Preface xi

Chapter 1. Introduction 1
§1.1. Basic themes 1
§1.2. Classical and quantum mechanics 3
§1.3. Overview 5
§1.4. Notes 9

Part 1. BASIC THEORY

Chapter 2. Symplectic geometry and analysis 13
§2.1. Flows 13
§2.2. Symplectic structure on $\mathbb{R}^{2n}$ 14
§2.3. Symplectic mappings 16
§2.4. Hamiltonian vector fields 20
§2.5. Lagrangian submanifolds 23
§2.6. Notes 26

Chapter 3. Fourier transform, stationary phase 27
§3.1. Fourier transform on $\mathscr{S}$ 27
§3.2. Fourier transform on $\mathscr{S}'$ 35
§3.3. Semiclassical Fourier transform 38
§3.4. Stationary phase in one dimension 40

§3.5. Stationary phase in higher dimensions 46
§3.6. Oscillatory integrals 52
§3.7. Notes 54

Chapter 4. Semiclassical quantization 55
§4.1. Definitions 56
§4.2. Quantization formulas 59
§4.3. Composition, asymptotic expansions 65
§4.4. Symbol classes 72
§4.5. Operators on L^2 81
§4.6. Compactness 87
§4.7. Inverses, Gårding inequalities 90
§4.8. Notes 96

Part 2. APPLICATIONS TO PARTIAL DIFFERENTIAL EQUATIONS

Chapter 5. Semiclassical defect measures 99
§5.1. Construction, examples 99
§5.2. Defect measures and PDE 104
§5.3. Damped wave equation 106
§5.4. Notes 117

Chapter 6. Eigenvalues and eigenfunctions 119
§6.1. The harmonic oscillator 119
§6.2. Symbols and eigenfunctions 124
§6.3. Spectrum and resolvents 129
§6.4. Weyl's Law 132
§6.5. Notes 137

Chapter 7. Estimates for solutions of PDE 139
§7.1. Classically forbidden regions 140
§7.2. Tunneling 143
§7.3. Order of vanishing 148
§7.4. L^∞ estimates for quasimodes 152
§7.5. Schauder estimates 158
§7.6. Notes 167

Part 3. ADVANCED THEORY AND APPLICATIONS

Chapter 8. More on the symbol calculus 171
§8.1. Beals's Theorem 171
§8.2. Real exponentiation of operators 177
§8.3. Generalized Sobolev spaces 182
§8.4. Wavefront sets, essential support, and microlocality 187
§8.5. Notes 196

Chapter 9. Changing variables 197
§9.1. Invariance, half-densities 197
§9.2. Changing symbols 203
§9.3. Invariant symbol classes 206
§9.4. Notes 217

Chapter 10. Fourier integral operators 219
§10.1. Operator dynamics 220
§10.2. An integral representation formula 226
§10.3. Strichartz estimates 235
§10.4. L^p estimates for quasimodes 240
§10.5. Notes 244

Chapter 11. Quantum and classical dynamics 245
§11.1. Egorov's Theorem 245
§11.2. Quantizing symplectic mappings 251
§11.3. Quantizing linear symplectic mappings 257
§11.4. Egorov's Theorem for longer times 264
§11.5. Notes 271

Chapter 12. Normal forms 273
§12.1. Overview 273
§12.2. Normal forms: real symbols 275
§12.3. Propagation of singularities 279
§12.4. Normal forms: complex symbols 282
§12.5. Quasimodes, pseudospectra 286
§12.6. Notes 289

Chapter 13. The FBI transform 291
§13.1. Motivation 291
§13.2. Complex analysis 293
§13.3. FBI transforms and Bergman kernels 302
§13.4. Quantization and Toeplitz operators 311
§13.5. Applications 321
§13.6. Notes 336

Part 4. SEMICLASSICAL ANALYSIS ON MANIFOLDS

Chapter 14. Manifolds 339
§14.1. Definitions, examples 339
§14.2. Pseudodifferential operators on manifolds 345
§14.3. Schrödinger operators on manifolds 354
§14.4. Notes 362

Chapter 15. Quantum ergodicity 365
§15.1. Classical ergodicity 366
§15.2. A weak Egorov Theorem 368
§15.3. Weyl's Law generalized 370
§15.4. Quantum ergodic theorems 372
§15.5. Notes 379

Part 5. APPENDICES

Appendix A. Notation 383
§A.1. Basic notation 383
§A.2. Functions, differentiation 385
§A.3. Operators 387
§A.4. Estimates 388
§A.5. Symbol classes 389

Appendix B. Differential forms 391
§B.1. Definitions 391
§B.2. Push-forwards and pull-backs 394
§B.3. Poincaré's Lemma 396
§B.4. Differential forms on manifolds 397

Appendix C. Functional analysis 399
§C.1. Operator theory 399
§C.2. Spectral theory 403
§C.3. Trace class operators 411
Appendix D. Fredholm theory 415
§D.1. Grushin problems 415
§D.2. Fredholm operators 416
§D.3. Meromorphic continuation 418
Bibliography 421
Index 427
