

Part I Methodology

1 Introduction to Stochastic Models in Biology	3
Susanne Ditlevsen and Adeline Samson	
1.1 Introduction	3
1.2 Markov Chains and Discrete-Time Processes	4
1.3 The Wiener Process (or Brownian Motion)	5
1.4 Stochastic Differential Equations	8
1.5 Existence and Uniqueness	13
1.6 Itô's Formula	14
1.7 Monte Carlo Simulations	16
1.7.1 The Euler–Maruyama Scheme	16
1.7.2 The Milstein Scheme	17
1.8 Inference	17
1.8.1 Maximum Likelihood	18
1.8.2 Bayesian Approach	22
1.8.3 Martingale Estimating Functions	23
1.9 Biological Applications	25
1.9.1 Oncology	25
1.9.2 Agronomy	29
References	33
2 One-Dimensional Homogeneous Diffusions	37
Martin Jacobsen	
2.1 Introduction	37
2.2 Diffusion Processes	39
2.3 Scale Function and Speed Measure	40
2.4 Boundary Behavior	45
2.5 Expected Time to Hit a Given Level	54
References	55

3	A Brief Introduction to Large Deviations Theory	57
	Gilles Wainrib	
3.1	Introduction	57
3.2	Sum of Independent Random Variables	58
3.3	General Theory	61
3.4	Some Large Deviations Principles for Stochastic Processes	64
3.4.1	Sanov Theorem for Markov Chains	64
3.4.2	Small Noise and Freidlin–Wentzell Theory	65
3.5	Conclusion	71
	References	71
4	Some Numerical Methods for Rare Events Simulation and Analysis	73
	Gilles Wainrib	
4.1	Introduction	73
4.2	Monte-Carlo Simulation Methods	75
4.2.1	Overview of the Different Approaches	75
4.2.2	Focus on Importance Sampling	78
4.3	Numerical Methods Based on Large Deviations Theory	87
4.3.1	Quasipotential and Optimal Path	87
4.3.2	Numerical Methods	88
4.4	Conclusion	93
	References	95
 Part II Neuronal Models		
5	Stochastic Integrate and Fire Models: A Review on Mathematical Methods and Their Applications	99
	Laura Sacerdote and Maria Teresa Giraudo	
5.1	Introduction	99
5.2	Biological Features of the Neuron	101
5.3	One Dimensional Stochastic Integrate and Fire Models	102
5.3.1	Introduction and Notation	102
5.3.2	Wiener Process Model	103
5.3.3	Randomized Random Walk Model	105
5.3.4	Stein’s Model	106
5.3.5	Ornstein–Uhlenbeck Diffusion Model	107
5.3.6	Reversal Potential Models	112
5.3.7	Comparison Between Different LIF Models	117
5.3.8	Jump Diffusion Models	119
5.3.9	Boundary Shapes	120
5.3.10	Further Models	121
5.3.11	Refractoriness and Return Process Models	122

5.4	Mathematical Methods for the First Passage Time Problem and Their Application to the Study of Neuronal Models....	124
5.4.1	Analytical Methods.....	125
5.4.2	Numerical Methods	133
5.4.3	Simulation Methods	136
5.5	Estimation Problems for LIF Models	139
5.5.1	Samples from Membrane Potential Measures	139
5.5.2	Samples of ISIs	141
	References	142
6	Stochastic Partial Differential Equations in Neurobiology: Linear and Nonlinear Models for Spiking Neurons	149
	Henry C. Tuckwell	
6.1	Introduction	150
6.2	Linear SPDE Neuronal Models: A Brief Summary	151
6.2.1	Geometrical or Anatomical Considerations	152
6.2.2	Simple Linear SPDE Models	155
6.2.3	Two-Component Linear SPDE Systems	159
6.3	Nonlinear Models for Spiking Neurons	160
6.3.1	The Ionic Currents Underlying Neuronal Spiking	160
6.3.2	A General SPDE for Nerve Membrane Potential	161
6.4	Stochastic Spatial Hodgkin–Huxley Model.....	162
6.4.1	Noise-Free Excitation	164
6.4.2	Stochastic Stimulation	165
6.5	A Stochastic Spatial FitzHugh–Nagumo System	168
6.5.1	The Effect of Noise on the Probability of Transmission.....	168
6.6	Discussion	170
	References	171
7	Deterministic and Stochastic FitzHugh–Nagumo Systems	175
	Michèle Thieullen	
7.1	Introduction	175
7.2	FN Systems of ODEs	177
7.3	Large Deviations	178
7.4	Stochastic Perturbation of FN	181
7.5	Deterministic FN Including Space Propagation	182
	References	186
8	Stochastic Modeling of Spreading Cortical Depression	187
	Henry C. Tuckwell	
8.1	Introduction	187
8.2	Reaction–Diffusion Model for Cortical Spreading Depression	189
8.2.1	The Standard Parameter Set	192
8.3	Random Sources of K^+	193
8.3.1	Mainly Uniform K^+ Sources with An Isolated Region of Higher Activity	194

8.4	Reduced Exchange-Pump Capacity Over a Small Lesion	195
8.5	Discussion	197
	References	198
Glossary	201
Index	205
