Part I. Insulin

CHAPTER 1

Insulin Chemistry

D. BRANDENBURG. With 1 Figure	3
A. Introduction	3
B. Analysis, Purification	3
I. HPLC	3
II. Isolation	4
III. Degradation	4
IV. Stability	5
C. Chemical and Enzymatic Modification, Semisynthesis	5
I. Modification of Amino Groups and NH ₂ Terminal Semisyntheses	5
II. Hydroxy Amino Acids	7
III. COOH Terminal Shortening and Semisynthesis	7
IV. Other Semisyntheses	9
V. Labeling	9
VI. Photoreactive Insulins	10
VII. Cross-linking	10
D. Chemical Synthesis of Insulin Analogs	11
I. Synthesis of A Chains	12
II. Synthesis of B Chains	12
III. Chain Combination	12
IV. Syntheses of Related Molecules	13
E. Biosynthesis by Recombinant DNA Techniques	13
I. Human Insulin	13
II. Analogs	14
F. Conclusions	14
References	15

CHAPTER 2

Insulin Structure

U. DEREWENDA, Z. S. DEREWENDA, G. G. DODSON, and R. E. HUBBARD With 6 Figures	23
A. Introduction	23

B. The Three-Dimensional Structure of the Insulin Molecule	24
I. The Insulin Monomer	24
II. The Insulin Dimer	27
III. The Insulin Hexamer	32
C. Structural Variation in the Insulin Molecule	36
D. Conclusions	38
References	38

CHAPTER 3

Mutant Human Insulins and Insulin Structure–Function Relationships

H. S. TAGER. With 5 Figures	41
A. Introduction	41
B. Structural Relationships Within the Human Insulin Gene and its Expressed Products	42
C. Abnormal Insulin Gene Products	45
I. Mutant Human Proinsulins and Processing Intermediates	45
II. Mutant Human Insulins	49
D. Insulin Structure–Function Relationships and Mutant Insulins	53
I. Substitutions at Position A3 (Insulin Wakayama)	55
II. Substitutions at Position B24 (Insulin Los Angeles)	55
III. Substitutions at Position B25 (Insulin Chicago)	56
E. Physiology, Genetics, and Clinical Aspects	59
F. Concluding Remarks	60
References	61

Part II. Biosynthesis, Secretion, and Degradation

CHAPTER 4

The Biosynthesis of Insulin

D. F. STEINER. With 8 Figures	67
A. Introduction	67
B. Insulin Precursors	68
I. Preproinsulin: Its Role in Insulin Biosynthesis	68
II. Structure and Properties of Proinsulin	69
III. Proinsulin is the Immediate Precursor of Insulin	71
C. Cell Biology of Insulin Biosynthesis	71
D. Mechanism of Conversion of Proinsulin to Insulin	73
E. Formation of Insulin Secretory Granules	75
F. The C-Peptide as a Product of Proinsulin Transformation	77
G. The Regulation of Insulin Production	79
H. The Insulin Gene Family	80
J. Defects in the Insulin Gene: The Insulinopathies	82
K. Summary	83
References	84

CHAPTER 5

Insulin Gene Regulation

M. D. WALKER. With 4 Figures	93
A. Overview	93
B. Introduction	93
C. Insulin Gene Structure	94
D. Experimental Approaches	95
I. Transient Assay	97
II. Stable Assay	97
III. Transgenic Animals	97
E. Identification of Control Sequences	98
I. Role of 5' Flanking DNA	98
II. Cell-Specific Enhancer and Promoter	99
III. Positive and Negative Control	100
IV. Regulation by Glucose	101
V. Systematic Mutagenesis	101
VI. Role of Other Sequences in Cell Specificity	103
VII. Biochemical Approaches	103
F. Expression During Development	104
G. Prospects	105
I. Biochemical	105
II. Genetic	106
III. Expression Library Screening	106
IV. Gene Therapy	107
References	108

CHAPTER 6

Regulation of Insulin Release by the Intracellular Mediators Cyclic AMP, Ca^{2+} , Inositol 1,4,5-Trisphosphate, and Diacylglycerol

