

CHAPTER 1 PROBLEM SOLVING WITH MATHEMATICAL MODELS 1

- 1.1 OR Application Stories 1
- 1.2 Optimization and the Operations Research Process 3
- 1.3 System Boundaries, Sensitivity Analysis, Tractability and Validity 8
- 1.4 Descriptive Models and Simulation 11
- 1.5 Numerical Search and Exact versus Heuristic Solutions 14
- 1.6 Deterministic versus Stochastic Models 16
- 1.7 Perspectives 19
- Exercises 20**

***CHAPTER 2 DETERMINISTIC OPTIMIZATION MODELS
IN OPERATIONS RESEARCH 23***

- 2.1 Decision Variables, Constraints, and Objective Functions 23
- 2.2 Graphic Solution and Optimization Outcomes 27
- 2.3 Large-Scale Optimization Models and Indexing 39
- 2.4 Linear and Nonlinear Programs 46
- 2.5 Discrete or Integer Programs 52
- 2.6 Multiobjective Optimization Models 59
- 2.7 Classification Summary 63
- Exercises 64**

CHAPTER 3 IMPROVING SEARCH 77

- 3.1 Improving Search, Local and Global Optima 77
- 3.2 Search with Improving and Feasible Directions 88
- 3.3 Algebraic Conditions for Improving
and Feasible Directions 99
- 3.4 Unimodal and Convex Model Forms Tractable
for Improving Search 109

3.5 Searching and Starting Feasible Solutions 118
Exercises 127

CHAPTER 4 LINEAR PROGRAMMING MODELS 131

- 4.1 Allocation Models 131
- 4.2 Blending Models 135
- 4.3 Operations Planning Models 139
- 4.4 Shift Scheduling and Staff Planning Models 148
- 4.5 Time-Phased Models 153
- 4.6 Models with Linearizable Nonlinear Objectives 157
- Exercises 164

CHAPTER 5 SIMPLEX SEARCH FOR LINEAR PROGRAMMING 175

- 5.1 LP Optimal Solutions and Standard Form 175
- 5.2 Extreme-Point Search and Basic Solutions 186
- 5.3 The Simplex Algorithm 197
- 5.4 Dictionary and Tableau Representations of Simplex 207
- 5.5 Two Phase Simplex 211
- 5.6 Degeneracy and Zero-Length Simplex Steps 220
- 5.7 Convergence and Cycling with Simplex 224
- 5.8 Doing It Efficiently: Revised Simplex 225
- 5.9 Simplex with Simple Upper and Lower Bounds 238
- Exercises 245

CHAPTER 6 INTERIOR POINT METHODS FOR LINEAR PROGRAMMING 251

- 6.1 Searching through the Interior 251
- 6.2 Scaling with the Current Solution 262
- 6.3 Affine Scaling Search 269
- 6.4 Log Barrier Methods for Interior Point Search 275
- 6.5 Dual and Primal-Dual Extensions 287
- Exercises 293

CHAPTER 7 DUALITY AND SENSITIVITY IN LINEAR PROGRAMMING 299

- 7.1 Generic Activities versus Resources Perspective 299
- 7.2 Qualitative Sensitivity to Changes in Model Coefficients 304
- 7.3 Quantifying Sensitivity to Changes in LP Model Coefficients: A Dual Model 315
- 7.4 Formulating Linear Programming Duals 324
- 7.5 Primal-to-Dual Relationships 329
- 7.6 Computer Outputs and What If Changes of Single Parameters 338

7.7 Bigger Model Changes, Reoptimization, and Parametric Programming 354

Exercises 363

CHAPTER 8 *MULTIOBJECTIVE OPTIMIZATION AND GOAL PROGRAMMING* 373

- 8.1 Multiobjective Optimization Models 373
- 8.2 Efficient Points and the Efficient Frontier 378
- 8.3 Preemptive Optimization and Weighted Sums of Objectives 384
- 8.4 Goal Programming 389

