<b>Foreword</b>	<b>xv</b>
<b>Preface</b>	<b>xvii</b>
<b>Contributors</b>	<b>xix</b>
<b>1 Sugarcane: The Crop, the Plant, and Domestication</b>	<b>1</b>
Summary	1
Introduction	1
Singular Properties of the Genus <i>Saccharum</i> and Its Members	2
Secondary and Tertiary Gene Pools, Germplasm Resources	7
Evolution and Improvement of Sugarcanes	9
References	15
<b>2 Anatomy and Morphology</b>	<b>19</b>
Summary	19
Introduction	19
Plant Morphology	20
The Culm	20
The Leaf	26
The Inflorescence	29
The Root	30
Conclusion	32
References	33
<b>3 Developmental Stages (Phenology)</b>	<b>35</b>
Summary	35
Introduction	35
Stages of Development	38
Development of Roots	48
Molecular Control of Development	49
Conclusions	50
Acknowledgment	50
References	50
<b>4 Ripening and Postharvest Deterioration</b>	<b>55</b>
Summary	55
Abbreviations List	55

Natural Ripening	55
Chemical Ripening	61
Postharvest Deterioration	72
References	79
<b>5 Mineral Nutrition of Sugarcane</b>	<b>85</b>
Summary	85
Introduction	85
Introductory Concepts in Plant Nutrition	85
Primary Nutrients	87
Secondary Nutrients	97
Minor Nutrients	102
Beneficial Element	109
Toxic Element	112
Novel Applications of Genetic Manipulation to Plant Nutrition	113
Acknowledgments	115
References	115
<b>6 Photosynthesis in Sugarcane</b>	<b>121</b>
Summary	121
Introduction	121
C <sub>4</sub> Photosynthesis—Agronomic and Ecological Significance	122
The Biochemistry of C <sub>3</sub> and C <sub>4</sub> Photosynthesis	124
Environmental Physiology	131
Photosynthetic Capacity in Sugarcane	147
Conclusion	149
References	149
<b>7 Respiration as a Competitive Sink for Sucrose Accumulation in Sugarcane Culm: Perspectives and Open Questions</b>	<b>155</b>
Summary	155
Introduction	155
Toward Understanding Respiration and Plant Yield in Sugarcane	157
Transcriptional Regulation of Respiration	163
Identifying Core Genes Involved in Posttranscriptional Regulation of Respiratory Flux in Sugarcane	163
Conclusions	164
References	165
<b>8 Nitrogen Physiology of Sugarcane</b>	<b>169</b>
Summary	169
Introduction	169
Setting the Scene: Nitrogen in the Sugarcane Crop System	173
Microbial Associations and Symbioses for Nitrogen Acquisition	174
Nitrogen and Sugarcane Productivity	176
Nitrogen Assimilation and Agronomic Gains	182
Improving Nitrogen Use Efficiency through Genetic Engineering	189
Conclusions	190
References	190

<b>9</b>	<b>Water Relations and Cell Expansion of Storage Tissue</b>	<b>197</b>
	Summary	197
	Introduction	197
	Properties of Water, Cell Walls, and Cell Membranes	198
	Applying Principles of Water Relations to Sugarcane	198
	Plastic versus Elastic Cell Expansion	200
	Water-Potential Isotherms	202
	Estimating Apoplastic Volume in Sugarcane	203
	Sugarcane Culm Growth and Development	204
	Early Model of Sucrose Accumulation in Culm Tissue	205
	Apoplastic Sucrose	205
	Sugarcane Species Comparisons	213
	Conclusion	217
	References	218
<b>10</b>	<b>Water, Transpiration, and Gas Exchange</b>	<b>221</b>
	Summary	221
	Abbreviation List	221
	The Challenge of Gas Exchange	223
	The Properties of Water	226
	Transport of Liquid Water	227
	Transport of Water Vapor	233
	Stomatal Regulation of Water Loss	237
	Conclusion	248
	References	249
<b>11</b>	<b>Transport Proteins in Plant Growth and Development</b>	<b>255</b>
	Summary	255
	Transport Basics	255
	Facilitated Diffusion	256
	Active Transporters	256
	Ion Transport	259
	Membrane Transport in the Context of Whole Plant Physiology	259
	Functional Analysis of Transport Proteins	262
	Conclusion	263
	References	263
<b>12</b>	<b>Phloem Transport of Resources</b>	<b>267</b>
	Summary	267
	Introduction	267
	General Principles and Concepts of Resource Transport in the Phloem	268
	Phloem Transport of Resources in Sugarcane	277
	Acknowledgments	298
	References	298
<b>13</b>	<b>Cell Walls: Structure and Biogenesis</b>	<b>307</b>
	Summary	307
	Introduction	307
	Distinctive Features of Sugarcane Cell Wall Composition	310

