1	Introduction	1
2	Bremsstrahlung in Collisions of Structureless Charged Particles with Atoms and Ions	17
2.1	Peculiar Features of PBrS	17
2.2	Non-Relativistic Distorted Partial Waves Approximation	26
2.2.1	DPWA Series for BrS Amplitude	26
2.2.2	BrS Cross Section	31
2.3	Multipole Series for PBrS Cross Section	33
2.4	BrS Spectrum in the Tip Region	35
3	Polarizational Bremsstrahlung in Collisions with Hydrogen Atom	39
3.1	Generalized Dipole Dynamic Polarizability of a Hydrogen Atom	39
3.2	BrS Cross Section in Collisions with Hydrogen Atom	42
3.3	BrS in Collisions of a Slow Charged Particle with an Excited Hydrogen Atom	44
3.3.1	Adiabatic Approximation	45
3.3.2	Bremsstrahlung Amplitude	48
3.3.3	Cross Section	50
3.3.4	Averaging Procedure	53
3.3.5	Appendix	54
3.4	BrS in Electron and Positron Collision with Positronium	56
4	Cross Section of PBrS from Many-Electron Atoms and Ions	61
4.1	Spectral Distribution of BrS in Vicinity of Giant Resonances	61
4.2	Angular Distribution and Polarization of BrS	68
4.3	Approximate Method to Calculate the PBrS Cross Sections with Account for Many-Electron Correlations	71
4.3.1	Description of the Method	72
4.3.2	Numerical Results	73

4.4	Influence of Photon Absorption and Electron Energy Loss on the PBrS Spectrum in a Solid-State Target.	77
4.4.1	Energy Distribution of Scattered Electrons.	77
4.4.2	Numerical Results and Experimental Data.	79
4.5	BrS Spectra in Broad Range of Photon Energies.	81
4.6	'Stripping' Approximation	85
4.6.1	De-screening of an Atom in the BrS Process	85
4.6.2	The 'Stripping' Effect Beyond the Born Approximation	88
4.6.3	Alternative Approach to the 'Stripping' Effect	91
4.6.4	Numerical Results.	93
4.6.5	Experimental Results.	96
4.7	Bethe Ridge in the PBrS Process.	98
4.7.1	Contributions of Various Radiative Processes to the Total Spectrum	98
4.7.2	Analysis of the Bethe Peculiarity in PBrS	102
4.7.3	Numerical Results.	103
4.8	Polarizational Mechanism in Electron–Ion Radiative Capture	105
4.8.1	Qualitative Description of the Radiative Capture Channels for Multi-Electron Ionic Targets	107
4.8.2	Formalism	109
4.8.3	Numerical Results.	115
5	PBrS in Non-Relativistic Collisions of Structural Particles with Atoms and Ions	121
5.1	Introductory Notes.	121
5.2	Collisions of Fast Atomic Particles	122
5.2.1	BrS Amplitude	122
5.2.2	BrS Cross Section.	127
5.2.3	Numerical Example: BrS in He + Xe Collision	129
5.3	Effect of Coherence and Total Cross Section of BrS	131
5.4	Polarizational BrS of Inner Electron Shells.	133
5.4.1	Scaling Behaviour for the Inner-Shell PBrS Cross Section	135
5.4.2	Numerical Results.	136
5.5	BrS in Slow Collisions of Atomic Particles	139
5.5.1	BrS Amplitude	139
5.5.2	BrS Cross Section.	142
5.5.3	Hydrogen-Like System	144
5.5.4	Molecular Orbital X-Rays	149

6	Relativistic Effects in the Polarizational BrS Process	151
6.1	Introductory Notes	151
6.2	“Elastic” BrS in Atom–Atom Collisions	153
6.2.1	BrS Amplitude	154
6.2.2	BrS Cross Section	161
6.3	Electron-Atom Collisions	167
6.3.1	BrS Amplitude in a Relativistic Collision	167
6.3.2	Characteristics of PBrS	169
6.3.3	Total BrS Spectrum	172
6.4	Inelastic Collisions. Coherence Effect	174
6.4.1	Amplitude of “Inelastic” PBrS	174
6.4.2	Spectral-Angular Distribution of PBrS	176
6.4.3	Spectral Distribution of PBrS	183
6.5	Relativistic Effects Due to Internal Structure of Particles	185
6.5.1	Amplitude of PBrS	186
6.5.2	Limiting Cases of the Relativistic PBrS Amplitude	193
6.5.3	Cross Section of PBrS	194
6.5.4	Numerical Results	199
6.5.5	Appendix A: Relativistic DPWA Formalism for PBrS	205
6.5.6	Appendix B: Generalized Polarizabilities Expressed in Terms of Relativistic Green’s Function	209
7	PBrS from Atomic Clusters and Fullerenes	211
7.1	Introduction	211
7.2	Plasmon Resonance Approximation	212
7.2.1	Polarizabilities of Metal Clusters and Fullerenes	213
7.2.2	BrS Cross Section	217
7.2.3	BrS in Electron–Fullerene Collisions	223
7.2.4	Electron–Metal-Cluster Collisions	226
7.3	Calculation of PBrS Cross Section by Means of Many-Body Theory	229
7.4	Radiative Electron Capture by Metal Clusters	234
7.4.1	Cross Section of Radiative Capture	235
7.4.2	Numerical Results for Na_{20}^+ and Ag_{11}^+	238
7.4.3	Non-Radiative Capture by Means of Many-Body Theory	240
8	Conclusion	245
9	References	247
