<b>1</b>	<b>Introduction</b>	1
1.1	Motivation	1
1.2	State of the Art	3
1.3	Goal of the Dissertation	6
1.4	Structure of the Dissertation	7
<b>2</b>	<b>Fundamentals of Continuum Mechanics and Heat Transfer</b>	9
2.1	Kinematics	9
2.2	Stress Measures	11
2.3	Thermo-Mechanical Balance Equations	11
2.3.1	Conservation Laws and Entropy Inequality	11
2.3.2	Strong Formulations	12
2.3.3	Weak Formulations	13
2.4	Dissipation Inequality	14
2.5	Heat Conduction Equation	16
2.6	Summary of Governing Equations for Small Deformation Theory	16
2.7	Thermo-Mechanical Constitutive Equations for Small Deformation Theory	17
2.7.1	Thermo-Elasticity	18
2.7.2	Thermo-Plasticity with Isotropic and Kinematic Hardening	19
2.7.3	Remarks on Thermo-Viscoplasticity	22
2.7.4	Remarks on Damage	23
<b>3</b>	<b>Auxiliaries: Measurement Devices and Finite Element Discretization</b>	25
3.1	Measurement Devices	25
3.1.1	Mechanical Testing System	25
3.1.2	Temperature Measurement Sensors	26
3.2	Finite Element Discretization	27
3.2.1	Residual Equations	27
3.2.2	Linearization	29
3.2.3	Remarks on Thermo-Mechanically Coupled Solution Strategy	30
<b>4</b>	<b>Phenomenological Process Simulation</b>	31
4.1	Experimental Hybrid Forming Process	31
4.2	Mechanical Material Model for the Forming Tool	31
4.2.1	Helmholtz Free Energy	32
4.2.2	Thermodynamic Forces	32

4.2.3	Yield Function and Evolution Equations	32
4.2.4	Thermodynamic Consistency	33
4.2.5	Summary of Constitutive Equations	34
4.3	Implementation of the Mechanical Material Model for the Forming Tool	35
4.4	Parameter Identification for the Mechanical Material Model	37
4.4.1	Strategy for Parameter Identification	37
4.4.2	Material	38
4.4.3	Specimen Geometry	39
4.4.4	Experiments for Parameter Identification	42
4.4.5	Results of Parameter Identification	44
4.4.6	Verification of Material Parameters	46
4.5	Remarks on Thermal Material Model and Heat Conduction Equation	46
4.6	Construction of Finite Element Model for the Hybrid Forming Process	46
4.6.1	Parts and Geometries	47
4.6.2	Materials and Properties	48
4.6.3	Assembly	50
4.6.4	Analysis Procedure and Time Steps	50
4.6.5	Interactions	50
4.6.6	Boundary Conditions and Loads	53
4.6.7	Finite Element Meshes	55
4.7	Overview of Numerical Results	55
4.8	Experimental Validation	57
4.8.1	Temperature Progression in the Workpiece	57
4.8.2	Temperature Progression in the Forming Tool	58
4.8.3	Geometrical Shape of the Workpiece	59
4.9	Discussion of Numerical Results	60
<b>5</b>	<b>Thermo-Mechanical Fatigue Experiments</b>	<b>65</b>
5.1	Lifetime Prediction Concepts	65
5.1.1	Stress-Life Concept	65
5.1.2	Strain-Life Concept	67
5.1.3	Fracture Mechanics Concept	67
5.2	Lifetime Estimation for the Uncoated Hybrid Forming Tool	68
5.2.1	Specimen Geometry	69
5.2.2	Thermo-Mechanical Fatigue Experiments	69
5.2.3	Isothermal Mechanical Fatigue Experiments	70
<b>6</b>	<b>Multiscale Tool Simulation</b>	<b>73</b>
6.1	Multiscale Methods in Computational Mechanics	73
6.2	Prototype Coating System for the Forming Tool	74
6.3	Thermo-Mechanically Coupled Two Scale Framework	76
6.3.1	Macroscopic Thermo-Mechanically Coupled BVP	77
6.3.2	Mesoscopic Thermo-Mechanically Coupled BVP	77
6.3.3	Scale Transitions	78
6.3.4	Mesoscopic Entropy Inequality	79
6.3.5	Considerations on Macroscopic Entropy Inequality	80
6.3.6	Mesoscopic Heat Conduction Equation	81
6.3.7	Considerations on Macroscopic Heat Conduction Equation	81

6.3.8	Constitutive Equations on Mesoscale .....	82
6.3.9	Remarks on Thermal Material Model .....	85
6.3.10	Remarks on Numerical Implementation .....	85
6.4	Numerical Examples .....	86
6.4.1	Coated Steel Volume Element .....	87
6.4.2	Coated Hybrid Forming Tool .....	89
6.5	Parameter Identification for Coating Layers .....	94
6.5.1	Thermal Material Parameters .....	94
6.5.2	Mechanical Material Parameters .....	95
6.5.3	Remarks on Parameter Identification for Coating Layers .....	103
7	<b>Summary and Outlook</b> .....	107
7.1	Summary .....	107
7.2	Outlook .....	108
	<b>References</b> .....	109