Major Cell Wall Constituents	311
Expansive Growth of the Cell Wall	323
Grass Cell Walls as Forage and Biofuel Feedstock	324
Closing Remarks	325
References	325
<b>14 Hormones and Growth Regulators</b>	<b>331</b>
Summary	331
Introduction	331
Auxin	332
Gibberellins	339
Cytokinins	344
Ethylene	350
Abscisic Acid	355
Strigolactones	360
Brassinosteroids	362
Jasmonates	365
Salicylic Acid	366
Peptide Hormones Including Florigen	369
Perspective	373
References	373
<b>15 Flowering</b>	<b>379</b>
Summary	379
Introduction	380
Developmental Phases	380
Repeatability of Flowering Date	381
Seasonality	381
Latitudinal Distribution of Flowering Types	383
Photoperiodism	383
Minimum Number of Initiating Photoperiodic Cycles	385
Photoperiodic Ecotypes and Heritability of the Photoperiod Response	385
Effect of Light Intensity and Quality	387
Effect of Temperature	387
Effect of Plant Water and Nutrient Status	389
Role of Leaves	390
Biochemical Signaling, the Flowering Hormone	391
Development	392
Flowering Control: The Breeders' Viewpoint	393
Photoperiod Facilities—Design Considerations	399
Synchronization for Hybridization	400
Flowering Control: The Growers' Viewpoint	402
References	406
<b>16 Stress Physiology: Abiotic Stresses</b>	<b>411</b>
Summary	411
Introduction	411
Abiotic Stresses: Basic Concepts	412
Water Stress	413

Salinity Stress	422
Sodicity	424
Temperature Stress	425
Waterlogging and Flooding Tolerance	427
Signal Perception, Transduction and Gene Regulation Associated with Abiotic Stresses	428
Toward Engineering Abiotic Stress Tolerance in Sugarcane	429
References	430
<b>17 Mechanisms of Resistance to Pests and Pathogens in Sugarcane and Related Crop Species</b>	<b>435</b>
Summary	435
Abbreviation List	435
Introduction	436
Forms of Resistance	438
Plant Defense Hormones	444
Resistance at the Surface	445
Cell Wall Strengthening	447
Soluble Phenolics	451
Terpenes	456
Nonprotein, N-based Defense	457
Protein-based Defense	461
Indirect Defense	468
Defense Theory and the Cost of Defense to Plants	472
Priming of Resistance	474
Perspectives	475
References	476
<b>18 Source and Sink Physiology</b>	<b>483</b>
Summary	483
Introduction	483
General Principles of Source–Sink Physiology	485
Communication from Source to Sink: Role of Sugars and Transport Mechanisms	491
Interactions between Source Activity and Sucrose Accumulation in Sugarcane	495
Regulation of Source Activity	499
Interpretation of Approaches to Increase Sugar Accumulation in Sugarcane	503
Sugar Sensing and Signalling: Potential Targets	506
Source–Sink Relations in Changing Climates	509
Concluding Comments: Future Directions and Relevance	512
References	513
<b>19 Biomass and Bioenergy</b>	<b>521</b>
Summary	521
Introduction	521
Biorefineries for Bioenergy and Biomaterials	524
Bioenergy Feedstock Crops	526
Life-cycle Environmental Effects	530
Sugarcane: An Established Biomass and Bioenergy Crop	531
Energycane	532
Bioethanol	534

	Lignocellulose for Second Generation Bioenergy	535
	Promises and Problems of Sugarcane Cell Wall in Second Generation Bioethanol	535
	Biotechnology Potentials for Bioenergy	536
	Conclusions	537
	References	538
<b>20</b>	<b>Crop Models</b>	<b>541</b>
	Summary	541
	Abbreviation List	541
	Introduction	542
	Basic Concepts for Simulating Aspects of the Soil-Plant-Atmosphere System	544
	Sugarcane Process Models	550
	Representation of Sugarcane Physiology in Process Models	562
	The Potential of Crop Modeling to Enhance Sugarcane Genetic Improvement	565
	Functional Models	569
	Conclusion	571
	References	571
<b>21</b>	<b>Sugarcane Yields and Yield-Limiting Processes</b>	<b>579</b>
	Summary	579
	Introduction	580
	Canopy Development (LAI)	581
	Radiation Interception	588
	Photosynthesis	590
	RUE	590
	Dry Matter Partitioning	591
	Potential, Attainable, and Actual Yields	594
	References	598
<b>22</b>	<b>Systems Biology and Metabolic Modeling</b>	<b>601</b>
	Summary	601
	Introduction to Systems Biology	601
	The Metabolic Kinetic Model	604
	Metabolic Control Analysis	608
	Kinetic Modeling of Plant Physiology	609
	Modeling Sugarcane Physiology	611
	The Future of Kinetic Modeling in the Context of the Omics Era	619
	References	620
<b>23</b>	<b>Sugarcane Genetics and Genomics</b>	<b>623</b>
	Summary	623
	Introduction	623
	Genetic Diversity	624
	Molecular Cytogenetics	625
	Genetic Mapping	627
	Mapping Quantitative Trait Loci	629
	Quantitative Genetics and Breeding	630
	Map-Based Cloning: The Example of the Rust Resistance Gene	634
	EST Resources	635

Conservation and Collinearity in the Genome Structure of Sugarcane and Its Close Relatives	637
Prospects	638
References	639
<b>24 Sugarcane Biotechnology: Axenic Culture, Gene Transfer, and Transgene Expression</b>	<b>645</b>
Summary	645
Tissue Culture	645
Gene Transfer	654
Transgene Expression and Gene Silencing	669
When Genomics Meet Transgenics	673
Applications of Transgenic Sugarcane	673
References	674
