<i>Preface and acknowledgments</i>	<i>page</i>	<i>xiii</i>
1 Introduction		1
Health research as a public-interest cause		1
Privacy protection as a public-interest cause		3
Health data vulnerability		4
The challenges		4
2 Data, biospecimens, and research		7
A few essential notions		7
The e-health revolution		10
Data and databases		11
Biospecimen collections		13
Public research resource platforms		18
Degrees of sensitivity		18
Data and biospecimen ownership		22
What is research, anyway?		24
3 Privacy, confidentiality, safeguards		29
Privacy		29
Confidentiality		33
Safeguards		34
4 Broad privacy and data protection regimes		35
The plethora of controls		35
Two sorts of regimes		36
Early concerns about computers and privacy		36
The OECD privacy principles		38
Council of Europe Convention 108		40
The European strategy		40
The US approach		47
The Canadian strategy		48
Australia, Japan, APEC		49
5 Healthcare, public health, and research regimes		52
Healthcare and payment regimes		52
Public health regimes		53

	Human-subject protection regimes	54
	Clinical trial and product postmarketing regimes	57
	Other, specialized laws and regulations	59
	Research ethics review systems	60
	“Rules” thickets in four countries	62
6	Consent	67
	Consent as it is applied now	69
	Legitimately sought, meaningfully informed, willingly granted	71
	The casting of consent	74
	Right to withdraw	78
	Community engagement	79
	Searching for research candidates	80
	Research without consent	81
	Some reflections	84
7	Identifiability and person-specific data	87
	“Personal data”	87
	Identifiers	92
	De-identification for research	93
	Ways non-identified data can become identified	96
	Retaining the possibility to re-identify	98
	The HIPAA Privacy Rule approach	99
	Key-coding	104
	Identifiability terminology	105
	Identifiable to whom?	107
	No personal data: no human subject?	108
	Some reflections	109
8	Genetics and genomics	111
	Genetics/genomics	112
	GWAS	114
	EHR-driven genomic discovery	115
	Genotype-driven recruitment	115
	Notice and consent	116
	Genetic and genomic identifiability	118
	The Personal Genome Project	121
	Some reflections	122
9	Safeguards and responsibilities	125
	Operational safeguards	125
	Formal responsibilities	126
	Stewardship	129
	Data and biospecimen retention	129
	Security	130
	Privacy risk assessment	131
	Requests for non-research access	132
	Enforcement and sanctions	135

10	Data sharing, access, and transfer	138
	Data sharing	138
	Access	140
	The two basic modes of access	140
	Access agreements	141
	Terms of restricted access	142
	Privacy-preserving data linkage	146
	Extremely restricted access	149
	Oversight and governance	151
	International transfer	152
	Some reflections	156
11	Ways forward	158
	<i>Bibliography</i>	160
	<i>Index</i>	176
