Contents

Preface	x
Series Editor's Foreword	xii
Acknowledgements	xiv
List of Abbreviations	xvi
Glossary	xvii
List of Cases	xxii
1 Why Philosophy of Epidemiology? Introducing philosophy of epidemiology Themes Synopsis	1 1 3 8
2 Philosophical and Epidemiological Basics Summary The problem of induction From induction to causation Epidemiology: a potted history Basic kinds of epidemiological study Conclusion	10 10 10 15 17 20 24
3 The Causal Interpretation Problem Summary The causal interpretation problem The search for the extra ingredient The probabilistic approach The counterfactual approach The explanatory approach Conclusion	26 26 26 33 34 44 50
4 Causal Inference, Translation, and Stability Summary What makes a good causal inference? The myth of "translation" The need for stability	56 56 56 57 59

viii Contents

	What is stability?	61
	Conclusion	64
5	Stable Causal Inference	66
	Summary	66
	Approaches to causal inference	66
	Detecting stability	69
	Stability and quality of evidence	73
	Stability and mechanisms	76
	Conclusion	79
6	Prediction	81
	Summary	81
	From causation to prediction	81
	A mysterious omission	84
	What is a good prediction?	89
	Predicting reliably and predicting justifiably	93
	Conclusion	97
7	Making and Assessing Epidemiological Predictions	99
	Summary	99
	Prediction and stability	99
	Delivering stable predictions	101
	Extrapolation	104
	Inference from laws of nature	108
	Knowledge of underlying mechanisms	110
	Conclusion	113
8	Puzzles of Attributability	115
	Summary	115
	Two common errors in understanding attributable fraction	115
	The exclusive cause fallacy	117
	The counterfactual fallacy	122
	Must excess fractions be causally interpreted?	124
	"Attributable to" as "explained by"	126
	Conclusion	127
9	Risk Relativism, Interaction, and the Shadow of Physics	129
	Summary	129
	Risk relativism	129
	Arguments from statistical convenience	132
	The uses of RR in causal inference	134
	Are risk ratios "transportable"?	139

Conclusion 144 10 Multifactorialism and Beyond 145 Summary 145 Epidemiology and the scope of medicine 145 Monocausal v. multifactorial models of disease 149 Why not catalogue risk factors? 155 The contrastive model of disease 157 Conclusion 161 11 Epidemiology and the Law 162 Summary 162 Why use epidemiological evidence in lawsuits? 162 Legal positions and contortions 163 A crucial distinction 172 What does epidemiological evidence say? 173 What can epidemiological evidence prove? 176 Conclusion 180 12 Conclusion: Thinking Is Good for You 182 Notes 183 References 189			Contents ix
Conclusion 144 10 Multifactorialism and Beyond 145 Summary 145 Epidemiology and the scope of medicine 145 Monocausal v. multifactorial models of disease 149 Why not catalogue risk factors? 155 The contrastive model of disease 157 Conclusion 161 11 Epidemiology and the Law 162 Summary 162 Why use epidemiological evidence in lawsuits? 162 Legal positions and contortions 163 A crucial distinction 172 What does epidemiological evidence say? 173 What can epidemiological evidence prove? 176 Conclusion 180 12 Conclusion: Thinking Is Good for You 182 Notes 183 References 189		The shadow of physical law	142
Summary Epidemiology and the scope of medicine Monocausal v. multifactorial models of disease Why not catalogue risk factors? The contrastive model of disease Conclusion 161 11 Epidemiology and the Law Summary Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You Notes References 183			144
Epidemiology and the scope of medicine Monocausal v. multifactorial models of disease Why not catalogue risk factors? The contrastive model of disease Conclusion 161 11 Epidemiology and the Law Summary Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References	10	Multifactorialism and Beyond	145
Monocausal v. multifactorial models of disease Why not catalogue risk factors? The contrastive model of disease Conclusion 161 11 Epidemiology and the Law Summary Hospital Egal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You Notes 183 References		Summary	145
Why not catalogue risk factors? The contrastive model of disease Conclusion 157 Conclusion 161 11 Epidemiology and the Law Summary Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References		Epidemiology and the scope of medicine	145
The contrastive model of disease Conclusion 161 11 Epidemiology and the Law Summary 162 Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References		Monocausal v. multifactorial models of disease	149
The contrastive model of disease Conclusion 161 11 Epidemiology and the Law Summary 162 Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References		Why not catalogue risk factors?	155
11 Epidemiology and the Law Summary Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References		,	157
Summary Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References		Conclusion	161
Why use epidemiological evidence in lawsuits? Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion Conclusion: Thinking Is Good for You 182 Notes References 183	11	Epidemiology and the Law	162
Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion Conclusion: Thinking Is Good for You 182 Notes References 183		Summary	162
Legal positions and contortions A crucial distinction What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes 183 References		Why use epidemiological evidence in lawsuits?	162
What does epidemiological evidence say? What can epidemiological evidence prove? Conclusion 12 Conclusion: Thinking Is Good for You 182 Notes References 183		• •	163
What can epidemiological evidence prove? Conclusion 180 12 Conclusion: Thinking Is Good for You 182 Notes 183 References 189		~ ·	172
What can epidemiological evidence prove? Conclusion 180 12 Conclusion: Thinking Is Good for You 182 Notes 183 References 189		What does epidemiological evidence say?	173
Conclusion 180 12 Conclusion: Thinking Is Good for You 182 Notes 183 References 189		•	176
