

Contents

1	Introduction	1
2	Reconsidering the Relationship Between Energy and GDP: Meta-Regression Results	13
2.1	Introduction	13
2.2	The Relationship between Energy and GDP from an Empirical Perspective	15
2.3	Empirical Analysis	17
2.3.1	Choice of Studies	17
2.3.2	Meta-Significance Testing	21
2.4	Results and Discussion	23
2.4.1	Results	23
2.4.2	Discussion	24
2.5	Conclusions	27
3	Explaining the (Non-) Causality Between Energy and Economic Growth in the U.S.	29
3.1	Introduction	29
3.2	Reasons for the Inconclusive Evidence for Causality between Energy and GDP	32
3.2.1	Simpsons' Paradox: The 'Correct' Level of Aggregation	32
3.2.2	(In-) Appropriate Pairs of Variables	34
3.2.3	Omitted Variable Bias	39
3.3	Data and Econometric Methodology	42
3.3.1	Data Description	42
3.3.2	Estimation Strategy	43
3.3.3	Stationarity	44

3.3.4	Cointegration	45
3.3.5	Long-run and Short-run Granger Causality	46
3.4	Empirical Results and Discussion	48
3.4.1	Results of the Cointegration Tests and Model Selection	48
3.4.2	Results of the Long-run and Short-run Granger Causality Tests	51
3.5	Conclusions	55
4	The Growth of the "Service Economy" and the Energy Paradox of Sectoral Change	57
4.1	Introduction	57
4.2	Energy and Growth — Background and Technological Contingencies .	59
4.3	A Sectoral Production Model with Energy-Labor Substitution	63
4.4	Data and Methodology	65
4.5	Empirical Results	67
4.6	Conclusions	68
5	Can Declining Energy Intensity Mitigate Climate Change? Decomposition and Meta-Regression Results	71
5.1	Introduction	71
5.2	The Role of Energy Intensity in Climate Change Mitigation	73
5.3	Empirical Analysis	75
5.3.1	Data Selection and Estimation Strategy	75
5.3.2	Results	77
5.3.3	Discussion of Results	78
5.4	Conclusions	78
6	Conclusions and Outlook	81
A	Appendix	107
B	Appendix	109
C	Appendix	119