Exercises 400

CHAPTER 9 *SHORTEST PATHS AND DISCRETE DYNAMIC PROGRAMMING* 409

- 9.1 Shortest Path Models 409
- 9.2 Dynamic Programming Approach to Shortest Paths 417
- 9.3 Shortest Paths From One Node to All Others: Bellman-Ford 426
- 9.4 Shortest Paths From All Nodes to All Others: Floyd-Warshall 433
- 9.5 Shortest Path From One Node to All Others With Costs Nonnegative: Dijkstra 440
- 9.6 Shortest Paths From One Node to All Others in Acyclic Digraphs 446
- 9.7 CPM Project Scheduling and Longest Paths 450
- 9.8 Discrete Dynamic Programming Models 458

Exercises 468

CHAPTER 10 *NETWORK FLOWS* 475

- 10.1 Graphs, Networks, and Flows 475
- 10.2 Cycle Directions for Network Flow Search 483
- 10.3 Rudimentary Cycle Direction Search Algorithms for Network Flows 494
- 10.4 Integrality of Optimal Network Flows 500
- 10.5 Transportation and Assignment Models 502
- 10.6 Other Single-Commodity Network Flow Models 511
- 10.7 Network Simplex Algorithm for Optimal Flows 519
- 10.8 Cycle Canceling Algorithms for Optimal Flows 529
- 10.9 Multicommodity and Gain/Loss Flows 536

Exercises 543

CHAPTER 11 DISCRETE OPTIMIZATION MODELS 555

- 11.1 Lumpy Linear Programs and Fixed Charges 555
- 11.2 Knapsack and Capital Budgeting Models 560
- 11.3 Set Packing, Covering, and Partitioning Models 566
- 11.4 Assignment and Matching Models 574
- 11.5 Traveling Salesman and Routing Models 584
- 11.6 Facility Location and Network Design Models 594
- 11.7 Processor Scheduling and Sequencing Models 602
- Exercises 613**

CHAPTER 12 DISCRETE OPTIMIZATION METHODS 627

- 12.1 Solving by Total Enumeration 627
- 12.2 Relaxations of Discrete Optimization Models and Their Uses 630
- 12.3 Stronger LP relaxations, Valid Inequalities, and Lagrangian Relaxations 641
- 12.4 Branch and Bound Search 651
- 12.5 Rounding, Parent Bounds, Enumerations Sequences, and Stopping Early in Branch and Bound 664
- 12.6 Improving Search Heuristics for Discrete Optimization INLPs 680
- 12.7 Tabu, Simulated Annealing, and Genetic Algorithm Extensions of Improving Search 687
- 12.8 Constructive Heuristics 698
- Exercises 705**

CHAPTER 13 UNCONSTRAINED NONLINEAR PROGRAMMING 715

- 13.1 Unconstrained Nonlinear Programming Models 715
- 13.2 One-Dimensional Search 726
- 13.3 Derivatives, Taylor Series, and Conditions for Local Optima 737
- 13.4 Convex/Concave Functions and Global Optimality 749
- 13.5 Gradient Search 757
- 13.6 Newton's Method 761
- 13.7 Quasi-Newton Methods and BFGS Search 766
- 13.8 Optimization without Derivatives and Nelder-Mead 774
- Exercises 781**

CHAPTER 14 CONSTRAINED NONLINEAR PROGRAMMING 787

- 14.1 Constrained Nonlinear Programming Models 787
- 14.2 Convex, Separable, Quadratic and Posynomial Geometric Programming Special NLP Forms 795
- 14.3 Lagrange Multiplier Methods 810

14.4	Karush–Kuhn–Tucker Optimality Conditions	817
14.5	Penalty and Barrier Methods	827
14.6	Reduced Gradient Algorithms	837
14.7	Quadratic Programming Methods	849
14.8	Separable Programming Methods	858
14.9	Posynomial Geometric Programming Methods	866
	Exercises	875

SELECTED ANSWERS 887
