|--|----|
| Preface | ix |
| Chapter 1. Preliminaries | 1 |
| §1.1. Classes of Special Matrices | 2 |
| §1.2. The Characteristic Polynomial | 6 |
| §1.3. The Spectral Mapping Theorem | 8 |
| §1.4. Eigenvalues and Diagonal Entries | 8 |
| §1.5. Norms | 10 |
| §1.6. Convergence of the Power Sequence of a Matrix | 13 |
| §1.7. Matrix Decompositions | 14 |
| §1.8. Numerical Range | 18 |
| §1.9. The Companion Matrix of a Polynomial | 21 |
| §1.10. Generalized Inverses | 22 |
| §1.11. Schur Complements | 23 |
| §1.12. Applications of Topological Ideas | 24 |
| §1.13. Gröbner Bases | 25 |
| §1.14. Systems of Linear Inequalities | 27 |
| §1.15. Orthogonal Projections and Reducing Subspaces | 29 |
| §1.16. Books and Journals about Matrices | 31 |
| Exercises | 31 |
| Chapter 2. Tensor Products and Compound Matrices | 35 |
| §2.1. Definitions and Basic Properties | 35 |
| §2.2. Linear Matrix Equations | 40 |

| | |
|--|-----|
| §2.3. Frobenius-König Theorem | 44 |
| §2.4. Compound Matrices | 46 |
| Exercises | 49 |
| Chapter 3. Hermitian Matrices and Majorization | 51 |
| §3.1. Eigenvalues of Hermitian Matrices | 51 |
| §3.2. Majorization and Doubly Stochastic Matrices | 56 |
| §3.3. Inequalities for Positive Semidefinite Matrices | 68 |
| Exercises | 74 |
| Chapter 4. Singular Values and Unitarily Invariant Norms | 77 |
| §4.1. Singular Values | 77 |
| §4.2. Symmetric Gauge Functions | 88 |
| §4.3. Unitarily Invariant Norms | 90 |
| §4.4. The Cartesian Decomposition of Matrices | 97 |
| Exercises | 100 |
| Chapter 5. Perturbation of Matrices | 103 |
| §5.1. Eigenvalues | 103 |
| §5.2. The Polar Decomposition | 112 |
| §5.3. Norm Estimation of Band Parts | 114 |
| §5.4. Backward Perturbation Analysis | 116 |
| Exercises | 118 |
| Chapter 6. Nonnegative Matrices | 119 |
| §6.1. Perron-Frobenius Theory | 120 |
| §6.2. Matrices and Digraphs | 132 |
| §6.3. Primitive and Imprimitive Matrices | 134 |
| §6.4. Special Classes of Nonnegative Matrices | 138 |
| §6.5. Two Theorems about Positive Matrices | 142 |
| Exercises | 147 |
| Chapter 7. Completion of Partial Matrices | 149 |
| §7.1. Friedland's Theorem about Diagonal Completions | 150 |
| §7.2. Farahat-Ledermann's Theorem about Borderline Completions | 153 |
| §7.3. Parrott's Theorem about Norm-Preserving Completions | 157 |
| §7.4. Positive Definite Completions | 159 |
| Chapter 8. Sign Patterns | 165 |

| | |
|--|-----|
| §8.1. Sign-Nonsingular Patterns | 168 |
| §8.2. Eigenvalues | 169 |
| §8.3. Sign Semi-Stable Patterns | 173 |
| §8.4. Sign Patterns Allowing a Positive Inverse | 174 |
| Exercises | 179 |
| Chapter 9. Miscellaneous Topics | 181 |
| §9.1. Similarity of Real Matrices via Complex Matrices | 181 |
| §9.2. Inverses of Band Matrices | 182 |
| §9.3. Norm Bounds for Commutators | 184 |
| §9.4. The Converse of the Diagonal Dominance Theorem | 188 |
| §9.5. The Shape of the Numerical Range | 192 |
| §9.6. An Inversion Algorithm | 197 |
| §9.7. Canonical Forms for Similarity | 198 |
| §9.8. Extremal Sparsity of the Jordan Canonical Form | 207 |
| Chapter 10. Applications of Matrices | 213 |
| §10.1. Combinatorics | 214 |
| §10.2. Number Theory | 216 |
| §10.3. Algebra | 217 |
| §10.4. Geometry | 220 |
| §10.5. Polynomials | 222 |
| Unsolved Problems | 227 |
| Bibliography | 237 |
| Notation | 249 |
| Index | 251 |
