Preface	lxxxiii
About the Book	lxxxv
Acknowledgments	lxxxvii
Author	lxxxix
1. Microscopy	1
1.1 Introduction	1
1.2 Light Microscopy	1
1.3 Atomic Force Microscopy	5
1.4 Bright Field Microscopy	5
1.5 Dark Ground Microscopy	7
1.6 Phase Contrast Microscopy	7
1.7 Confocal Scanning Laser Microscopy	8
1.8 Differential Interference Contrast Microscopy	9
1.9 Polarization Microscopy	10
1.10 Fluorescence Microscopy	10
1.10.1 Antibodies Can Be Used to Detect Specific Molecules by Fluorescence Microscopy	10
1.11 Experiments on Microscopy	14
1.11.1 Introduction	14
1.11.2 Microscope Operation	15
1.11.3 Smear Preparation	16
1.11.4 Dyes	18
1.11.5 Staining Procedure	18
1.11.6 Microscopic Examination of Microorganisms	19
1.11.7 Hanging Drop Technique	19
1.11.8 Hemocytometer	20
1.11.9 Ocular Meter and Stage Micrometer for Micrometry	20
1.12 Electron Microscopy	21
1.12.1 Transmission Electron Microscopy	21

1.12.2	Scanning Electron Microscopy	24
1.12.3	Scanning Tunneling Microscope	25
1.13	Sample Preparation for Electron Microscopy	26
1.13.1	Preparation of Specimen Supports	27
1.13.1.1	Glow Discharge	29
1.13.1.2	Polylysine Procedure	29
1.13.2	Sample Preparation and Contrast Enhancement	30
1.13.3	Embedding, Sectioning, and Staining	30
1.13.3.1	Replica Formation	31
1.13.3.2	Freeze-Etching and the Critical Point Technique	31
1.13.3.3	Freeze-Fracture	32
1.13.3.4	Shadow-Casting	32
1.13.3.5	Negative Contrast Technique	34
1.13.3.6	Positive Staining	35
1.13.3.7	Kleinschmidt Spreading with Positive Staining and Rotary Shadowing	35
1.13.3.8	Special Protocol Used with the Kleinschmidt Technique	38
1.13.4	Visualization of Nucleic Acid Protein Complexes on Polylysine Films	38
1.13.5	Improving the Quality of the Image and Image Reconstruction	38
1.13.6	Minimal Beam Exposure	39
1.13.7	Three-Dimensional Reconstruction of Molecular Structure from Unstained Sample	39
1.13.8	Image Rotation and Rotational Filtering	40
1.13.9	Special Mechanisms of Image Formation	40
1.14	Dark Field Electron Microscopy	40
1.15	Crewe Microscope	41
1.16	Backscatter Scanning Microscope	41
1.17	Experiment on Scanning Electron Microscopy of Cyanobacteria	41
1.18	Transmission Electron Microscopy of Phages (Bacteriophage and Cyanophage)	42
	Suggested Readings	44
	Important Links	46
2.	Microtome	47
2.1	Introduction	47
2.2	Sectioning	47
2.3	Traditional Histology	48
2.3.1	Fixation, Dehydration, Embedding, and Staining	48
2.3.1.1	Fixation	49
2.3.1.2	Dehydration	50
2.3.1.3	Embedding	50
2.3.1.4	Staining	52
2.4	Ultramicrotome	52
2.5	Cryostat	53
2.5.1	Tissue Chilling	54
2.5.1.1	Apparatus and Materials	54
2.5.1.2	Protocol	54

2.5.2	Tissue Mounting	55
2.5.3	Preparation for Sectioning	55
2.5.4	Cryosectioning	56
2.5.5	Section Picking	60
2.6	Incubation	60
2.6.1	Methods of Incubation	60
2.6.2	Microcell Method	60
2.7	Electron Microscopy Technique	63
2.7.1	Special Preparation for Electron Microscope	63
2.7.1.1	Metal Shadowing	64
2.7.1.2	Freeze-Fracture and Freeze-Etch Electron Microscopy	65
2.7.1.3	Spectroscopy (Especially FTIR or Infrared Spectroscopy)	66
2.8	Botanical Microtomy	66
2.9	Processing of Tissue	67
2.9.1	Methods of Tissue Processing	67
2.9.2	Fixatives	68
2.9.3	Staining Procedures	69
2.9.4	Fixation, Dehydration, Embedding, and Staining	73
2.9.4.1	Introduction	73
2.9.4.2	Material Preparation	74
2.9.4.3	Material Required	74
2.9.4.4	Protocol	75
	Suggested Readings	80
	Important Links	80
3.	pH and Buffers	81
3.1	Introduction	81
3.2	Acids and Bases	81
3.2.1	Definitions	81
3.2.1.1	Acids and Bases	81
3.2.1.2	Alkali	82
3.2.1.3	Ampholytes	82
3.2.2	Strength	83
3.2.2.1	Strong Acids or Bases	83
3.2.2.2	Weak Acids or Bases	83
3.3	Hydrogen Ion Concentration and pH	83
3.3.1	Definition of pH	83
3.3.2	Water Dissociation	83
3.3.2.1	Temperature and K_w	84
3.3.3	Dissociation of Acids and Bases	84
3.3.3.1	Strong Acids	84
3.3.3.2	Weak Acids	85
3.4	Measurement of pH	86
3.4.1	pH Indicators	86
3.4.2	Measurement of pH	87
3.4.2.1	Glass Electrode	87
3.4.2.2	Calomel Electrode	87

