|          |  |            |
|----------|--|------------|
| <b>1</b> | <b>Two Fundamental Laws of Nature . . . . .</b>          | <b>1</b>   |
| 1.1      | Types of Work . . . . .                                  | 1          |
| 1.2      | The Postulates of Kelvin and Clausius . . . . .          | 15         |
| 1.3      | Carnot's Engine and Temperature . . . . .                | 16         |
| 1.4      | Entropy . . . . .  | 22         |
| <b>2</b> | <b>Thermodynamic Functions . . . . .</b>                 | <b>27</b>  |
| 2.1      | Internal Energy and Enthalpy . . . . .                   | 27         |
| 2.2      | Simple Applications . . . . .                            | 29         |
| 2.3      | Free Energy and Free Enthalpy . . . . .                  | 54         |
| 2.4      | Extensive and Intensive Quantities . . . . .             | 68         |
| <b>3</b> | <b>Equilibrium and Stability . . . . .</b>               | <b>73</b>  |
| 3.1      | Equilibrium and Stability via Maximum Entropy . . . . .  | 73         |
| 3.2      | Chemical Potential and Chemical Equilibrium . . . . .    | 80         |
| 3.3      | Applications Involving Chemical Equilibrium . . . . .    | 90         |
| <b>4</b> | <b>Simple Phase Diagrams . . . . .</b>                   | <b>125</b> |
| 4.1      | Van Der Waals Theory . . . . .                           | 125        |
| 4.2      | Beyond Van Der Waals Theory . . . . .                    | 140        |
| 4.3      | Low Molecular Weight Mixtures . . . . .                  | 155        |
| 4.4      | Phase Equilibria in Macromolecular Systems . . . . .     | 164        |
| <b>5</b> | <b>Microscopic Interactions . . . . .</b>                | <b>173</b> |
| 5.1      | The Canonical Ensemble . . . . .                         | 173        |
| 5.2      | Generalized Ensembles . . . . .                          | 201        |
| 5.3      | Grand-Canonical Ensemble . . . . .                       | 205        |
| 5.4      | The Third Law of Thermodynamics . . . . .                | 217        |
| <b>6</b> | <b>Thermodynamics and Molecular Simulation . . . . .</b> | <b>221</b> |
| 6.1      | Metropolis Sampling . . . . .                            | 221        |
| 6.2      | Sampling Different Ensembles . . . . .                   | 225        |
| 6.3      | Selected Applications . . . . .                          | 227        |

|   |            |
|---|------------|
| <b>7 Non-Equilibrium Thermodynamics . . . . .</b>                                       | <b>239</b> |
| 7.1 Linear Irreversible Transport . . . . .   | 240        |
| 7.2 Entropy Production . . . . .  | 250        |
| 7.3 Complexity in Chemical Reactions . . . . .  | 263        |
| 7.4 Remarks on Evolution . . . . .  | 273        |
| <b>Appendix A: The Mathematics of Thermodynamics . . . . .</b>                          | <b>281</b> |
| <b>Appendix B: Grand-Canonical Monte Carlo:</b><br><b>Methane on Graphite . . . . .</b> | <b>289</b> |
| <b>Appendix C: Constants, Units, Tables . . . . .</b>                                   | <b>293</b> |
| <b>Index . . . . .</b>  | <b>299</b> |
