

Contents

1	Introduction	1
1.1	Problem Statement and Research Questions	1
1.2	Significance of the Study	6
1.3	Research Objectives	7
1.4	Research Hypotheses	7
1.5	Organization of the Thesis	7
	References	8
2	Theoretical Background and State of the Art	11
2.1	Remote Sensing Concept	11
2.2	Remote Sensing Application in Syria	13
2.3	Land Use-Land Cover Mapping	15
2.3.1	The Classification Process	15
2.3.2	The General Classification Techniques	17
2.3.3	Remote Sensing Applications in Land Use/Land Cover Mapping	19
2.4	Land Use/Land Cover Change Detection Mapping	21
2.4.1	Change Detection Techniques	22
2.4.2	Change Detection in Arid- and Semi-Arid-Environments	24
2.5	Remote Sensing for Irrigated Agriculture	26
2.5.1	Remote Sensing Approaches for Vegetation Studies	27
2.5.2	Crop Discrimination from Satellite-Based Images	28
2.5.3	Crop Area Estimation from Satellite-Based Images	30

3	Overview of Study Area	39
3.1	Syria	39
3.2	The Euphrates River Basin	39
3.3	Irrigation Projects in the ERB	41
3.4	Climate	42
3.5	Morphological Structure	44

3.6	Soils	44
3.7	Hydrology	45
3.8	Vegetation and Land Use—Land Cover	45
	References	48
4	Data	49
4.1	Satellite Data	49
4.1.1	LANDSAT (MSS, TM and ETM+) Sensors	50
4.1.2	TERRA-ASTER	54
4.1.3	SRTM	56
4.2	Reference- and Complementary-Data	57
4.2.1	Field Reference Data	58
4.2.2	Maps	59
4.2.3	Statistics	59
4.2.4	Ancillary Data	60
	References	60
5	Research Methodology	63
5.1	Extraction of the Study Area	65
5.2	Pre-Processing of the Satellite Data	66
5.2.1	Geometric Data Processing	67
5.2.2	Atmospheric Correction	71
5.2.3	Radiometric Processing/Calibration	77
5.2.4	Data Fusion	81
5.2.5	Mosaicing, Subsetting and Masking	83
5.3	Design of the LULC-Classification System	84
5.4	Field Work	87
5.5	The Possibility of Spectral Separation Between Crops/Spectral Considerations	90
5.5.1	The Phenological Case of the Different Crops/the Agricultural Calendar	95
5.5.2	The Size of the Agriculture Holdings and Methods of Water Supply/Spatial Considerations/Spatial Aspects of Spectral Response Patterns	97
5.5.3	The Choice of the most Appropriate Time to Obtain Satellite Images/Temporal Considerations/Spatial Aspects of Spectral Response Patterns	99
5.5.4	Choice of the most Appropriate Bands Composite of the Satellite Images	100
5.6	Training Samples: Selection, Analysis and Evaluation	100
5.7	The Choice and Evaluation of the Optimized Method of Automated Classification	111
5.7.1	The Test Area	112
5.7.2	Results and Evaluation	124

5.8	General Classes Classification	130
5.9	Irrigated Areas Mapping	133
5.10	Crops Classification	136
5.11	Post-Classification Processing	144
5.12	Automated Change Detection Mapping.	146
	5.12.1 Pre-Classification Approach	146
	5.12.2 Post-Classification Approach.	147
5.13	Accuracy Assessment	149
	References	154
6	Results, Analysis and Discussion	161
6.1	LULC-Classification.	161
	6.1.1 The Broad Major LULC-Features	162
	6.1.2 The Temporal Development Mapping of the Irrigated Areas	167
	6.1.3 Distinguishing, Classification and Areas Measurement of the Strategic Crops.	169
6.2	Accuracy Assessment Comparisons	177
6.3	LULC-Change Detection Mapping.	186
	6.3.1 Pre-Classification Results	186
	6.3.2 Post-Classification Results	189
	References	196
7	Summary, Concluding Remarks and Recommendations	197
7.1	Summary	197
7.2	Concluding Remarks	201
7.3	Recommendations/Outlook	202