3.5	Titration Curves	88
3.5.1	Strong Acid and a Strong Base	88
3.5.2	Weak Acid and a Strong Base	89
3.6	Buffer Solutions	89
3.6.1	Theory	89
3.7	What Is the pH of a Mixture of 5 mL of 0.1 mol/L Sodium Acetate and 4 mL of 0.1 mol/L Acetic Acid?	90
3.8	How the pH Changed on Adding 1 mL of 0.1 mol/L HCl in the Previous Mixture	90
3.9	Buffers Used in Biochemical Experiments	91
3.9.1	Common Laboratory Buffers	91
3.9.1.1	Bicarbonate	91
3.9.1.2	Phosphate	91
3.9.1.3	Tris	92
3.9.1.4	Zwitterionic Buffers	92
3.10	pH and Life	92
3.10.1	Animals	92
3.10.2	Plants	93
3.10.3	Bacteria	93
3.11	Care and Use of the pH Meter	93
3.12	Titration Curves	94
3.12.1	Practical Limits of Titration Curves	94
3.12.2	Solvent Correction	94
3.12.3	Determination of pK_a Values Can Be Obtained from Titration Data by Three Methods	95
3.13	Determination of pH Using Indicators	95
3.13.1	Materials	95
3.13.2	Procedure	95
3.14	Titration of a Mixture of a Strong and a Weak Acid	96
3.14.1	Principle	96
3.14.2	Materials	96
3.14.3	Procedure	96
3.15	Titration of a Strong Acid with a Strong Base	96
3.15.1	Materials	96
3.15.2	Procedure	97
3.16	Titration of a Weak Acid with a Strong Base	97
3.16.1	Materials	97
3.16.2	Procedure	97
3.17	Determination of pK_a	97
3.17.1	Materials	97
3.17.2	Procedure	98
3.18	pK_a Values of a Dicarboxylic Acid	98
3.18.1	Materials	98
3.18.2	Procedure	98

3.19	Acetate Buffers	98
3.19.1	Materials	98
3.19.2	Procedure	98
3.20	Titration Curves of Amino Acids	99
3.20.1	Principle	99
3.20.2	Materials	99
3.20.3	Protocol	99
3.20.4	Results and Calculations	99
3.21	Determination of pH of the Given Water/Soil Sample	100
3.21.1	Principle	100
3.21.2	Materials	101
3.21.3	Protocol	101
3.21.4	Precautions	102
3.22	Determination of pH of Fruit Juice	102
3.22.1	Principle	102
3.22.2	Protocol	102
3.23	Measurement of pH of Soil Sample	103
3.23.1	Principle	103
3.23.2	Materials	103
3.23.3	Protocol	103
3.A	Appendix A Indicators of Hydrogen Ion Concentration	104
3.B	Appendix B Buffer Solutions	104
3.B.1	Introduction	104
3.B.2	Tris Buffers	105
3.B.3	Ideal Buffers	106
3.B.4	Preparation of Imidazole, MOPS, and HEPES Buffers	106
3.B.5	Preparation of Phosphate Buffers (Gomori Buffers)	108
3.B.6	Acids and Bases	109
3.B.7	Buffers and Stock Solutions	109
3.B.7.1	Phosphate-Buffered Saline	109
3.B.7.2	10× Tris EDTA (TE)	110
3.B.7.3	Tris-HCl (1 M)	110
3.B.7.4	Tris Magnesium Buffer (TM)	111
3.B.7.5	Tris-Buffered Saline (TBS)	111
	Suggested Readings	111
	Important Links	112
4.	Spectrophotometer	113
4.1	Introduction	113
4.2	Beer-Lambert Law	114
4.2.1	Molar Extinction Coefficient	118
4.2.2	Specific Extinction Coefficient	118
4.3	Limitations of the Beer-Lambert Law	118
4.4	Measurement of Extinction	119

