## Part I Introduction

|          |                                |    |
|----------|--------------------------------|----|
| <b>1</b> | <b>Principal–Agent Problem</b> | 3  |
| 1.1      | Problem Formulation            | 3  |
| 1.2      | Further Reading                | 6  |
|          | References                     | 6  |
| <b>2</b> | <b>Single-Period Examples</b>  | 7  |
| 2.1      | Risk Sharing                   | 7  |
| 2.2      | Hidden Action                  | 8  |
| 2.3      | Hidden Type                    | 10 |
| 2.4      | Further Reading                | 14 |
|          | References                     | 14 |

## Part II First Best: Risk Sharing Under Full Information

|          |   |    |
|----------|---|----|
| <b>3</b> | <b>Linear Models with Project Selection, and Preview of Results</b> | 17 |
| 3.1      | Linear Dynamics and Control of Volatility                           | 17 |
| 3.1.1    | The Model   | 17 |
| 3.1.2    | Risk Sharing, First Best Solution                                   | 18 |
| 3.1.3    | Implementing the First Best Solution                                | 20 |
| 3.1.4    | Optimal Contract as a Function of Output                            | 21 |
| 3.1.5    | Examples  | 22 |
| 3.2      | Further Reading   | 24 |
|          | References  | 24 |
| <b>4</b> | <b>The General Risk Sharing Problem</b>                             | 25 |
| 4.1      | The Model and the PA Problem  | 25 |
| 4.2      | Necessary Conditions for Optimality                                 | 26 |
| 4.2.1    | FBSDE Formulation   | 27 |
| 4.2.2    | Adjoint Processes   | 28 |
| 4.2.3    | Main Result   | 28 |

|       |  |    |
|-------|--|----|
| 4.3   | Sufficient Conditions for Optimality . . . . .                             | 30 |
| 4.4   | Optimal Contracts . . . . .  | 31 |
| 4.4.1 | Implementing the First Best Solution . . . . .                             | 31 |
| 4.4.2 | On Uniqueness of Optimal Contracts . . . . .                               | 32 |
| 4.5   | Examples . . . . .   | 34 |
| 4.5.1 | Linear Dynamics . . . . .  | 34 |
| 4.5.2 | Nonlinear Volatility Selection with Exponential Utilities . . . . .        | 35 |
| 4.5.3 | Linear Contracts . . . . .   | 37 |
| 4.6   | Dual Problem . . . . .   | 38 |
| 4.7   | A More General Model with Consumption and Recursive<br>Utilities . . . . . | 40 |
| 4.8   | Further Reading . . . . .  | 43 |
|       | References . . . . .   | 43 |

### **Part III Second Best: Contracting Under Hidden Action—The Case of Moral Hazard**

|          |   |           |
|----------|---|-----------|
| <b>5</b> | <b>Mathematical Theory for General Moral Hazard Problems . . . . .</b>                    | <b>47</b> |
| 5.1      | The Model and the PA Problem . . . . .  | 47        |
| 5.2      | Lipschitz Case . . . . .  | 51        |
| 5.2.1    | Agent's Problem . . . . .   | 51        |
| 5.2.2    | Principal's Problem . . . . .   | 54        |
| 5.2.3    | Principal's Problem Based on Principal's Target Actions . . . . .                         | 57        |
| 5.2.4    | Principal's Problem Based on Principal's Target Actions:<br>Another Formulation . . . . . | 60        |
| 5.3      | Quadratic Case . . . . .  | 64        |
| 5.3.1    | Agent's Problem . . . . .   | 64        |
| 5.3.2    | Principal's Problem . . . . .   | 67        |
| 5.4      | Special Cases . . . . .   | 69        |
| 5.4.1    | Participation Constraint at Time Zero . . . . .   | 69        |
| 5.4.2    | Separable Utility and Participation Constraint at Time<br>Zero . . . . .                  | 72        |
| 5.4.3    | Infinite Horizon . . . . .  | 74        |
| 5.4.4    | HJB Approach in Markovian Case . . . . .  | 76        |
| 5.5      | A More General Model with Consumption and Recursive<br>Utilities . . . . .                | 77        |
| 5.6      | Further Reading . . . . .   | 83        |
|          | References . . . . .  | 84        |
| <b>6</b> | <b>Special Cases and Applications . . . . .</b>   | <b>85</b> |
| 6.1      | Exponential Utilities and Lump-Sum Payment . . . . .                                      | 85        |
| 6.1.1    | The Model . . . . .   | 85        |
| 6.1.2    | Necessary Conditions Derived from the General Theory . . . . .                            | 86        |
| 6.1.3    | A Direct Approach . . . . .   | 90        |
| 6.1.4    | A Solvable Special Case with Quadratic Cost . . . . .                                     | 93        |
| 6.2      | General Risk Preferences, Quadratic Cost, and Lump-Sum<br>Payment . . . . .               | 94        |
| 6.2.1    | The Model . . . . .   | 94        |

