

# Contents

<b>1</b>	<b>Introduction to Stochastic Processes</b>	<b>1</b>
1.1	The Kolmogorov Consistency Theorem	1
1.2	The Language of Stochastic Processes	11
1.3	Sigma Fields, Measurability, and Stopping Times	14
	<i>Exercises</i>	17
<b>2</b>	<b>Brownian Motion</b>	<b>19</b>
2.1	Definition and Construction of Brownian Motion	20
2.2	Essential Features of a Brownian Motion	27
2.3	The Reflection Principle	34
	<i>Exercises</i>	39
<b>3</b>	<b>Elements of Martingale Theory</b>	<b>41</b>
3.1	Definition and Examples of Martingales	41
3.2	Wiener Martingales and the Markov Property	44
3.3	Essential Results on Martingales	49
3.4	The Doob-Meyer Decomposition	54
3.5	The Meyer Process for $L^2$ -martingales	67
3.6	Local Martingales	71
	<i>Exercises</i>	73
<b>4</b>	<b>Analytical Tools for Brownian Motion</b>	<b>75</b>
4.1	Introduction	75
4.2	The Brownian Semigroup	76
4.3	Resolvents and Generators	79
4.4	Pregenerators and Martingales	87
	<i>Exercises</i>	89
<b>5</b>	<b>Stochastic Integration</b>	<b>90</b>
5.1	The Itô Integral	90
5.2	Properties of the Integral	98
5.3	Vector-valued Processes	105
5.4	The Itô Formula	106

5.5	An Extension of the Itô Formula	111
5.6	Applications of the Itô Formula	113
5.7	The Girsanov Theorem	124
	<i>Exercises</i>	132
<b>6</b>	<b>Stochastic Differential Equations</b>	<b>134</b>
6.1	Introduction	134
6.2	Existence and Uniqueness of Solutions	137
6.3	Linear Stochastic Differential Equations	144
6.4	Weak Solutions	146
6.5	Markov Property	153
6.6	Generators and Diffusion Processes	161
	<i>Exercises</i>	164
<b>7</b>	<b>The Martingale Problem</b>	<b>166</b>
7.1	Introduction	166
7.2	Existence of Solutions	174
7.3	Analytical Tools	183
7.4	Uniqueness of Solutions	189
7.5	Markov Property of Solutions	193
7.6	Further Results on Uniqueness	196
<b>8</b>	<b>Probability Theory and Partial Differential Equations</b>	<b>202</b>
8.1	The Dirichlet Problem	202
8.2	Boundary Regularity	212
8.3	Kolmogorov Equations: The Heuristics	218
8.4	Feynman-Kac Formula	221
8.5	An Application to Finance Theory	223
8.6	Kolmogorov Equations	224
	<i>Exercises</i>	239
<b>9</b>	<b>Gaussian Solutions</b>	<b>240</b>
9.1	Introduction	241
9.2	Hilbert-Schmidt Operators	245
9.3	The Gohberg-Krein Factorization	248
9.4	Nonanticipative Representations	252
9.5	Gaussian Solutions of Stochastic Equations	257
	<i>Exercises</i>	265
<b>10</b>	<b>Jump Markov Processes</b>	<b>266</b>
10.1	Definitions and Basic Results	266
10.2	Stochastic Calculus for Processes with Jumps	271
10.3	Jump Markov Processes	275
10.4	Diffusion Approximation	283
	<i>Exercises</i>	290

<b>11 Invariant Measures and Ergodicity</b>	<b>292</b>
11.1 Introduction	293
11.2 Ergodicity for One-dimensional Diffusions	295
11.3 Invariant Measures for $d$ -dimensional Diffusions	301
11.4 Existence and Uniqueness of Invariant Measures	304
11.5 Ergodic Measures	310
<i>Exercises</i>	314
<b>12 Large Deviations Principle for Diffusions</b>	<b>315</b>
12.1 Definitions and Basic Results	316
12.2 Large Deviations and Laplace-Varadhan Principle	318
12.3 A Variational Representation Theorem	329
12.4 Sufficient Conditions for LDP	338
<i>Exercises</i>	341
<i>Notes on Chapters</i>	343
<i>References</i>	347
<i>Index</i>	351