W. J. MALAISSE	113
A. Introduction	113
B. Cyclic AMP	114
I. Cyclic AMP Synthesis and Breakdown	114
II. Mode of Action of Cyclic AMP	115
III. Physiological Role of Cyclic AMP	116
C. Calcium	116
I. Regulation of Ca^{2+} Fluxes in Islet Cells	117
II. Target Systems for Cytosolic Ca^{2+}	118
D. Inositol 1,4,5-Trisphosphate	119
E. Diacylglycerol	120
I. Generation of Diacylglycerol	120
II. Activation of Protein Kinase C	120
III. Functional Implications	121
F. Concluding Remarks	121
References	122

CHAPTER 7

The Role of Cholecystokinin and Other Gut Peptides on Regulation of Postprandial Glucose and Insulin Levels

R. J. RUSHAKOFF, R. A. LIDDLE, J. A. WILLIAMS, and I. D. GOLDFINE

With 10 Figures	125
A. Summary	125
B. Background	125
C. Incretin Criteria	126
D. Candidate Incretins	126
I. Glucose Insulinotropic Peptide	126
II. Secretin	127
III. Gastrin	128
IV. Vasoactive Inhibitory Peptide	128
V. Peptide Histidine Isoleucine and Peptide YY	128
VI. Enteroglucagon	129
E. An Established Incretin: Cholecystokinin	129
F. Conclusion	136
References	137

CHAPTER 8

Insulin-Degrading Enzyme

W. C. DUCKWORTH. With 3 Figures	143
A. Introduction	143
B. Substrate Specificity	147
C. Inhibition Studies	148
D. Subcellular Location	148
E. Tissue Distribution	151
F. Insulin Degradation Assays	151
G. Enzyme Products	155
H. Physiological Role of Insulin Protease	157
J. Other Insulin-Degrading Enzymes	158
I. Glutathione Insulin Transhydrogenase	158
II. High Molecular Weight Insulin-Degrading Enzyme	159
K. Future Studies	160
References	160

Part III. Insulin Receptor

CHAPTER 9

Insulin Receptor Structure

R. A. ROTH. With 3 Figures	169
A. Background	169
B. Early Glimpses of the Structure of the Insulin Receptor	169

C. Sequence of the Insulin Receptor	171
I. The α Subunit	171
II. The β Subunit	173
III. Domain Structure of the Insulin Receptor	175
D. Insulin Receptors in Different Tissues and Species	176
E. Concluding Remarks	177
References	178

CHAPTER 10

Insulin Receptor-Mediated Transmembrane Signalling

M. D. HOLLENBERG. With 2 Figures	183
A. Introduction	183
B. Mechanisms of Transmembrane Signalling	184
I. Signal Generation	184
II. Signal Amplification	185
III. Role of G Proteins	186
IV. Messengers	186
V. Receptor Dynamics and Transmembrane Signalling	187
VI. Feedback Regulation	191
C. Insulin-Mediated Transmembrane Signalling	191
I. Insulin Receptor Tyrosine Kinase Activity, Insulin Action, and Receptor Internalization	192
II. Receptor-Triggered Phosphorylation and Signalling	194
III. G Proteins and Insulin Action	195
IV. Interactions with Other Membrane Proteins	196
V. Low Molecular Weight Mediators of Insulin Action	197
VI. Receptor Internalization and Insulin Action	199
VII. Feedback Regulation and Insulin Action	200
D. Summary and Conclusions	200
References	201

CHAPTER 11

The Insulin Receptor Tyrosine Kinase

P. ROTHENBERG, M. F. WHITE, and C. R. KAHN. With 1 Figure	209
A. Introduction	209
B. Background	209
I. Purification of the Insulin Receptor Kinase	210
II. Role of Autophosphorylation in Insulin Receptor Kinase Function	212
III. Autophosphorylation	213
IV. Sites of β Subunit Autophosphorylation	216
V. Structural Requirements for Receptor Autophosphorylation	217
C. Substrates of the Receptor Kinase	220
I. In Vitro Substrates	220
II. In Vivo Substrates	222

D. Regulation of the Insulin Receptor Kinase	224
I. Possible Role of cAMP-Dependent Kinase	224
II. Role of Protein Kinase C	224
III. Role of Phospholipids	225
IV. Role of Interactions with Other Proteins	225
V. Physiological Aspects	226
References	226

