Members of the Working Group for Excavations	V
Preface	VII
Notes for the User	XI
1 Introduction	1
1.1 Engineering prerequisites for applying the Recommendations (R 1)	1
1.2 Governing regulations (R 76)	1
1.3 Safety factor approach (R 77)	4
1.4 Limit states (R 78)	6
1.5 Support of retaining walls (R 67)	9
1.6 Planning and examination of excavations (R 106)	10
2 Analysis principles	11
2.1 Actions (R 24)	11
2.2 Determination of soil properties (R 2)	13
2.3 Earth pressure angle (R 89)	15
2.4 Partial safety factors (R 79)	17
2.5 General requirements for adopting live loads (R 3)	18
2.6 Live loads from road and rail traffic (R 55)	20
2.7 Live loads from site traffic and site operations (R 56)	23
2.8 Live loads from excavators and lifting equipment (R 57)	24
3 Magnitude and distribution of earth pressure	29
3.1 Magnitude of earth pressure as a function of the selected construction method (R 8)	29
3.2 Magnitude of total active earth pressure lead without surcharge loads (R 4)	30
3.3 Distribution of active earth pressure without surcharges (R 5)	34
3.4 Magnitude of total active earth pressure lead from live loads (R 6)	37
3.5 Distribution of active earth pressure from live loads (R 7)	39
3.6 Superimposing earth pressure components with surcharges (R 71)	42
3.7 Determination of at-rest earth pressure (R 18)	44
3.8 Earth pressure in retreating states (R 68)	46

4	General stipulations for analysis	49
4.1	Stability analysis (R 81)	49
4.2	General information on analysis methods (R 11)	51
4.3	Determination and analysis of embedment depth (R 80)	54
4.4	Determination of action effects (R 82)	58
4.5	Modulus of subgrade reaction method (R 102)	61
4.6	Finite-element method (R 103).	66
4.7	Analysis of the vertical component of the mobilised passive earth pressure (R 9).	71
4.8	Analysis of the transfer of vertical forces into the subsurface (R 84).	73
4.9	Stability analyses for braced excavations in special cases (R 10).	76
4.10	Serviceability analysis (R 83)	78
4.11	Allowable simplifications in limit states GEO 2 or STR (R 104)	82
5	Analysis approaches for soldier pile walls	85
5.1	Determination of load models for soldier pile walls (R 12)	85
5.2	Pressure diagrams for supported soldier pile walls (R 69).	87
5.3	Soil reactions and passive earth pressure for soldier pile walls with free earth supports (R 14).	89
5.4	Fixed earth support for soldier pile walls (R 25)	91
5.5	Equilibrium of horizontal forces for soldier pile walls (R 15)	94
6	Analysis approaches for sheet pile walls and in-situ concrete walls	99
6.1	Determination of load models for sheet pile walls and in-situ concrete walls (R 16).	99
6.2	Pressure diagrams for supported sheet pile walls and in-situ concrete walls (R 70).	101
6.3	Ground reactions and passive earth pressure for sheet pile walls and in-situ concrete walls with free earth support (R 19)	103
6.4	Fixed earth support for sheet pile walls and in-situ concrete walls (R 26).	106
7	Anchored retaining walls	111
7.1	Magnitude and distribution of earth pressure for anchored retaining walls (R 42)	111
7.2	Analysis of force transfer from anchors to the ground (R 43).	112
7.3	Verification of stability at the lower failure plane (R 44)	113

