

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	General and Historical Remarks . . . . .	1
1.2	Importance for Science and Technology . . . . .	3
1.3	Philosophical Implications . . . . .	5
	References . . . . .	8
<b>2</b>	<b>Some Fundamental Experiments</b> . . . . .	9
2.1	Photoelectric Effect . . . . .	9
2.2	Compton Effect . . . . .	12
2.3	Diffraction of Massive Particles . . . . .	15
2.4	Particle Interference at the Double Slit . . . . .	19
2.4.1	Double Slit Experiments with Electrons . . . . .	21
2.4.2	Particle Interference and “Which-Way” Information . . . . .	23
	References . . . . .	25
<b>3</b>	<b>Particle-Wave Duality</b> . . . . .	27
3.1	The Wave Function and Its Interpretation . . . . .	27
3.2	Wave Packet and Particle Velocity . . . . .	30
3.3	The Uncertainty Principle . . . . .	34
3.4	An Excursion into Classical Mechanics . . . . .	37
3.5	Observables, Operators and Schrödinger Equation . . . . .	40
3.6	Simple Solutions of the Schrödinger Equation . . . . .	46
3.6.1	“Locked-Up” Electrons: Confined Quantum States . . . . .	46
3.6.2	Particle Currents . . . . .	54
3.6.3	Electrons Run Against a Potential Step . . . . .	55
3.6.4	Electrons Tunnel Through a Barrier . . . . .	58
3.6.5	Resonant Tunneling . . . . .	63
3.7	Single Electron Tunneling . . . . .	72
	References . . . . .	78
<b>4</b>	<b>Quantum States in Hilbert Space</b> . . . . .	79
4.1	Eigenvectors and Measurement of Observables . . . . .	79

4.2	Commutation of Operators: Commutators . . . . .	85
4.3	Representation of Quantum States and Observables . . . . .	87
4.3.1	Vectors of Probability Amplitudes and Matrices as Operators . . . . .	87
4.3.2	Rotations of Hilbert Space . . . . .	92
4.3.3	Quantum States in Dirac Notation . . . . .	95
4.3.4	Quantum States with a Continuous Eigenvalue Spectrum . . . . .	99
4.3.5	Time Evolution in Quantum Mechanics . . . . .	103
4.4	Games with Operators: The Oscillator . . . . .	106
4.4.1	The Classical Harmonic Oscillator . . . . .	107
4.4.2	Upstairs-Downstairs: Step Operators and Eigenvalues . . . . .	108
4.4.3	The Anharmonic Oscillator . . . . .	115
	References . . . . .	118
<b>5</b>	<b>Angular Momentum, Spin and Particle Categories . . . . .</b>	<b>119</b>
5.1	The Classical Circular Motion . . . . .	119
5.2	Quantum Mechanical Angular Momentum . . . . .	121
5.3	Rotational Symmetry and Angular Momentum; Eigenstates . . . . .	128
5.4	Circulating Electrons in a Magnetic Field . . . . .	134
5.4.1	The Lorentz Force . . . . .	134
5.4.2	The Hamilton Operator with Magnetic Field . . . . .	135
5.4.3	Angular Momentum and Magnetic Moment . . . . .	137
5.4.4	Gauge Invariance and Aharanov–Bohm-Effect . . . . .	140
5.5	The Spin . . . . .	147
5.5.1	Stern–Gerlach Experiment . . . . .	147
5.5.2	The Spin and Its 2D Hilbert Space . . . . .	151
5.5.3	Spin Precession . . . . .	155
5.6	Particle Categories: Fermions and Bosons . . . . .	157
5.6.1	Two and More Particles . . . . .	157
5.6.2	Spin and Particle Categories: The Pauli Exclusion Principle . . . . .	161
5.6.3	Two Different Worlds: Fermi and Bose Statistics . . . . .	166
5.6.4	The Zoo of Elementary Particles . . . . .	173
5.7	Angular Momentum in Nanostructures and Atoms . . . . .	183
5.7.1	Artificial Quantum Dot Atoms . . . . .	183
5.7.2	Atoms and Periodic Table . . . . .	190
5.7.3	Quantum Rings . . . . .	196
	References . . . . .	200
<b>6</b>	<b>Approximate Solutions for Important Model Systems . . . . .</b>	<b>201</b>
6.1	Particles in a Weakly Varying Potential: The WKB Method . . . . .	202
6.1.1	Application: Tunneling Through a Schottky Barrier . . . . .	204
6.2	Clever Guess of a Wave Function: The Variational Method . . . . .	206
6.2.1	Example of the Harmonic Oscillator . . . . .	210
6.2.2	The Ground State of the Hydrogen Atom . . . . .	212
6.2.3	Molecules and Coupled Quantum Dots . . . . .	215
