<i>List of acronyms and abbreviations</i>	xi
<i>Foreword</i>	xiii
<i>Acknowledgements</i>	xv
1 Introduction	1
2 Global energy consumption	9
2.1 Energy consumption by region	9
2.2 Projection into the future	11
2.3 World electricity generation	18
3 Coal: Formation, classification, reserves and production	27
3.1 Coal formation	27
3.2 Rank of coal	28
3.3 Composition	29
3.4 Structure of coal	29
3.5 Classification and analysis	30
3.6 Uses	32
3.7 Energy density	33
3.8 Global coal reserves: regional distribution	34
3.9 Global coal production	36
3.10 Coal production projections to 2035	37
4 Natural gas: Reserves, growth and costs	41
4.1 Composition and emissions	41
4.2 Formation and extraction of natural gas	42
4.3 Global natural gas reserves	45
4.3.1 Global production	46
4.3.2 Projection through 2035	47
4.3.3 Global consumption of natural gas	48
4.4 Unconventional gas reserves	50
4.4.1 Global shale gas production	53
4.4.2 Projection through 2035	54
4.5 Environmental concerns	58

4.6	Liquified natural gas (LNG)	59
4.7	Gas market analysis and prices	60
5	Pollution from coal combustion	65
5.1	Energy related CO ₂ emissions	66
5.2	Hazardous pollutants from coal	70
5.3	Impact on human health and environment	70
5.4	Control technologies	73
6	Coal treatment and emissions control technologies	75
6.1	Coal treatment	75
6.1.1	Introduction	75
6.1.2	Pre-combustion processes (coal benefaction)	76
6.1.3	Benefits of pre-drying	80
6.2	Emissions control technologies	82
6.2.1	Used during combustion	82
6.2.2	Post-combustion processes	82
7	Coal-based electricity generation	101
7.1	Conventional power generation plant	102
7.2	Steam properties	105
7.3	Steam generators/boilers	107
7.3.1	Early steam boilers	107
7.3.2	High pressure boilers	112
7.3.3	Performance evaluation of boilers	115
7.4	Steam turbine and power cycles	117
7.5	Steam condenser	122
8	Advanced coal-based power generation	127
8.1	Subcritical PC technology	127
8.2	Supercritical and ultra supercritical PC technologies	129
8.3	Fluidized Bed combustion	136
8.3.1	Bubbling fluidized-bed units	137
8.3.2	Circulating fluidized-bed (CFB) units	138
8.3.3	Pressurized fluidized bed combustion (PFBC)	143
8.4	Performance and cost comparison	146
8.5	Gasification	148
8.5.1	Chemistry of gasification	148
8.5.2	Generic types of gasifiers	150
8.5.3	Commercial gasifiers	152
8.5.4	Syngas cleanup	155
8.5.5	Partial gasification combined cycle	158
8.6	Integrated gasification combined cycle	160
8.6.1	Process, plant structure and implementation	160
8.6.2	Environmental performance of gasification	165
8.6.3	Economics	165

8.6.4	R&D areas for improvement	167
8.6.5	Outlook for coal-based IGCC	169
8.7	Hybrid gasification	169
8.8	Underground coal gasification	171
9	Carbon capture and storage	183
9.1	Introduction	183
9.2	Transport and storage	184
9.2.1	Transportation	185
9.2.2	Storage	186
9.2.3	Estimated capacity	187
9.2.4	Storage times	190
9.2.5	Monitoring and verification	191
9.3	Capture technologies	192
9.3.1	Post-combustion capture (flue gas separation)	193
9.3.2	Pre-combustion capture	196
9.3.3	Oxy-fuel combustion capture	199
9.3.4	Energy price in capture technologies	201
9.3.5	Partial CO ₂ capture	202
9.4	Performance and costs	203
9.5	Policy framework to deploy CCS systems	209
9.6	Present status of capture technology	209
9.7	Advanced capture systems – costs and deployment projections	220
9.8	Technology road map for CCS	223
9.9	Retrofits for CO ₂ capture	225
9.10	Capture-ready units	228
10	Coal-to-liquid fuels	239
10.1	Chemistry of coal-to-liquid synthesis	239
10.2	Technology choices	240
10.2.1	Direct coal liquefaction	241
10.2.2	Indirect-coal-liquefaction	243
10.2.3	Comparison between DCL and ICL	247
10.2.4	Costs of DCL & ICL	250
10.2.5	Outlook for CTL	251
11	CCTs in developing countries	257
11.1	State of affairs	257
11.2	CCS in developing countries	258
11.3	China	261
11.4	India	269
12	Outlook for clean coal technologies	279
<i>Annexes</i>		287
