LIST OF TABLES	7
LIST OF FIGURES AND MAPS	8
SUMMARY	9
1. INTRODUCTION	17
1.1 Objectives	17
1.2 General description of the area	19
1.2.1 Location, physiography and geology	19
1.2.2 Climate	20
1.2.3 Vegetation, land use and agriculture	21
1.2.4 Social and economic background	22
2. THE SOILS OF THE MAYBAR AREA	23
2.1 Methods	23
2.1.1 Field survey	23
2.1.2 Laboratory methods	25
2.2 Soil formation and distribution patterns	28
2.2.1 Soil formation factors	28
2.2.2 Soil distribution patterns	29
2.3 Soil map legend and soil mapping units	33
2.4 Description of the soil units: classification, evolution, physical and chemical conditions	35
2.4.1 Haplic Phaeozems	35
2.4.2 Lithosols	39
2.4.3 Mollic Gleysols	42
2.4.4 Eutric Fluvisols	44
2.4.5 Eutric Regosols	45
2.5 Erodibility	47
2.5.1 General remarks	47
2.5.2 Erodibility in the Maybar area	48
2.6 Soil moisture conditions of a Haplic Phaeozem	50
2.6.1 Introduction	50
2.6.2 Permeability	50
2.6.3 Soil moisture retention curve	51
2.6.4 Tensiometer soil moisture records	52
3. LAND SUITABILITY EVALUATION	61
3.1 Methods	61
3.1.1 Existing land evaluation systems	61
3.1.2 A land evaluation system for the Maybar area	63
3.2 Requirements of the land use system	74
3.2.1 Selection and description of the land utilization types	74
3.2.2 Requirements of the selected land utilization types	74
3.2.3 Definition of the major soil conservation types	75
3.3 Natural resources	76
3.3.1 Introduction	76
3.3.2 Conclusions of the soil survey	77

3.4	Land suitability classification of the Maybar area	81
3.4.1	Introduction	81
3.4.2	Moderately to marginally suitable (S2)	85
3.4.3	Currently not suitable (N1)	86
3.4.4	Permanently not suitable (N2)	87
3.4.5	Climatic aspects	88
4.	PROPOSAL FOR AN AGROECOLOGICAL DEVELOPMENT PLAN	89
4.1	General remarks	89
4.2	Pedoecological conditions	89
4.3	Socio-economic aspects	94
4.3.1	Socio-economic consequences of the ecological situation	94
4.3.2	Opinions of the farmers concerning agricultural problems and improvements	94
4.3.3	Local work resources for the realization of improvements	96
4.3.4	Conclusions of the socio-economic aspects	97
4.4	Conclusions: Integration of soil conservation, soil improvements, protection of unsuitable land, and further development activities	99
5.	PROSPECTS	101
5.1	Introduction	101
5.2	Scenario 1	102
5.3	Scenario 2	105
5.4	Scenario 3	106
5.5	Summary of the prospects	107
6.	COMPARISON WITH THE PEDOECOLOGICAL SITUATION IN OTHER AREAS OF THE ETHIOPIAN HIGHLANDS	109
6.1	Gununo/Sidamo	109
6.1.1	Introduction	109
6.1.2	The soils of the Gununo/Sidamo area, their formation, and distribution patterns	110
6.1.3	Impact of soil erosion on the fertility of a Eutric Nitosol	115
6.1.4	Erodibility in the Gununo/Sidamo area	117
6.1.5	Conclusions and recommendations for land use and soil management in the Gununo area	119
6.1.6	Comparison of Maybar/Wello with the Gununo/Sidamo area	121
6.2	Hunde Lafto/Harerge	125
6.2.1	Introduction	125
6.2.2	The soils of the Hunde Lafto / Harerge area	126
6.2.3	Land suitability, conclusions and recommendations for land use and soil management in the Hunde Lafto / Harerge area	128
6.2.4	Comparison of Maybar/Wello with Hunde Lafto / Harerge area	133
7.	REFERENCES	135
8.	APPENDICES	141
8.1	Profile descriptions, sketches, diagrams and results of the laboratory analyses	141
8.2	Various	157
