## Contents

1	Introduction					
	1.1	Multivariate distributions	1			
	1.2	Correlation: Definition and Properties	3			
	1.3	Historical background	5			
	1.4	Some applications of correlations in finance	7			
	1.5	Correlation pitfalls	8			
	1.6	Extensions	10			
2	Maximum Likelihood estimation of correlation in the normal model					
	2.1	MLE with all parameters unknown	16			
	2.2	MLE with known means	19			
	2.3	MLE with known means and variances	19			
		2.3.1 Comparison of the introduced correlation estimators with em-				
		phasis on the small sample behaviour	27			
3	Correlation estimation based on daily OHLC data					
	3.1 The framework of Brownian Motion		34			
		3.1.1 Definition and Properties	34			
		3.1.2 Close returns, range and balanced excess returns	39			
	3.2	Correlation estimation using daily OHLC data	48			
		3.2.1 Volatility estimation using daily OHLC data	48			
		3.2.2 Correlation estimation based on Brandt-Diebold approach $\ldots$	54			
		3.2.3 Correlation estimation following Rogers-Zhou approach	58			
		3.2.4 Correlation estimation based on both approaches	68			
	3.3	Simulation study	70			
		3.3.1 Discussion on the weights of Rogers-Zhou-based estimators	70			

		3.3.2	Comparison of the correlation estimators under the BM as-
			sumption
		3.3.3	Robustness check
4	Cor	relatio	n estimation based on high-frequency data 99
	4.1	High-f	requency data
		4.1.1	Microstructure noise
		4.1.2	Sampling schemes
		4.1.3	Price models in the context of high-frequency data 105
	4.2	Volati	lity estimators
		4.2.1	Realized Volatility
		4.2.2	Realized Range
	4.3	Covar	ance/correlation estimators
		4.3.1	Realized Covariance
		4.3.2	Realized Co-Rauge
		4.3.3	BER-based correlation estimators
		4.3.4	Simulation study with high-frequency data
5	Em	pirical	study on properties of the BER-based estimator 139
5	<b>Em</b> j 5.1	-	study on properties of the BER-based estimator 139

	6.5	Setup of the empirical study	. 165		
	6.6	Results	. 167		
7	7 Conclusion				
A	Theoretical results				
	A.1	Roots of a cubic equation	. 179		
	A.2	Mean and variance of the r-zero estimator	. 180		
	A.3	Asymptotic distribution of the ML estimator with known means $\ .$ .	. 181		
	A.4	Correlation of the increments of constructed BMs $\ \ldots \ \ldots \ \ldots$	. 182		
	A.5	Construction of a bivariate normal distribution	. 183		
	A.6	Moments of multivariate log-normal rvs	. 183		
	A.7	Generating function of High, Low and Close	. 184		
	A.8	Covariances, variances and correlations of (pairs between) CR, range			
		and BER and their squares	185		
	A.9	Derivation of the means of cross products in a bivariate BM $\ .$	. 186		
	A.10	Variance of certain volatility estimates based on daily OHLC data $\ .$	. 187		
	A.11	Bounds of Brandt-Diebold-Parkinson's estimator	. 188		
	A.12	Rogers-Zhou matrix	. 188		
	A.13	Unbiasedness and consistency of the realized variance $\ldots$ $\ldots$ $\ldots$	. 189		
	A.14	Unbiasedness and consistency of the realized covariance	. 189		
	A.15	Solution of the optimization problem in (6.7)	190		
	A.16	Solution of the optimization problem in (6.11)	191		
	A.17	GARCH(1,1) Model	191
