1	Introduction	1
	1.1 Introduction	1
	References	3
2	Foundations of Classical Physics	7
	2.1 State Space, Equation of Motion	7
	2.2 Operation, Mixing, Selection	8
	2.3 Linearity of Non-Selective Operations.	9
	2.4 Measurements	10
	2.4.1 Projective Measurement	10
	2.4.2 Non-Projective Measurement	12
	2.4.3 Weak Measurement, Time-Continuous Measurement.	12
	2.5 Composite Systems.	13
	2.6 Collective System.	15
	2.7 Two-State System (Bit)	15
	2.8 Problems, Exercises	16
	References	17
3	Semiclassical, Semi-Q-Physics	19
	3.1 Problems, Exercises	20
	References	21
4	Foundations of Q-Physics	23
	4.1 State Space, Superposition, Equation of Motion	23
	4.2 Operation, Mixing, Selection	25
	4.3 Linearity of Non-Selective Operations.	26
	4.4 Measurements	26
	4.4.1 Projective Measurement	27
	4.4.2 Non-Projective Measurement	29
	4.4.3 Weak Measurement, Time-Continuous Measurement.	30

4.4.4	Compatible Physical Quantities	31
4.4.5	Measurement in Pure State	32
4.5	Composite Systems	33
4.6	Collective System	35
4.6.1	Problems, Exercises	36
	References	36
5	Two-State Q-System: Qubit Representations	37
5.1	Computational Representation	37
5.2	Pauli Representation	38
5.2.1	State Space	38
5.2.2	Rotational Invariance	40
5.2.3	Density Matrix	40
5.2.4	Equation of Motion	41
5.2.5	Physical Quantities, Measurement	42
5.3	The Unknown Qubit, Alice and Bob	43
5.4	Relationship of Computational and Pauli Representations	43
5.5	Fock Representation	44
5.6	Problems, Exercises	45
6	One-Qubit Manipulations	47
6.1	One-Qubit Operations	47
6.1.1	Logical Operations	47
6.1.2	Depolarization, Re-Polarization, Reflection	49
6.2	State Preparation, Determination	50
6.2.1	Preparation of Known State, Mixing	50
6.2.2	Ensemble Determination of Unknown State	51
6.2.3	Single State Determination: No-Cloning	52
6.2.4	Fidelity of Two States	53
6.2.5	Approximate State Determination and Cloning	53
6.3	Indistinguishability of Two Non-Orthogonal States	54
6.3.1	Distinguishing Via Projective Measurement	54
6.3.2	Distinguishing Via Non-Projective Measurement	55
6.4	Applications of No-Cloning and Indistinguishability	56
6.4.1	Q-banknote	56
6.4.2	Q-key, Q-Cryptography	57
6.5	Problems, Exercises	59
	References	60
7	Composite Q-System, Pure State	61
7.1	Bipartite Composite Systems	61
7.1.1	Schmidt Decomposition	62
7.1.2	State Purification	62
7.1.3	Measure of Entanglement	63

7.1.4	Entanglement and Local Operations	65
7.1.5	Entanglement of Two-Qubit Pure States	66
7.1.6	Interchangeability of Maximal Entanglements	67
7.2	Q-Correlations History	68
7.2.1	EPR, Einstein Nonlocality 1935.	68
7.2.2	A Non-Existing Linear Operation 1955.	69
7.2.3	Bell Nonlocality 1964.	70
7.3	Applications of Q-Correlations.	73
7.3.1	Superdense Coding.	73
7.3.2	Teleportation	74
7.4	Problems, Exercises	76
	References	76
8	All Q-Operations	79
8.1	Completely Positive Maps	79
8.2	Reduced Dynamics	80
8.3	Indirect Measurement	81
8.4	Non-Projective Measurement Resulting from Indirect Measurement	83
8.5	Entanglement and LOCC.	84
8.6	Open Q-System: Master Equation.	85
8.7	Q-Channels	85
8.8	Problems, Exercises	86
	References	87