4.5	Colorimeter	119
4.5.1	Filters	120
4.5.2	Output	120
4.5.3	Directions for Use of the Spectronic 20 Spectrocolorimeter	120
4.5.3.1	Description of the Optical System	120
4.5.3.2	Description of the Electrical System	122
4.5.4	Choice of Instruments for Colorimetry	122
4.5.4.1	Absorbance Curves of Two Dyes	123
4.5.4.2	Demonstration of Beer's Law	123
4.5.4.3	Colorimetric Estimation of Inorganic Phosphate	124
4.5.4.4	Validity of Beer's Law for the Colorimetric Estimation of Creatinine	124
4.6	Spectrophotometry	125
4.6.1	Applications	125
4.6.2	Direction for Operations	129
4.7	Infrared Spectroscopy	130
4.7.1	Introduction	130
4.7.2	Principle	131
4.7.3	Instrumental Components	131
4.7.4	Sources	132
4.7.4.1	Globar Source	133
4.7.4.2	Incandescent Wire Source	133
4.7.5	Detectors	133
4.7.6	Sample Preparation	133
4.7.7	Applications	134
4.7.7.1	Absorption Spectrum of <i>p</i> -Nitrophenol	135
4.7.7.2	Absorption Spectra of Coenzyme Cytochrome c	135
4.7.7.3	Determination of the pK_a Value of <i>p</i> -Nitrophenol	136
4.7.7.4	Estimation of Barbiturates with the UV-Vis Spectrophotometer	137
4.7.7.5	Estimation of Hemoglobin Spectra	139
4.7.7.6	Ultraviolet Absorption of Proteins and Amino Acids	140
4.8	Fluorescence Spectroscopy	141
4.8.1	Fluorescence	141
4.8.2	Quenching	141
4.8.3	Applications	142
4.8.4	Intensity of Fluorescence and Concentration	142
4.8.5	Description of the Instrument	143
4.8.5.1	Light Source	143
4.8.5.2	Filters	143
4.8.5.3	Photomultiplier	143
4.9	Sensitivity of Fluorescence Assays	144
4.9.1	Principle	144
4.9.2	Materials	144
4.9.3	Protocol	144
4.10	Fluorescence Quenching	145
4.10.1	Materials	145
4.10.2	Protocol	145
4.11	Measurement of α -Naphthyl Phosphatase Activity	145
4.11.1	Principle	145

4.11.2	Materials	145
4.11.3	Protocol	145
4.11.4	Calculations	147
	Suggested Readings	148
	Important Links	148
5.	Centrifugation	149
5.1	Introduction	149
5.2	Centrifuges	150
5.3	Ultracentrifugation	150
5.3.1	Preparative Centrifugation	150
5.3.2	Analytical Centrifugation	150
5.3.3	Differential Centrifugation	150
5.3.4	Density Gradient Centrifugation	153
5.3.5	Isopycnic Centrifugation	153
5.4	Suspending Medium	155
5.5	Rotors	155
5.6	Fractionation of Rat Liver	156
5.6.1	Principle	156
5.6.2	Materials	156
5.6.3	Protocol	157
5.7	Estimation of DNA, RNA, and Protein in the Isolated Cell Fractions	158
5.7.1	Principle	158
5.7.2	Materials	158
5.7.3	Protocol	159
5.8	Enzyme Distribution in the Cell	159
5.8.1	Principle	159
5.8.2	Protocol	160
5.8.3	Results and Calculations	160
5.9	Glucose-6-Phosphatase	160
5.9.1	Principle	160
5.9.2	Materials	161
5.9.3	Protocol	162
5.9.4	Results and Calculations	162
5.10	Glutamate Dehydrogenase	162
5.10.1	Principle	162
5.10.2	Materials	162
5.10.3	Protocol	163
5.10.4	Result and Calculations	163
5.11	Acid Phosphatase	163
5.11.1	Principle	163
5.11.2	Materials	163
5.11.3	Protocol	164
5.11.4	Results and Calculation	164
5.12	Mitochondrial Swelling	164
5.12.1	Principle	164

