1	Introduction	1
2	Fundamentals	5
2.1	Proteins and Lysozyme	5
2.2	Polyethylene Glycol and PEGylation	6
2.3	Chromatographic Purification of Proteins	7
2.3.1	Hydrophobic Interaction Chromatography	8
2.3.2	Size Exclusion Chromatography	8
2.4	Isothermal Titration Calorimetry	9
3	Experiments and Methods	11
3.1	Chemicals	11
3.2	Adsorbent	11
3.3	Equilibrium Adsorption Isotherms	11
3.3.1	Protein	11
3.3.2	Polyethylene Glycol	12
3.4	Isothermal Titration Calorimetry	13
3.5	Pulse Response Experiments	14
4	Theory	15
4.1	Equilibrium Model	15
4.2	Thermodynamic Analysis	15
4.3	Evaluation of ITC Experiments	15
4.4	Evaluation of Pulse Response Experiments	16
4.5	Van't Hoff Analysis	17
5	Influence of Ammonium Sulfate	19
5.1	Equilibrium Adsorption Isotherms	20
5.1.1	PEGylated lysozyme	20
5.1.2	Pure PEG	21
5.1.3	Comparison of Pure PEG and PEGylated Lysozyme	22
5.1.4	Comparison of Different PEG Chain Lengths	23

5.1.5	Ammonium Sulfate Concentration	23
5.2	Molar Enthalpy of Adsorption	25
5.2.1	PEGylated lysozyme	25
5.2.2	Thermodynamic Analysis	27
5.2.3	Pure PEG	27
5.2.4	Comparison of Pure PEG and PEGylated Lysozyme	28
5.2.5	Ammonium Sulfate Concentration	29
5.3	Conclusion	30
6	Influence of Sodium Chloride	33
6.1	Equilibrium Adsorption Isotherms	34
6.1.1	PEGylated Lysozyme	34
6.1.2	Pure PEG	35
6.1.3	Sodium Chloride Concentration	36
6.2	Molar Enthalpy of Adsorption	37
6.2.1	PEGylated Lysozyme	37
6.2.2	Pure PEG	39
6.2.3	Comparison of Native Lysozyme, PEGylated Lysozymes and Pure PEGs	39
6.2.4	Sodium Chloride Concentration	41
6.2.5	Thermodynamic Analysis	41
6.3	Comparison with Influence of Ammonium Sulfate	42
6.4	Conclusion	43
7	Influence of Mixed Electrolytes	45
7.1	Equilibrium Adsorption Isotherms	46
7.2	Data for $q_p(c_p = 0.01\text{mM})$	47
7.2.1	Ammonium Sulfate and Sodium Chloride	48
7.2.2	Sodium Sulfate and Ammonium Chloride	50
7.2.3	Ammonium Sulfate and Ammonium Chloride	51
7.2.4	Sodium Sulfate and Sodium Chloride	52
7.2.5	Sodium Sulfate and Ammonium Sulfate	52
7.2.6	Sodium Chloride and Ammonium Chloride	53
7.3	Model	54
7.3.1	Reduced Coordinates for Representing Mixed Electrolytes	55
7.3.2	Mathematical Model	55
7.3.3	Determination of Model Parameters	57
7.3.4	PEG-6kDa	58
7.3.5	Lysozyme	59

7.3.6	Di-PEG-lysozyme-5kDa	60
7.3.7	Comparison	61
7.4	Conclusion	62
8	Influence of Temperature	63
8.1	Equilibrium Adsorption Isotherms	65
8.2	Enthalpy of Adsorption	66
8.3	Pulse Response Experiments	67
8.4	Comparison of $\Delta h_p^{\text{ads}\infty}$ Obtained from Different Methods	68
8.5	Discrepancies Between Data Obtained from Van't Hoff Analysis and from ITC	71
8.6	Conclusion	75
9	Summary	77
	Literature	79
	Appendix	85
A	Ammonium Sulfate	85
A.1	Equilibrium Adsorption Isotherms	85
A.1.1	Lysozyme	85
A.1.2	Mono-PEG-lysozyme-5kDa	86
A.1.3	Di-PEG-lysozyme-5kDa	88
A.1.4	Tri-PEG-lysozyme-5kDa	91
A.1.5	Mono-PEG-lysozyme-10kDa	92
A.1.6	Di-PEG-lysozyme-10kDa	93
A.1.7	Tri-PEG-lysozyme-10kDa	94
A.1.8	PEG-6kDa	95
A.1.9	PEG-12kDa	96
A.2	Parameters of the Colloidal Model	97
A.3	Enthalpy of Adsorption	99
B	Sodium Chloride	101
B.1	Equilibrium Adsorption Isotherms	101
B.1.1	Lysozyme	101
B.1.2	Mono-PEG-lysozyme-5kDa	102
B.1.3	Di-PEG-lysozyme-5kDa	103
B.1.4	Tri-PEG-lysozyme-5kDa	104
B.1.5	Mono-PEG-lysozyme-10kDa	105
B.1.6	Di-PEG-lysozyme-10kDa	106

B.2	Parameters of the Colloidal Model	107
B.3	Enthalpy of Adsorption	109
C	Mixed Electrolytes	111
C.1	Equilibrium Adsorption Isotherms	111
C.1.1	Binary System Ammonium Sulfate - Sodium Chloride	111
C.1.2	Binary System Sodium Sulfate - Ammonium Chloride	114
C.1.3	Binary System Ammonium Sulfate - Ammonium Chloride	117
C.1.4	Binary System Sodium Sulfate - Sodium Chloride	120
C.1.5	Binary System Sodium Sulfate - Ammonium Sulfate	123
C.1.6	Binary System Sodium Chloride - Ammonium Chloride	126
C.1.7	Ternary Salt Mixtures	129
C.2	Parameters of the Colloidal Model	135
C.3	Enthalpy of Adsorption	138
C.4	Discussion of the Mathematical Model	140
D	Numerical Experimental Data	141
