## **PART ONE Maximum Likelihood**

<b>1 The Maximum Likelihood Principle</b>	<b>3</b>
1.1 Introduction	3
1.2 Motivating Examples	3
1.3 Joint Probability Distributions	9
1.4 Maximum Likelihood Framework	11
1.4.1 The Log-Likelihood Function	12
1.4.2 Gradient	17
1.4.3 Hessian	19
1.5 Applications	22
1.5.1 Stationary Distribution of the Vasicek Model	23
1.5.2 Transitional Distribution of the Vasicek Model	24
1.6 Exercises	27
<b>2 Properties of Maximum Likelihood Estimators</b>	<b>33</b>
2.1 Introduction	33
2.2 Preliminaries	33
2.2.1 Properties of Stochastic Time Series	34
2.2.2 Weak Law of Large Numbers	38
2.2.3 Rates of Convergence	42
2.2.4 Central Limit Theorems	45
2.3 Regularity Conditions	53
2.4 Properties of the Likelihood Function	54
2.4.1 The Population Likelihood Function	54

2.4.2	Moments of the Gradient	55
2.4.3	The Information Matrix	58
2.5	Asymptotic Properties	60
2.5.1	Consistency	60
2.5.2	Normality	63
2.5.3	Efficiency	65
2.6	Finite-Sample Properties	68
2.6.1	Unbiasedness	69
2.6.2	Sufficiency	70
2.6.3	Invariance	71
2.6.4	Non-Uniqueness	72
2.7	Applications	72
2.7.1	Portfolio Diversification	74
2.7.2	Bimodal Likelihood	76
2.8	Exercises	78
<b>3</b>	<b>Numerical Estimation Methods</b>	<b>87</b>
3.1	Introduction	87
3.2	Newton Methods	88
3.2.1	Newton-Raphson	89
3.2.2	Method of Scoring	90
3.2.3	BHHH Algorithm	92
3.2.4	Comparative Examples	94
3.3	Quasi-Newton Methods	96
3.4	Line Searching	98
3.5	Optimisation Based on Function Evaluation	100
3.6	Computing Standard Errors	101
3.7	Hints for Practical Optimisation	104
3.7.1	Concentrating the Likelihood	104
3.7.2	Parameter Constraints	105
3.7.3	Choice of Algorithm	106
3.7.4	Numerical Derivatives	107
3.7.5	Starting Values	108
3.7.6	Convergence Criteria	108
3.8	Applications	109
3.8.1	Stationary Distribution of the CIR Model	109
3.8.2	Transitional Distribution of the CIR Model	111
3.9	Exercises	112
<b>4</b>	<b>Hypothesis Testing</b>	<b>119</b>
4.1	Introduction	119
4.2	Overview	119
4.3	Types of Hypotheses	121

4.3.1	Simple and Composite Hypotheses	121
4.3.2	Linear Hypotheses	122
4.3.3	Nonlinear Hypotheses	123
4.4	Likelihood Ratio Test	124
4.5	Wald Test	128
4.5.1	Linear Hypotheses	129
4.5.2	Nonlinear Hypotheses	130
4.6	Lagrange Multiplier Test	131
4.7	Distribution Theory	133
4.7.1	Asymptotic Distribution of the Wald Statistic	133
4.7.2	Asymptotic Relationships Among the Tests	136
4.7.3	Finite Sample Relationships	138
4.8	Size and Power Properties	139
4.8.1	Size of a Test	139
4.8.2	Power of a Test	140
4.9	Applications	141
4.9.1	Exponential Regression Model	142
4.9.2	Gamma Regression Model	144
4.10	Exercises	147