CHAPTER 12

Receptor-Mediated Internalization and Turnover

J. R. LEVY and J. M. OLEFSKY. With 21 Figures	237
A. Introduction	237
B. The Insulin Receptor Itinerary	237
C. Insulin Processing and Dissociation	238
D. Insulin Degradation	243
E. Retroendocytosis	247
F. Insulin Receptor Processing	248
References	263

CHAPTER 13

Insulin-like Growth Factor I Receptors

S. JACOBS. With 2 Figures	267
A. Introduction	267
B. Hormonal Determinants of Binding and Specificity	269
I. D Peptide	271
II. C Peptide	272
III. B Peptide	272
IV. A Peptide	273
C. The Receptor Binding Site	274
D. Biological Responses	275
E. Tyrosine Kinase Activity	277
F. Receptor Heterogeneity	279
G. A Hybrid IGF-I Receptor	280
References	282

Part IV. Effect of Insulin on Cellular Metabolism

CHAPTER 14

Second Messengers of Insulin Action

A. R. SALTIEL and P. CUATRECASAS. With 4 Figures	289
A. Overview	289
B. Introduction	289

C. Biological Characterization of the Putative Insulin Second Messengers	292
I. Purification	292
II. Biological Activities	293
D. Chemical Characterization of the Enzyme Modulator as an Inositol Glycan	294
I. Similarity with the Glycosyl-PI Protein Anchor	294
II. Metabolic Labeling of the Inositol Glycan	296
E. Structure and Biosynthesis of Glycosyl-PI	298
I. Structural Studies	298
II. Relationship to the Glycosyl-PI Protein Anchor	298
F. Glycosyl-PI Hydrolysis is Catalyzed by an Insulin-Sensitive Glycosyl-PI-Specific Phospholipase C	299
I. Characterization of a Specific PLC	299
II. Coupling of the Insulin Receptor to the Glycosyl-PI-Specific PLC	300
III. Release of Glycosyl-PI-Anchored Proteins	301
G. The Role of Diacylglycerol in Insulin Action	302
H. Inositol Glycans as Second Messengers of Insulin Action	304
References	305

CHAPTER 15

Insulin Regulation of Protein Phosphorylation

J. AVRUCH, H. E. TORNQVIST, J. R. GUNSALUS, E. J. YURKOW,

J. M. KYRIAKIS, and D. J. PRICE. With 1 Figure 313

A. Introduction	313
B. Insulin-Stimulated Tyrosine Phosphorylation	314
I. Insulin Receptor β Subunit	315
II. Is Tyr Phosphorylation of Other Proteins the Next Step?	317
III. Strategies for the Detection of Physiologically Relevant Receptor Kinase Substrates	320
IV. Candidate Substrates for the Insulin Receptor Kinase	323
C. Insulin-Stimulated Ser/Thr Protein Phosphorylation	333
I. Insulin-Stimulated Ser/Thr Kinases	335
D. Insulin-Induced Dephosphorylation	346
I. Inhibition of Protein Kinase Activity	346
II. Activation of Protein Phosphatase	348
E. Conclusion	349
References	352

CHAPTER 16

Effects of Insulin on Glycogen Metabolism

J. LARNER. With 6 Figures 367

A. Introduction	367
---------------------------	-----

I. Historical	367
II. Research Approach	368
B. Experimental	369
I. Phosphorylation Sites of Glycogen Synthase	369
II. Decreased Phosphorylation of Glycogen Synthase with Insulin Action	370
III. Integration of Covalent and Allosteric Controls of Phosphorylase and Glycogen Synthase	371
IV. Emerging Significance of Multiple Phosphorylation	372
V. Insulin and Tissue cAMP Concentrations	372
VI. Insulin and cAMP-Dependent Protein Kinase: A Marker for Mediator	372
VII. Effects of Insulin on Other Kinases: A Potential Phosphorylation Cascade	374
VIII. Effects of Insulin on Phosphoprotein Phosphatases: A Mechanism for Dephosphorylation	375
IX. Purification and Action of Two Mediators: A Mechanism for Control of Dephosphorylation	375
X. Formation of Insulin Mediators	376
XI. Insulin Receptor Activation and Mediator Formation	380
C. Summary	380
References	381