7.4	Analysis of overall stability (R 45)	119
7.5	Measures to counteract deflections in anchored retaining walls (R 46).	122
8	Excavations with special ground plans.	125
8.1	Excavations with circular plan (R 73).	125
8.2	Excavations with oval plan (R 74).	130
8.3	Excavations with rectangular plan (R 75)	137
9	Excavations adjacent to structures	143
9.1	Engineering measures for excavations adjacent to structures (R 20).	143
9.2	Analysis of retaining walls with active earth pressure for excavations adjacent to structures (R 21)	145
9.3	Active earth pressure for large distances to structures (R 28).	147
9.4	Active earth pressure for small distances to structures (R 29)	149
9.5	Analysis of retaining walls with increased active earth pressure (R 22).	151
9.6	Analysis of retaining walls with at-rest earth pressure (R 23)	155
9.7	Mutual influence of opposing retaining walls for excavations adjacent to structures (R 30)	159
10	Excavations in water	163
10.1	General remarks on excavations in water (R 58)	163
10.2	Flow forces (R 59)	165
10.3	Dewatered excavations (R 60)	166
10.4	Analysis of hydraulic heave safety (R 61)	168
10.5	Analysis of buoyancy safety (R 62)	172
10.6	Stability analysis of retaining walls in water (R 63)	179
10.7	Design and construction of excavations in water (R 64).	183
10.8	Water management (R 65)	186
10.9	Monitoring excavations in water (R 66)	188
11	Excavations in unstable rock mass	189
11.1	General recommendations for excavation in unstable rock mass (R 38)	189
11.2	Magnitude of rock mass pressure (R 39)	192
11.3	Distribution of rock pressure (R 40).	194
11.4	Bearing capacity of rock mass for support forces at the embedment depth (R 41).	195

12	Excavations in soft soils	197
12.1	Scope of Recommendations R 91 to R 101 (R 90)	197
12.2	Slopes in soft soils (R 91)	198
12.3	Wall types in soft soils (R 92)	200
12.4	Construction procedure in soft soils (R 93)	204
12.5	Shear strength of soft soils (R 94)	208
12.6	Earth pressure on retaining walls in soft soils (R 95)	213
12.7	Ground reactions for retaining walls in soft soils (R 96)	217
12.8	Water pressure in soft soils (R 97)	222
12.9	Determination of embedment depths and action effects for excavations in soft soils (R 98)	228
12.10	Additional stability analyses for excavations in soft soils (R 99)	230
12.11	Water management for excavations in soft soils (R 100)	234
12.12	Serviceability of excavation structures in soft soils (R 101)	235
13	Analysis of the bearing capacity of structural elements.	239
13.1	Material parameters and partial safety factors for structural element resistances (R 88)	239
13.2	Bearing capacity of soldier pile infilling (R 47)	240
13.3	Bearing capacity of soldier piles (R 48)	243
13.4	Bearing capacity of sheet piles (R 49)	246
13.5	Bearing capacity of in-situ concrete walls (R 50)	248
13.6	Bearing capacity of waling (R 51)	250
13.7	Bearing capacity of struts (R 52)	251
13.8	Bearing capacity of trench lining (R 53)	254
13.9	Bearing capacity of provisional bridges and excavation covers (R 54)	255
13.10	External bearing capacity of soldier piles, sheet pile walls and in-situ concrete walls (R 85)	257
13.11	Bearing capacity of tension piles and ground anchors (R 86)	259
14	Measurements and monitoring on excavation structures.	261
14.1	Purpose of measurements and monitoring (R 31)	261
14.2	Measurands and measuring methods (R 32)	262
14.3	Measurement planning (R 33)	264
14.4	Location of measuring points (R 34)	266
14.5	Carrying out measurements and forwarding measurement results (R 35)	267
14.6	Evaluation and documentation of measurement results (R 36)	268

Annex	271
A 1: Relative density of cohesionless soils	271
A 2: Consistency of cohesive soils	272
A 3: Soil properties of cohesionless soils	273
A 4: Soil properties of cohesive soils	275
A 5: Geotechnical categories of excavations	277
A 6: Partial safety factors for geotechnical variables	279
A 7: Material properties and partial safety factors for concrete and reinforced concrete structural elements	281
A 8: Material properties and partial safety factors for steel structural elements	284
A 9: Material properties and partial safety factors for wooden structural elements	285
A 10: Empirical values for skin friction and base resistance of sheet pile walls.	286
Bibliography	287
Terms and notation	299
Geometrical variables.	299
Subsoil and soil parameters	299
Earth pressure and passive earth pressure	300
Further loads, forces and action effects	301
Analyses using the partial safety factor approach	301
Miscellany	302
Recommendations in numerical order	303
