Preface IX

| | | |
|----------|--|-----------|
| 1 | Fundamentals – Small-Scale Propulsion | 1 |
| 1.1 | Introduction | 1 |
| 1.2 | Nanomachines History | 3 |
| 1.3 | Challenges to Nanoscale Propulsion | 4 |
| 1.4 | Low Reynolds Number Hydrodynamics | 7 |
| | References | 9 |
| 2 | Motion of Natural Nanoswimmers | 13 |
| 2.1 | Introduction | 13 |
| 2.2 | Chemically Powered Motor Proteins | 14 |
| 2.2.1 | Biological Motors: Active Workhorses of Cells | 15 |
| 2.2.2 | Protein Motors: Basic Operation | 16 |
| 2.2.3 | Kinesins | 17 |
| 2.2.3.1 | Function and Structure | 17 |
| 2.2.3.2 | Kinesin Movement | 18 |
| 2.2.4 | Myosins | 19 |
| 2.2.5 | Dyneins | 21 |
| 2.2.6 | Biomotor-based Active Nanoscale Transport in Microchip Devices | 21 |
| 2.3 | Rotary Biomotors | 24 |
| 2.4 | Swimming Microorganisms | 26 |
| 2.4.1 | Bacterial Flagella – <i>Escherichia coli</i> | 27 |
| 2.4.2 | Sperm Motility | 28 |
| 2.4.3 | Cilia-Driven Swimming of <i>Paramecium</i> | 29 |
| 2.4.4 | Bacteria Transporters and Actuators | 30 |
| | References | 31 |
| 3 | Molecular Machines | 35 |
| 3.1 | Stimuli-Responsive Rotaxane, Pseudorotaxane, and Catenane Nanomachines | 37 |
| 3.2 | Molecular Rotary Motors | 43 |

- 3.3 Light-Driven Molecular Machines based on *cis-trans* Photoisomerization 44
 - 3.3.1 Azobenzene-based Nanomachines 45
- 3.4 Nanocars 47
- 3.5 DNA Nanomachines 50
 - 3.5.1 Autonomous Enzyme-Assisted DNA Nanomachines 53
 - 3.5.2 DNA Spiders 54
 - 3.5.3 pH and Light Switchable DNA Machines 55
- References 57

- 4 Self-Propelling Chemically Powered Devices 61**
 - 4.1 Self-Propelling Catalytic Nanowires 63
 - 4.1.1 Propulsion Mechanism of Catalytic Nanowire Motors 67
 - 4.1.2 Magnetically Directed Movement of Catalytic Nanowire Motors 68
 - 4.2 Catalytic Tubular Microengines 69
 - 4.2.1 Bubble-Propulsion Mechanism of Tubular Microengines 71
 - 4.2.2 Preparation of Tubular Microengines 73
 - 4.2.2.1 Rolled-up Fabrication of Tubular Microengines 73
 - 4.2.2.2 Membrane-Template Electrodeposition of Tubular Microengines 75
 - 4.3 Catalytic Janus Microparticles: Spherical Motors 76
 - 4.3.1 Preparation of Catalytic Janus Particle Motors 77
 - 4.3.1.1 Janus Capsule Motors 79
 - 4.3.2 Propulsion Mechanisms of Catalytic Janus Spherical Motors 79
 - 4.4 Controlled Motion of Chemically Powered Nano/Microscale Motors 81
 - 4.4.1 Thermally Controlled Nanomotors 82
 - 4.4.2 Light Control of Catalytic Motors 83
 - 4.4.3 Potential Control of Catalytic Motors 84
 - 4.5 Alternative Fuels for Chemically Powered Micro/Nanoscale Motors 84
 - 4.6 Collective Behavior: Toward Swarming and Chemotaxis 86
 - 4.6.1 Triggered Self-Organization of Microparticles 86
 - 4.6.2 Chemotaxis: Movement along Concentration Gradients 89
 - 4.7 Biocatalytic Propulsion 91
 - 4.8 Motion Based on Asymmetric Release of Chemicals 93
 - 4.9 Polymerization-Induced Motion 95
 - References 95

- 5 Externally Powered Nanomotors–Fuel-Free Nanoswimmers 101**
 - 5.1 Magnetically Driven Nanomotors 101
 - 5.1.1 Helical Propellers 102
 - 5.1.2 Flexible Swimmers 106
 - 5.1.3 Surface Walkers 107
 - 5.1.4 Magnetically Actuated Artificial Cilia Array 109
 - 5.2 Electrically Driven Nanomotors 110
 - 5.2.1 Motion of Miniature Diodes 110

| | | |
|----------|--|------------|
| 5.2.2 | Micromotors Driven by Bipolar Electrochemistry | 110 |
| 5.3 | Ultrasound-Actuated Micromotors | 112 |
| 5.4 | Light-Driven Micromotors | 113 |
| 5.5 | Hybrid Nanomotors | 114 |
| | References | 115 |
| 6 | Applications of Nano/Microscale Motors | 119 |
| 6.1 | Cargo Towing: Toward Drug Delivery | 119 |
| 6.1.1 | Cargo-Loading Schemes | 119 |
| 6.1.2 | Cargo Release Strategies | 122 |
| 6.1.3 | Drug Delivery: Realizing the <i>Fantastic Voyage</i> Vision | 124 |
| 6.2 | Biosensing and Target Isolation | 126 |
| 6.2.1 | Biomotor-Driven Sensing: Toward “Smart Dust” Devices | 126 |
| 6.2.2 | Motion-based Signal Transduction | 128 |
| 6.2.3 | Isolation of Biological Targets: “Swim-Catch-Isolation” | 130 |
| 6.3 | Active Nanoscale Transport by Synthetic Motors in Microchip Devices | 134 |
| 6.4 | Nanomotor-based Surface Patterning and Self-Assembly | 135 |
| 6.5 | Use of Micro/Nanoscale Motors for Environmental Monitoring and Remediation | 137 |
| | References | 138 |
| 7 | Conclusions and Future Prospects | 141 |
| 7.1 | Current Status and Future Opportunities | 141 |
| 7.1.1 | Future Micro/Nanoscale Machines in Medicine | 143 |
| 7.2 | Future Challenges | 144 |
| 7.3 | Concluding Remarks | 146 |
| | References | 147 |
| | Glossary | 149 |
| | Index | 155 |