CHAPTER 17

Insulin-Sensitive cAMP Phosphodiesterase

T. KONO. With 1 Figure	385
A. Introduction	385
B. Localization of Insulin-Sensitive Phosphodiesterase	385
C. Solubilization, Purification, and Characterization	386
D. Hormonal Stimulation and its Physiological Significance	388
E. Cell-Free Activation and Deactivation	391
I. Effects of Salts	391
II. Effects of Dithiothreitol at 37 °C	391
III. Effects of SH Blocking Agents	391
IV. Effects of a Mild Proteolysis	392
V. Effects of cGMP and cAMP	392
VI. Effects of GTP and ATP	392
VII. Effects of Phosphodiesterase-Specific Inhibitors	392
VIII. Effects of TPA (a Phorbol Ester)	393
IX. Effects of Phosphorylation	393
F. Possible Mechanisms of Insulin Action	394
I. Phosphorylation Theory	394
II. Mediator Theory	394
III. G Protein Theory	394
References	395

CHAPTER 18

Regulation of Gene Expression by Insulin

J.L. MESSINA. With 5 Figures	399
A. Introduction	399
B. Genes Inhibited by Insulin	401
I. Phosphoenolpyruvate Carboxykinase	401
II. Other Genes Inhibited by Insulin	402
C. Genes Induced by Insulin	403
I. <i>p33</i>	403
II. <i>c-fos</i> and <i>c-myc</i>	404
III. Glyceraldehyde-3-Phosphate Dehydrogenase	406
IV. Fatty Acid Synthase and Malic Enzyme	406
V. Pyruvate Kinase	406
VI. Ornithine Decarboxylase	407
VII. Other Hepatic Genes Induced by Insulin	407
VIII. Other Nonhepatic Genes Induced by Insulin	408
D. Genes Inhibited or Induced by Insulin	409
I. Albumin	409
II. Tyrosine Aminotransferase	412
E. Protein Kinase C and Insulin's Regulation of Gene Expression	413
F. Summary and Conclusions	414
References	415

CHAPTER 19

Insulin, Membrane Polarization, and Ionic Currents

K. ZIERLER. With 1 Figure	421
A. Insulin Effect on Membrane Potential	421
I. Some Pertinent Electrophysiology	421
II. Insulin Hyperpolarizes Skeletal Muscle	424
III. Insulin Hyperpolarizes Adipocytes	425
IV. Insulin Hyperpolarizes Myocardium	426
V. Insulin and Liver Membrane Potential	427
VI. Insulin and V_m of Other Cells	427
VII. A Tentative Conclusion About Insulin-Induced Hyperpolarization	428
B. Some Other Electrical Effects, Not on Striated Muscle	428
C. Insulin's Effect on V_m of Striated Muscle when K^+ Distribution Has Been Altered	429
D. The Immediate Mechanism by which Insulin Hyperpolarizes Skeletal Muscle	430
I. List of Candidates	430
II. The Pump as Candidate	431
III. Changes in Electrolyte Concentration	436
IV. Changes in Permeability Coefficients	437

E. Is Hyperpolarization a Step in the Transduction Chain Leading to Stimulated Glucose Uptake?	440
I. Criteria	440
II. Evidence that IIH is a Transduction Step Leading to Glucose Uptake	440
III. Evidence That IIH is Not a Transduction Step Leading to Glucose Uptake	441
IV. What May Be the Roles of IIH?	442
F. Insulin Effects on Some Voltage-Sensitive Currents	443
I. Voltage-Sensitive vs Resting Currents	443
II. Insulin Increases an Na^+ Current-Dependent K^+ Current	444
III. Insulin Decreases Both Ca^{2+} Currents in Rat Myoballs	444
IV. Functions of Insulin Effects on Voltage-Sensitive Channels	445
G. Electrical Steps in the Insulin Transduction Scheme	446
References	447

CHAPTER 20

Insulin Regulation of Metabolism Relevant to Gluconeogenesis

R. BRESSLER and J. J. BAHL. With 2 Figures	451
A. Introduction	451
B. Overview of Blood Glucose Regulation	451
C. Biochemical Pathways of Glycolysis and Gluconeogenesis	452
I. Enzymes of Glycolysis and Gluconeogenesis	452
II. Futile Cycles, Regulation by Enzyme Pairs	454
III. Hepatic Gluconeogenesis	454
D. Hormonal Regulation	455
I. Glucagon	455
II. Insulin Effects on Gluconeogenesis	457
III. Hepatic Gene Expression and Metabolic Zonation	461
References	462
Subject Index	469
