
CONTENTS

Preface	ix
1 Introduction	1
2 Characteristics of urban flora and fauna	9
2.1 Proliferation of introduced species	9
2.2 Severe disturbance	12
2.3 Increased opportunities for dispersal	14
2.4 Habitat diversity	15
2.5 Taxonomic and evolutionary aspects	18
2.6 Vertebrates	20
2.7 Invertebrates	22
2.8 Planted vegetation	23
2.9 Historical factors	24
3 The urban climate and air pollution	25
3.1 Climate	25
3.2 Air pollution	32
4 Soils in urban areas	41
4.1 The classification of urban soils	41
4.2 Conspectus	42
4.3 Characteristics of urban soils	43
4.4 Brick rubble	47

4.5	Topsoiled sites	51
5	Vegetation dynamics	55
5.1	Ecological change as greenfield sites become developed	57
5.2	Ecological change as urban land is recycled	59
5.3	Postdevelopment	64
5.4	Discussion	66
6	Urban commons	68
6.1	Plants	69
6.2	Animals	90
6.3	Research opportunities	108
7	Industrial areas	110
7.1	Raw materials	111
7.2	Buildings, structures, hard landscapes	114
7.3	Energy aspects	117
7.4	Stores and warehouses	119
7.5	Solid waste material	120
7.6	Modern trends	122
8	Railways	126
8.1	The permanent way	127
8.2	Sidings	131
8.3	Brickwork and masonry	137
8.4	Verges	140
8.5	Boundary features	142
9	Roads	145
9.1	Road design	146
9.2	Exhaust emissions	147
9.3	De-icing salt	150
9.4	Traffic stress	154
9.5	Street trees	157
9.6	Grass verges	161
9.7	Animals	162
10	City centres	165

viii Contents

15.2	Rivers	268
15.3	Canals	279
15.4	Ponds, lakes, reservoirs and water mains	286
16	Woodland	291
16.1	The archaeology of a small urban wood	292
16.2	Ancient seminatural woodland	294
16.3	Plantations on the site of ancient woodland	300
16.4	Spontaneous recent woodland	302
16.5	Plantations	305
16.6	Birds	308
17	Living with wildlife	311
17.1	The aesthetic conflict	312
17.2	Social considerations	314
17.3	Design and management	316
17.4	Benefits for all	317
	References	320
	Index	337
