Part I An Introductory Course in Stochastic Processes

1	Some Classes of Discrete-Time Stochastic Processes	3
1.1	Discrete-Time Stochastic Processes	3
1.1.1	Conditional Expectations and Filtrations	3
1.2	Discrete-Time Markov Chains	6
1.2.1	An Introductory Example	6
1.2.2	Definitions and Examples	7
1.2.3	Chapman-Kolmogorov Equations	10
1.2.4	Long-Range Behavior	12
1.3	Discrete-Time Martingales	12
1.3.1	Definitions and Examples	12
1.3.2	Stopping Times and Optional Stopping Theorem	17
1.3.3	Doob's Decomposition	21
2	Some Classes of Continuous-Time Stochastic Processes	23
2.1	Continuous-Time Stochastic Processes	23
2.1.1	Generalities	23
2.1.2	Continuous-Time Martingales	24
2.2	The Poisson Process and Continuous-Time Markov Chains	24
2.2.1	The Poisson Process	27
2.2.2	Two-State Continuous Time Markov Chains	31
2.2.3	Birth-and-Death Processes	33
2.3	Brownian Motion	33
2.3.1	Definition and Basic Properties	34
2.3.2	Random Walk Approximation	35
2.3.3	Second Order Properties	36
2.3.4	Markov Properties	36
2.3.5	First Passage Times of a Standard Brownian Motion	38
2.3.6	Martingales Associated with Brownian Motion	39
2.3.7	First Passage Times of a Drifted Brownian Motion	42
2.3.8	Geometric Brownian Motion	43

- 3 Elements of Stochastic Analysis 45**
 - 3.1 Stochastic Integration 45
 - 3.1.1 Integration with Respect to a Symmetric Random Walk . . . 45
 - 3.1.2 The Itô Stochastic Integral for Simple Processes 46
 - 3.1.3 The General Itô Stochastic Integral 49
 - 3.1.4 Stochastic Integral with Respect to a Poisson Process 51
 - 3.1.5 Semimartingale Integration Theory (*) 51
 - 3.2 Itô Formula 53
 - 3.2.1 Introduction 53
 - 3.2.2 Itô Formulas for Continuous Processes 54
 - 3.2.3 Itô Formulas for Processes with Jumps (*) 57
 - 3.2.4 Brackets (*) 60
 - 3.3 Stochastic Differential Equations (SDEs) 62
 - 3.3.1 Introduction 62
 - 3.3.2 Diffusions 63
 - 3.3.3 Jump-Diffusions (*) 69
 - 3.4 Girsanov Transformations 71
 - 3.4.1 Girsanov Transformation for Gaussian Distributions 71
 - 3.4.2 Girsanov Transformation for Poisson Distributions 73
 - 3.4.3 Abstract Bayes Formula 75
 - 3.5 Feynman-Kac Formulas (*) 75
 - 3.5.1 Linear Case 75
 - 3.5.2 Backward Stochastic Differential Equations (BSDEs) 76
 - 3.5.3 Nonlinear Feynman-Kac Formula 77
 - 3.5.4 Optimal Stopping 78

Part II Pricing Equations

- 4 Martingale Modeling 83**
 - 4.1 General Setup 85
 - 4.1.1 Pricing by Arbitrage 86
 - 4.1.2 Hedging 95
 - 4.2 Markovian Setup 102
 - 4.2.1 Factor Processes 103
 - 4.2.2 Markovian Reflected BSDEs and Obstacles PIDE Problems 104
 - 4.2.3 Hedging Schemes 106
 - 4.3 Extensions 108
 - 4.3.1 More General Numéraires 108
 - 4.3.2 Defaultable Derivatives 111
 - 4.3.3 Intermittent Call Protection 119
 - 4.4 From Theory to Practice 121
 - 4.4.1 Model Calibration 121
 - 4.4.2 Hedging 121
- 5 Benchmark Models 123**
 - 5.1 Black-Scholes and Beyond 123

- 5.1.1 Black–Scholes Basics 123
- 5.1.2 Heston Model 126
- 5.1.3 Merton Model 127
- 5.1.4 Bates Model 127
- 5.1.5 Log–Spot Characteristic Functions in Affine Models 127
- 5.2 Libor Market Model of Interest-Rate Derivatives 130
 - 5.2.1 Black Formula 130
 - 5.2.2 Libor Market Model 132
 - 5.2.3 Caps and Floors 133
 - 5.2.4 Adding Correlation 134
 - 5.2.5 Swaptions 136
 - 5.2.6 Model Simulation 137
- 5.3 One-Factor Gaussian Copula Model of Portfolio Credit Risk 138
 - 5.3.1 Credit Derivatives 139
 - 5.3.2 Gaussian Copula Model 140
- 5.4 Benchmark Models in Practice 144
 - 5.4.1 Implied Parameters 144
 - 5.4.2 Implied Delta-Hedging 146
- 5.5 Vanilla Options Fourier Transform Pricing Formulas 150
 - 5.5.1 Fourier Calculus 150
 - 5.5.2 Black–Scholes Type Pricing Formula 151
 - 5.5.3 Carr–Madan Formula 153

