 Underwater light attenuation	151
15.3 Secchi disc visibility	160
15.4 Colour of the lake	162
15.5 Turbidity	162
 <b>Biology, ecology and production</b>	
16. The algal vegetation of Neusiedlersee, by E. Kusel-Fetzmann	171
16.1 Introduction	171
16.2 Algal communities in the lake	172
16.3 Phytoplankton	172
16.4 Phytomicrobenthos	173
16.5 Periphyton	174
16.6 Periodic changes in the algal vegetation	176
16.7 Systematic enumeration	176

17. Seasonal pattern of phytoplankton, by M. Dokulil	203
17.1 Introduction and methods	203
17.2 Species composition	205
17.3 Seasonal succession of species	209
17.4 Total biomass	216
17.5 Chlorophyll-a	220
17.6 Phytoplankton biomass versus chlorophyll-a	221
17.7 Horizontal distribution	225
17.8 Species diversity	225
18. Phytoplankton primary production, by M. Dokulil	233
19. Submerged macrophytes in the open lake. Distribution pattern, production and long term changes, by F. Schiemer	235
19.1 Introduction	235
19.2 Composition of the submerged macrophyte vegetation	235
19.3 Biological characteristics of <i>Myriophyllum spicatum</i> and <i>Potamogeton pectinatus</i>	236
19.4 Distribution pattern of <i>M. spicatum</i> and <i>P. pectinatus</i>	239
19.5 Biomass	240
19.6 Long-term changes in macrophyte belt	244
19.7 Ecological factors governing the growth of macrophytes in Neusiedlersee	245
19.8 Role of submerged macrophytes within the ecosystem of the open lake	247
20. The primary producers of the <i>Phragmites</i> belt, their energy utilization and water balance, by K. Burian and H. Sieghardt	251
20.1 Vegetation conditions and production zones of the reed belt	251
20.2 Production	257
20.3 Energy utilization	262
20.4 Production conditions of <i>Carex riparia</i> Curt.	269
21. Production of <i>Utricularia vulgaris</i> L., by R. Maier	273
21.1 Production of <i>Utricularia</i> in the reedless areas	274
21.2 The production of <i>Utricularia</i> in the zone exposed to fluctuating water conditions	276
22. The zooplankton of the open lake, by A. Herzig	281
22.1 Introduction	281
22.2 Species composition and abundance of rotifers	282
22.3 Species composition and abundance of crustaceans	291
22.4 Horizontal and vertical distribution of crustaceans	308
22.5 A comparison for the last 25 years	312

22.6	Production estimates for the main species: <i>Arctodiaptomus spinosus</i> and <i>Diaphanosoma brachyurum</i>	316
22.7	A comparison of the phytoplankton–zooplankton relationship in deep stratified and shallow lakes	325
23.	The benthic community of the open lake, by F. Schiemer	337
23.1	Introduction	337
23.2	Faunistics	337
23.3	Spatial pattern of benthic conditions	344
23.4	The distribution pattern of the fauna	348
23.5	Seasonal dynamics of benthic fauna	354
23.6	Life cycles of predominant species	359
23.7	Biomass	368
23.8	Comparison of benthic biomass and production of various bodies of water within the temperate zone	372
23.9	Trophic relationship	373
24.	<i>Limnocythere inopinata</i> (Baird) (Cytheridae, Ostracoda): its distribution pattern and relation to the superficial sediment of Neusiedlersee, by M. Jungwirth	385
25.	Arthropod communities connected with <i>Phragmites</i> , by G. Imhof	389
26.	The crustacean fauna of the <i>Phragmites</i> belt (Neusiedlersee), by H. Löffler	399
26.1	Introduction	399
26.2	Methods	399
26.3	Species composition	400
26.4	Seasonal aspects of the composition	401
26.5	Synopsis of planktonic and epiphytic microfauna in wetlands	406
27.	The Rotifers of Neusiedlersee, by J. Donner	411
27.1	Discussion	411
28.	Fishes and fishery in Neusiedlersee, by R. Hacker	423
28.1	Introduction	423
28.2	Faunistics and stocking	424
28.3	Growth of Neusiedlersee fish	428
29.	Birds of Neusiedlersee, by F. Böck	439
29.1	Introduction	439
29.2	The open lake	441
29.3	The reed belt and its significance for birds	446
29.4	Migrations and changes of locality	460
29.5	The discussion of production biology	471
30.	Projects involving Neusiedlersee, by F. Sauerzopf	475
	List of plant and animal species	483
	Indices	507