- 6.2.2 Necessary Conditions Derived from the General Theory . . . 94
- 6.2.3 A Direct Approach . . . . . 98
- 6.2.4 Example: Risk-Neutral Principal and Log-Utility Agent . . . 100
- 6.3 Risk-Neutral Principal and Infinite Horizon . . . . . 103
  - 6.3.1 The Model . . . . . 103
  - 6.3.2 Necessary Conditions Derived from the General Theory . . . 103
  - 6.3.3 A Direct Approach . . . . . 106
  - 6.3.4 Interpretation and Discussion . . . . . 109
  - 6.3.5 Further Economic Conclusions and Extensions . . . . . 110
- 6.4 Further Reading . . . . . 112
- References . . . . . 113

**7 An Application to Capital Structure Problems: Optimal Financing of a Company . . . . . 115**

- 7.1 The Model . . . . . 115
- 7.2 Agent’s Problem . . . . . 117
- 7.3 Principal’s Problem . . . . . 121
  - 7.3.1 Principal’s Problem Under Participation Constraint . . . . . 121
  - 7.3.2 Properties of the Principal’s Value Function . . . . . 125
  - 7.3.3 Optimal Contract . . . . . 126
- 7.4 Implementation Using Standard Securities . . . . . 129
- 7.5 Comparative Statics . . . . . 130
  - 7.5.1 Example: Agent Owns the Firm . . . . . 131
  - 7.5.2 Computing Parameter Sensitivities . . . . . 131
  - 7.5.3 Some Comparative Statics . . . . . 133
- 7.6 Further Reading . . . . . 134
- References . . . . . 134

**Part IV Third Best: Contracting Under Hidden Action and Hidden Type—The Case of Moral Hazard and Adverse Selection**

- 8 Adverse Selection . . . . . 137**
  - 8.1 The Model and the PA Problem . . . . . 137
    - 8.1.1 Constraints Faced by the Principal . . . . . 138
  - 8.2 Quadratic Cost and Lump-Sum Payment . . . . . 138
    - 8.2.1 Technical Assumptions . . . . . 139
    - 8.2.2 Solution to the Agent’s Problem . . . . . 140
    - 8.2.3 Principal’s Relaxed Problem . . . . . 143
    - 8.2.4 Properties of the Candidate Optimal Contract . . . . . 144
  - 8.3 Risk-Neutral Agent and Principal . . . . . 145
  - 8.4 Controlling Volatility . . . . . 149
    - 8.4.1 The Model . . . . . 149
    - 8.4.2 Main Result: Solving the Relaxed Problem . . . . . 150
    - 8.4.3 Comparison with the First Best . . . . . 152
  - 8.5 Further Reading . . . . . 153
  - References . . . . . 153

**Part V Backward SDEs and Forward-Backward SDEs**

|           |  |     |
|-----------|--|-----|
| <b>9</b>  | <b>Backward SDEs</b>                                 | 157 |
| 9.1       | Introduction   | 157 |
| 9.1.1     | Example: Option Pricing and Hedging                  | 158 |
| 9.2       | Linear Backward SDEs                                 | 159 |
| 9.3       | Well-Posedness of BSDEs                              | 160 |
| 9.4       | Comparison Theorem and Stability Properties of BSDEs | 165 |
| 9.5       | Markovian BSDEs and PDEs                             | 170 |
| 9.5.1     | Numerical Methods                                    | 172 |
| 9.6       | BSDEs with Quadratic Growth                          | 173 |
| 9.7       | Further Reading                                      | 181 |
|           | References   | 181 |
| <b>10</b> | <b>Stochastic Maximum Principle</b>                  | 183 |
| 10.1      | Stochastic Control of BSDEs                          | 183 |
| 10.2      | Stochastic Control of FBSDEs                         | 188 |
| 10.3      | Stochastic Control of High-Dimensional BSDEs         | 195 |
| 10.4      | Stochastic Optimization in Weak Formulation          | 203 |
| 10.4.1    | Weak Formulation Versus Strong Formulation           | 203 |
| 10.4.2    | Sufficient Conditions in Weak Formulation            | 205 |
| 10.4.3    | Necessary Conditions in Weak Formulation             | 211 |
| 10.4.4    | Stochastic Optimization for High-Dimensional BSDEs   | 215 |
| 10.4.5    | Stochastic Optimization for FBSDEs                   | 218 |
| 10.5      | Some Technical Proofs                                | 221 |
| 10.5.1    | Heuristic Derivation of the Results of Sect. 4.7     | 221 |
| 10.5.2    | Heuristic Derivation of the Results of Sect. 5.5     | 222 |
| 10.5.3    | Sketch of Proof for Theorem 5.2.12                   | 224 |
| 10.6      | Further Reading                                      | 226 |
|           | References   | 227 |
| <b>11</b> | <b>Forward-Backward SDEs</b>                         | 229 |
| 11.1      | FBSDE Definition                                     | 229 |
| 11.2      | Fixed Point Approach                                 | 230 |
| 11.3      | Four-Step Scheme—The Decoupling Approach             | 236 |
| 11.4      | Method of Continuation                               | 243 |
| 11.5      | Further Reading                                      | 247 |
|           | References   | 248 |
|           | <b>References</b>                                    | 249 |
|           | <b>Index</b>   | 253 |