## **PART TWO Regression Models**

<b>5</b>	<b>Linear Regression Models</b>	<b>157</b>
5.1	Introduction	157
5.2	Specification	158
5.2.1	Model Classification	158
5.2.2	Structural and Reduced Forms	160
5.3	Estimation	162
5.3.1	Single Equation: Ordinary Least Squares	162
5.3.2	Multiple Equations: FIML	167
5.3.3	Identification	171
5.3.4	Instrumental Variables	173
5.3.5	Seemingly Unrelated Regression (SUR) Models	176
5.4	Testing	177
5.5	Applications	183
5.5.1	Linear Taylor Rule	183
5.5.2	The Klein Model of the United States Economy	184
5.6	Exercises	187
<b>6</b>	<b>Nonlinear Regression Models</b>	<b>194</b>
6.1	Introduction	194
6.2	Specification	194
6.3	Maximum Likelihood Estimation	196

6.4	Gauss-Newton	202
6.4.1	Relationship to Nonlinear Least Squares	206
6.4.2	Relationship to Ordinary Least Squares	207
6.4.3	Asymptotic Distributions	207
6.5	Testing	208
6.5.1	LR, Wald and LM Tests	208
6.5.2	Non-nested Tests	212
6.6	Applications	215
6.6.1	Robust Estimation of the CAPM	215
6.6.2	Stochastic Frontier Models	218
6.7	Exercises	222
<b>7</b>	<b>Autocorrelated Regression Models</b>	<b>228</b>
7.1	Introduction	228
7.2	Specification	228
7.3	Maximum Likelihood Estimation	230
7.3.1	Exact Maximum Likelihood	230
7.3.2	Conditional Maximum Likelihood	232
7.4	Alternative Estimators	235
7.4.1	Gauss-Newton	235
7.4.2	Zig-Zag Algorithms	238
7.4.3	Cochrane-Orcutt	240
7.5	Distribution Theory	242
7.5.1	Maximum Likelihood Estimator	243
7.5.2	Least Squares Estimator	247
7.6	Lagged Dependent Variables	251
7.7	Testing	252
7.7.1	Alternative LM Test I	255
7.7.2	Alternative LM Test II	256
7.7.3	Alternative LM Test III	257
7.8	Autocorrelation in Systems of Equations	258
7.8.1	Estimation	259
7.8.2	Testing	260
7.9	Applications	261
7.9.1	Illiquidity and Hedge Funds	261
7.9.2	Beach-MacKinnon Simulation Study	262
7.10	Exercises	263
<b>8</b>	<b>Heteroskedastic Regression Models</b>	<b>272</b>
8.1	Introduction	272
8.2	Specification	272
8.3	Estimation	276

8.3.1	Maximum Likelihood	276
8.3.2	Relationship with Weighted Least Squares	279
8.4	Distribution Theory	281
8.5	Testing	282
8.6	Heteroskedasticity in Systems of Equations	288
8.6.1	Specification	288
8.6.2	Estimation	289
8.6.3	Testing	291
8.6.4	Heteroskedastic and Autocorrelated Disturbances	292
8.7	Applications	294
8.7.1	The Great Moderation	294
8.7.2	Finite Sample Properties of the Wald Test	295
8.8	Exercises	297

### **PART THREE Other Estimation Methods**

<b>9</b>	<b>Quasi-Maximum Likelihood Estimation</b>	<b>307</b>
9.1	Introduction	307
9.2	Misspecification	308
9.3	The Quasi-Maximum Likelihood Estimator	312
9.4	Asymptotic Distribution	314
9.4.1	Misspecification and the Information Equality	317
9.4.2	Independent and Identically Distributed Data	320
9.4.3	Dependent Data and Martingale Difference Score	322
9.4.4	Dependent Data and Score	322
9.5	Variance Estimation	324
9.6	Quasi-Maximum Likelihood and Linear Regression	326
9.6.1	Misspecification: Non-normality	329
9.6.2	Misspecification: Heteroskedasticity	329
9.6.3	Misspecification: Autocorrelation	331
9.6.4	The White Variance Estimator	332
9.6.5	The Newey-West Variance Estimator	334
9.7	Testing	338
9.8	Applications	339
9.8.1	Autoregressive Models for Count Data	339
9.8.2	The CKLS Model of Interest Rates	342
9.9	Exercises	345
<b>10</b>	<b>Generalised Method of Moments</b>	<b>352</b>
10.1	Introduction	352
10.2	Motivating Examples	353