Part III Numerical Solutions

- 6 Monte Carlo Methods 161**
 - 6.1 Uniform Numbers 161
 - 6.1.1 Pseudo-Random Generators 162
 - 6.1.2 Low-Discrepancy Sequences 164
 - 6.2 Non-uniform Numbers 166
 - 6.2.1 Inverse Method 166
 - 6.2.2 Gaussian Pairs 167
 - 6.2.3 Gaussian Vectors 169
 - 6.3 Principles of Monte Carlo Simulation 170
 - 6.3.1 Law of Large Numbers and Central Limit Theorem 170
 - 6.3.2 Standard Monte Carlo Estimator and Confidence Interval . 170
 - 6.4 Variance Reduction 171
 - 6.4.1 Antithetic Variables 171
 - 6.4.2 Control Variates 172
 - 6.4.3 Importance Sampling 173
 - 6.4.4 Efficiency Criterion 174
 - 6.5 Quasi Monte Carlo 175
 - 6.6 Greeking by Monte Carlo 176
 - 6.6.1 Finite Differences 176
 - 6.6.2 Differentiation of the Payoff 177
 - 6.6.3 Differentiation of the Density 177

6.7	Monte Carlo Algorithms for Vanilla Options	178
6.7.1	European Call, Put or Digital Option	178
6.7.2	Call on Maximum, Put on Minimum, Exchange or Best of Options	179
6.8	Simulation of Processes	182
6.8.1	Brownian Motion	182
6.8.2	Diffusions	184
6.8.3	Adding Jumps	186
6.8.4	Monte Carlo Simulation for Processes	188
6.9	Monte Carlo Methods for Exotic Options	188
6.9.1	Lookback Options	190
6.9.2	Barrier Options	192
6.9.3	Asian Options	193
6.10	American Monte Carlo Pricing Schemes	194
6.10.1	Time-0 Price	195
6.10.2	Computing Conditional Expectations by Simulation	196
7	Tree Methods	199
7.1	Markov Chain Approximation of Jump-Diffusions	199
7.1.1	Kushner's Theorem	199
7.2	Trees for Vanilla Options	201
7.2.1	Cox–Ross–Rubinstein Binomial Tree	201
7.2.2	Other Binomial Trees	206
7.2.3	Kamrad–Ritchken Trinomial Tree	206
7.2.4	Multinomial Trees	207
7.3	Trees for Exotic Options	208
7.3.1	Barrier Options	208
7.3.2	Bermudan Options	209
7.4	Bidimensional Trees	210
7.4.1	Cox–Ross–Rubinstein Tree for Lookback Options	210
7.4.2	Kamrad–Ritchken Tree for Options on Two Assets	210
8	Finite Differences	213
8.1	Generic Pricing PIDE	213
8.1.1	Maximum Principle	214
8.1.2	Weak Solutions	215
8.2	Numerical Approximation	216
8.2.1	Finite Difference Methods	216
8.2.2	Finite Elements and Beyond	218
8.3	Finite Differences for European Vanilla Options	220
8.3.1	Localization and Discretization in Space	220
8.3.2	Theta-Schemes in Time	222
8.3.3	Adding Jumps	226
8.4	Finite Differences for American Vanilla Options	229
8.4.1	Splitting Scheme	229
8.5	Finite Differences for Bidimensional Vanilla Options	230