10.2.1	Population Moments	353
10.2.2	Empirical Moments	354
10.2.3	GMM Models from Conditional Expectations	358
10.2.4	GMM and Maximum Likelihood	361
10.3	Estimation	362
10.3.1	The GMM Objective Function	362
10.3.2	Asymptotic Properties	364
10.3.3	Estimation Strategies	369
10.4	Over-identification Testing	373
10.5	Applications	378
10.5.1	Monte Carlo Evidence	378
10.5.2	Levels Effect in Interest Rates	381
10.6	Exercises	384
<b>11</b>	<b>Nonparametric Estimation</b>	<b>392</b>
11.1	Introduction	392
11.2	The Kernel Density Estimator	393
11.3	Properties of the Kernel Density Estimator	397
11.3.1	Finite Sample Properties	397
11.3.2	Optimal Bandwidth Selection	398
11.3.3	Asymptotic Properties	401
11.3.4	Dependent Data	403
11.4	Semi-parametric Density Estimation	404
11.5	The Nadaraya-Watson Kernel Regression Estimator	406
11.6	Properties of Kernel Regression Estimators	410
11.7	Bandwidth Selection for Kernel Regression	413
11.8	Multivariate Kernel Regression	416
11.9	Semi-parametric Regression of the Partial Linear Model	418
11.10	Applications	419
11.10.1	Derivatives of a Nonlinear Production Function	420
11.10.2	Drift and Diffusion Functions of SDEs	422
11.11	Exercises	424
<b>12</b>	<b>Estimation by Simulation</b>	<b>432</b>
12.1	Introduction	432
12.2	Motivating Example	433
12.3	Indirect Inference	435
12.3.1	Estimation	436
12.3.2	Relationship with Indirect Least Squares	439
12.4	Efficient Method of Moments (EMM)	441
12.4.1	Estimation	441
12.4.2	Relationship with Instrumental Variables	442

12.5	Simulated Generalised Method of Moments (SMM)	444
12.6	Estimating Continuous-Time Models	445
12.6.1	Brownian Motion	448
12.6.2	Geometric Brownian Motion	451
12.6.3	Stochastic Volatility	454
12.7	Applications	456
12.7.1	Finite Sample Properties	457
12.7.2	Empirical Properties	459
12.8	Exercises	460

## **PART FOUR Stationary Time Series**

<b>13</b>	<b>Linear Time Series Models</b>	467
13.1	Introduction	467
13.2	Time Series Properties of Data	468
13.3	Specification	470
13.3.1	Univariate Model Classification	471
13.3.2	Multivariate Model Classification	474
13.4	Stationarity	476
13.4.1	The Stationarity Condition	476
13.4.2	Wold's Representation Theorem	477
13.4.3	Transforming a VAR to a VMA	478
13.5	Invertibility	481
13.5.1	The Invertibility Condition	481
13.5.2	Transforming a VMA to a VAR	481
13.6	Estimation	482
13.7	Optimal Choice of Lag Order	486
13.8	Distribution Theory	488
13.9	Testing	489
13.10	Analysing Vector Autoregressions	491
13.10.1	Granger Causality Testing	492
13.10.2	Impulse Response Functions	493
13.10.3	Variance Decompositions	498
13.11	Applications	500
13.11.1	Barro's Rational Expectations Model	501
13.11.2	The Campbell-Shiller Present Value Model	502
13.12	Exercises	504
<b>14</b>	<b>Structural Vector Autoregressions</b>	512
14.1	Introduction	512
14.2	Specification	513
14.2.1	Short-Run Restrictions	516
14.2.2	Long-Run Restrictions	519