8.5.1	ADI Scheme	231
8.6	Finite Differences for Exotic Options	233
8.6.1	Lookback Options	233
8.6.2	Barrier Options	234
8.6.3	Asian Options	235
8.6.4	Discretely Path Dependent Options	237
9	Calibration Methods	243
9.1	The Ill-Posed Inverse Calibration Problem	243
9.1.1	Tikhonov Regularization of Nonlinear Inverse Problems	244
9.1.2	Calibration by Nonlinear Optimization	247
9.2	Extracting the Effective Volatility	247
9.2.1	Dupire Formula	248
9.2.2	The Local Volatility Calibration Problem	250
9.3	Weighted Monte Carlo	254
9.3.1	Approach by Duality	256
9.3.2	Relaxed Least Squares Approach	257
 Part IV Applications		
10	Simulation/Regression Pricing Schemes in Diffusive Setups	261
10.1	Market Model	262
10.1.1	Underlying Stock	262
10.1.2	Convertible Bond	264
10.2	Pricing Equations and Their Approximation	265
10.2.1	Stochastic Pricing Equation	266
10.2.2	Markovian Case	267
10.2.3	Generic Simulation Pricing Schemes	268
10.2.4	Convergence Results	270
10.3	American and Game Options	272
10.3.1	No Call	272
10.3.2	No Protection	274
10.3.3	Numerical Experiments	275
10.4	Continuously Monitored Call Protection	277
10.4.1	Vanilla Protection	278
10.4.2	Intermittent Vanilla Protection	280
10.4.3	Numerical Experiments	282
10.5	Discretely Monitored Call Protection	283
10.5.1	“ <i>l</i> Last” Protection	284
10.5.2	“ <i>l</i> Out of the Last <i>d</i> ” Protection	285
10.5.3	Numerical Experiments	287
10.5.4	Conclusions	291
11	Simulation/Regression Pricing Schemes in Pure Jump Setups	293
11.1	Generic Markovian Setup	294
11.1.1	Generic Simulation Pricing Scheme	295
11.2	Homogeneous Groups Model of Portfolio Credit Risk	296

11.2.1	Hedging in the Homogeneous Groups Model	297
11.2.2	Simulation Scheme	299
11.3	Pricing and Greeks Results in the Homogeneous Groups Model	299
11.3.1	Fully Homogeneous Case	300
11.3.2	Semi-Homogeneous Case	302
11.4	Common Shocks Model of Portfolio Credit Risk	305
11.4.1	Example	308
11.4.2	Marshall-Olkin Representation	309
11.5	CVA Computations in the Common Shocks Model	310
11.5.1	Numerical Results	312
11.5.2	Conclusions	319
Part V	Jump-Diffusion Setup with Regime Switching (**)	
12	Backward Stochastic Differential Equations	323
12.1	General Setup	323
12.1.1	Semimartingale Forward SDE	326
12.1.2	Semimartingale Reflected and Doubly Reflected BSDEs	328
12.2	Markovian Setup	334
12.2.1	Dynamics	336
12.2.2	Mapping with the General Set-Up	338
12.2.3	Cost Functionals	339
12.2.4	Markovian Decoupled Forward Backward SDE	340
12.2.5	Financial Interpretation	342
12.3	Study of the Markovian Forward SDE	343
12.3.1	Homogeneous Case	344
12.3.2	Inhomogeneous Case	348
12.4	Study of the Markovian BSDEs	351
12.4.1	Semigroup Properties	354
12.4.2	Stopped Problem	355
12.5	Markov Properties	358
13	Analytic Approach	359
13.1	Viscosity Solutions of Systems of PIDEs with Obstacles	359
13.2	Study of the PIDEs	362
13.2.1	Existence	362
13.2.2	Uniqueness	363
13.2.3	Approximation	365
14	Extensions	369
14.1	Discrete Dividends	369
14.1.1	Discrete Dividends on a Derivative	369
14.1.2	Discrete Dividends on Underlying Assets	371
14.2	Intermittent Call Protection	373
14.2.1	General Setup	374
14.2.2	Marked Jump-Diffusion Setup	377
14.2.3	Well-Posedness of the Markovian RIBSDE	379

14.2.4 Semigroup and Markov Properties 382
 14.2.5 Viscosity Solutions Approach 384
 14.2.6 Protection Before a Stopping Time Again 385

Part VI Appendix

15 Technical Proofs ()** 391
 15.1 Proofs of BSDE Results 391
 15.1.1 Proof of Lemma 12.3.6 391
 15.1.2 Proof of Proposition 12.4.2 392
 15.1.3 Proof of Proposition 12.4.3 396
 15.1.4 Proof of Proposition 12.4.7 397
 15.1.5 Proof of Proposition 12.4.10 399
 15.1.6 Proof of Theorem 12.5.1 400
 15.1.7 Proof of Theorem 14.2.18 403
 15.2 Proofs of PDE Results 405
 15.2.1 Proof of Lemma 13.1.2 405
 15.2.2 Proof of Theorem 13.2.1 405
 15.2.3 Proof of Lemma 13.2.4 410
 15.2.4 Proof of Lemma 13.2.8 416

16 Exercises 421
 16.1 Discrete-Time Markov Chains 421
 16.2 Discrete-Time Martingales 421
 16.3 The Poisson Process and Continuous-Time Markov Chains 423
 16.4 Brownian Motion 423
 16.5 Stochastic Integration 424
 16.6 Itô Formula 424
 16.7 Stochastic Differential Equations 425

17 Corrected Problem Sets 427
 17.1 Exit of a Brownian Motion from a Corridor 427
 17.2 Pricing with a Regime-Switching Volatility 428
 17.3 Hedging with a Regime-Switching Volatility 431
 17.4 Jump-to-Ruin 434