14.2.3	Short-Run and Long-Run Restrictions	522
14.2.4	Sign Restrictions	524
14.3	Estimation	527
14.4	Identification	531
14.5	Testing	533
14.6	Applications	535
14.6.1	Peersman's Model of Oil Price Shocks	535
14.6.2	A Portfolio SVAR Model of Australia	537
14.7	Exercises	539
<b>15</b>	<b>Latent Factor Models</b>	<b>544</b>
15.1	Introduction	544
15.2	Motivating Examples	545
15.2.1	Empirical	545
15.2.2	Theoretical	547
15.3	The Recursions of the Kalman Filter	548
15.3.1	Univariate	548
15.3.2	Multivariate	554
15.4	Extensions	557
15.4.1	Intercepts	557
15.4.2	Dynamics	557
15.4.3	Nonstationary Factors	558
15.4.4	Exogenous and Predetermined Variables	559
15.5	Factor Extraction	560
15.6	Estimation	561
15.6.1	Identification	561
15.6.2	Maximum Likelihood	562
15.6.3	Principal Components Estimator	564
15.7	Relationship to VARMA Models	566
15.8	Applications	567
15.8.1	The Hodrick-Prescott Filter	567
15.8.2	A Factor Model of Spreads with Money Shocks	571
15.9	Exercises	573
 <b>PART FIVE Nonstationary Time Series</b>		
<b>16</b>	<b>Nonstationary Distribution Theory</b>	<b>583</b>
16.1	Introduction	583
16.2	Specification	584
16.2.1	Models of Trends	584
16.2.2	Integration	586
16.3	Estimation	588
16.3.1	Stationary Case	588

16.3.2	Nonstationary Case: Stochastic Trends	591
16.3.3	Nonstationary Case: Deterministic Trends	594
16.4	Asymptotics for Integrated Processes	596
16.4.1	Brownian Motion	597
16.4.2	Functional Central Limit Theorem	598
16.4.3	Continuous Mapping Theorem	602
16.4.4	Stochastic Integrals	603
16.5	Multivariate Analysis	606
16.6	Applications	609
16.6.1	Least Squares Estimator of the AR(1) Model	609
16.6.2	Trend Estimation in the Presence of a Random Walk	611
16.7	Exercises	613
<b>7</b>	<b>Unit Root Testing</b>	<b>619</b>
17.1	Introduction	619
17.2	Specification	619
17.3	Detrending	621
17.3.1	Ordinary Least Squares (OLS)	623
17.3.2	First Differences	624
17.3.3	Generalised Least Squares (GLS)	625
17.4	Testing	626
17.4.1	Dickey-Fuller Tests	626
17.4.2	M Tests	627
17.5	Distribution Theory	629
17.5.1	Ordinary Least Squares Detrending	631
17.5.2	Generalised Least Squares Detrending	632
17.5.3	Simulating Critical Values	634
17.6	Power	636
17.6.1	Near Integration	637
17.6.2	Asymptotic Local Power	639
17.6.3	Point Optimal Tests	639
17.6.4	Asymptotic Power Envelope	641
17.7	Autocorrelation	642
17.7.1	Dickey-Fuller Test with Autocorrelation	642
17.7.2	M Tests with Autocorrelation	643
17.8	Structural Breaks	645
17.8.1	Known Break Point	647
17.8.2	Unknown Break Point	651
17.9	Applications	652
17.9.1	Power and the Initial Value	652
17.9.2	Nelson-Plosser Data Revisited	653
17.10	Exercises	655

<b>18 Cointegration</b>	662
18.1 Introduction	662
18.2 Long-Run Economic Models	663
18.3 Specification of a VECM	665
18.3.1 Bivariate Models	665
18.3.2 Multivariate Models	667
18.3.3 Cointegration	668
18.3.4 Deterministic Components	670
18.4 Estimation	672
18.4.1 Full-Rank Case	673
18.4.2 Reduced-Rank Case: Iterative Estimator	674
18.4.3 Reduced-Rank Case: Johansen Estimator	675
18.4.4 Zero-Rank Case	681
18.5 Identification	682
18.5.1 Triangular Restrictions	682
18.5.2 Structural Restrictions	683
18.6 Distribution Theory	684
18.6.1 Asymptotic Distribution of the Eigenvalues	684
18.6.2 Asymptotic Distribution of the Parameters	686
18.7 Testing	689
18.7.1 Cointegrating Rank	690
18.7.2 Cointegrating Vector	693
18.7.3 Exogeneity	695
18.8 Dynamics	696
18.8.1 Impulse Responses	696
18.8.2 Cointegrating Vector Interpretation	697
18.9 Applications	698
18.9.1 Rank Selection Based on Information Criteria	698
18.9.2 Effects of Heteroskedasticity on the Trace Test	700
18.10 Exercises	701

## **PART SIX Nonlinear Time Series**

<b>19 Nonlinearities in Mean</b>	715
19.1 Introduction	715
19.2 Motivating Examples	715
19.3 Threshold Models	720
19.3.1 Specification	720
19.3.2 Estimation	722
19.3.3 Testing	723
19.4 Artificial Neural Networks	726
19.4.1 Specification	726
19.4.2 Estimation	728

19.4.3 Testing	731
19.5 Bilinear Time Series Models	732
19.5.1 Specification	732
19.5.2 Estimation	733
19.5.3 Testing	734
19.6 Markov Switching Model	734
19.7 Nonparametric Autoregression	738
19.8 Nonlinear Impulse Responses	740
19.9 Applications	744
19.9.1 A Multiple Equilibrium Model of Unemployment	744
19.9.2 Bivariate Threshold Models of G7 Countries	745
19.10 Exercises	748
<b>20 Nonlinearities in Variance</b>	<b>758</b>
20.1 Introduction	758
20.2 Statistical Properties of Asset Returns	758
20.3 The ARCH Model	762
20.3.1 Specification	762
20.3.2 Estimation	763
20.3.3 Testing	767
20.4 Univariate Extensions	769
20.4.1 GARCH	769
20.4.2 Integrated GARCH	774
20.4.3 Additional Variables	775
20.4.4 Asymmetries	776
20.4.5 Garch-in-Mean	777
20.4.6 Diagnostics	779
20.5 Conditional Non-normality	780
20.5.1 Parametric	780
20.5.2 Semi-parametric	782
20.5.3 Nonparametric	783
20.6 Multivariate GARCH	786
20.6.1 VECH	787
20.6.2 BEKK	788
20.6.3 DCC	791
20.6.4 DECO	797
20.7 Applications	798
20.7.1 DCC and DECO Models of United States Yields	798
20.7.2 A Time-Varying Volatility SVAR Model	799
20.8 Exercises	802
<b>21 Discrete Time Series Models</b>	<b>812</b>
21.1 Introduction	812

21.2	Motivating Examples	812
21.3	Qualitative Data	815
21.3.1	Specification	815
21.3.2	Estimation	819
21.3.3	Testing	822
21.3.4	Binary Autoregressive Models	824
21.4	Ordered Data	826
21.5	Count Data	828
21.5.1	The Poisson Regression Model	830
21.5.2	Integer Autoregressive Models	831
21.6	Duration Data	835
21.7	Applications	837
21.7.1	An ACH Model of United States Airline Trades	837
21.7.2	EMM Estimator of Integer Models	840
21.8	Exercises	842
<b>Appendix A: Change of Variable in Density Functions</b>		<b>849</b>
<b>Appendix B: The Lag Operator</b>		<b>850</b>
B.1	Basics	850
B.2	Polynomial Convolution	850
B.3	Polynomial Inversion	851
B.4	Polynomial Decomposition	852
<b>Appendix C: FIML Estimation of a Structural Model</b>		<b>854</b>
C.1	Log-Likelihood Function	854
C.2	First-Order Conditions	854
C.3	Solution	855
<b>Appendix D: Additional Nonparametric Results</b>		<b>857</b>
D.1	Mean	857
D.2	Variance	859
D.3	Mean Square Error	861
D.4	Roughness	862
D.4.1	Roughness Results for the Gaussian Distribution	862
D.4.2	Roughness Results for the Gaussian Kernel	863