5.12.2	Materials	164
5.12.3	Protocol	165
5.13	Determination of Lysosomal Integrity	165
5.13.1	Principle	165
5.13.2	Materials	166
5.13.3	Protocol	167
5.13.4	Calculations	167
5.14	Effect of Detergents on the Stability of the Lysosomal Membrane	167
5.14.1	Principle	167
5.14.2	Materials	168
5.14.3	Method	168
5.14.4	Calculations and Result	168
5.15	Density Gradient Centrifugation	169
5.15.1	Principle	169
5.15.2	Materials	170
5.15.3	Protocol	171
5.15.4	Result	171
5.16	Fractionation of Pig Brain by Density Gradient Centrifugation	171
5.16.1	Principle	171
5.16.2	Materials	172
5.16.3	Protocol	172
5.16.4	Precautions	173
5.17	Distribution of Enzymes in the Fractions Obtained from Pig Brain	174
5.17.1	Principle	174
5.17.2	Materials	174
5.17.3	Protocol	175
5.17.4	Results and Conclusions	175
5.18	Isolation of Chloroplasts	175
5.18.1	Protocol	175
5.18.2	Materials	176
5.18.3	Method	176
5.18.4	Result	178
5.19	Isolation of Chloroplast DNA	178
5.19.1	Principle	178
5.19.2	Precautions	178
5.19.3	Materials	178
5.19.4	Protocol	179
5.19.5	Result	179
5.20	Isolation of Mitochondria and Assay of a Marker Enzyme	179
5.20.1	Principle	179
5.20.2	Materials	180
5.20.3	Isolation of Mitochondria	180
5.20.3.1	Protocol I	180
5.20.3.2	Protocol II	181
5.20.3.3	Protocol III (by Clinical Centrifuge)	182
5.21	Isolation of Genomic DNA	184
5.21.1	Principle	184
5.21.2	Precautions	184

5.21.3	Materials	184
5.21.4	Method	184
5.21.5	DNA Digestion	185
5.22	Isolation of Chloroplasts from Spinach Leaves by Differential Centrifugation	186
5.22.1	Materials	186
5.22.2	Protocol	186
5.23	Isolation of Plasmid DNA by Centrifugation	186
5.23.1	Principle	186
5.23.2	Materials	187
5.23.3	Protocol	187
	Suggested Readings	188
	Important Links	189
6.	Radiation Biology	191
6.1	Introduction	191
6.2	Radioisotopes	192
6.2.1	Atomic Structure	192
6.2.1.1	Radioisotopes Are Used to Trace Molecules in Cells and Organisms	193
6.2.2	Units of Radioactivity	195
6.2.3	Measurement of Radioactivity	196
6.2.4	Proportional Counters	196
6.2.4.1	Scintillation Counters	197
6.2.4.2	Types of Scintillation Counting	198
6.2.4.3	Mechanism of the Liquid Scintillation Detection	199
6.2.5	Counting of Dual-Labeled Samples	201
6.2.5.1	Determination of Counting Efficiency	202
6.3	Sample Preparation	204
6.4	Autoradiography	205
6.4.1	Film Emulsion	205
6.4.2	Determination of Exposure Time	206
6.4.3	Tissue Preparation and Artifacts	206
6.4.4	Specific Autoradiographic Techniques	207
6.5	Distribution of $^{14}\text{CO}_2$ in Different Plant Parts	207
6.5.1	Principle	207
6.5.2	Precautions	208
6.5.3	Disposal of Radioactive Waste	208
6.5.4	Where to Buy the Isotopes	208
6.5.5	Materials	209
6.5.6	Protocol	209
6.5.6.1	Feeding of Plants with $^{14}\text{CO}_2$	209
6.5.6.2	Extraction and Measurement of Radioactivity	210
6.5.7	Calculations	211
6.5.8	Result	211
6.6	Photosynthetic Reduction of $^{14}\text{CO}_2$ to Primary Metabolic Product	212
6.6.1	Principle	212
6.6.2	Precautions	212
6.6.3	Materials	212

6.6.4	Protocol	212
6.6.5	Conclusions	214
6.6.6	Result	214
6.6.7	Autoradiography	214
6.7	Incorporation of Labeled Acetate into Leucoplastic Fatty Acids of Developing Brassica Seeds	214
6.7.1	Principle	214
6.7.2	Precautions	215
6.7.3	Materials	215
6.7.4	Protocol	215
6.7.5	Result	216
	Suggested Readings	216
	Important Links	216
7.	Chromatography	217
7.1	Chromatography	217
7.2	Paper Chromatography	217
7.2.1	Introduction	217
7.2.2	Sample Preparation	218
7.2.3	Paper	219
7.2.4	Solvent	219
7.2.5	Component Detection	219
7.2.6	Identification	220
7.3	Ascending Chromatography	220
7.4	Descending Chromatography	220
7.4.1	Multiple Developments	221
7.4.2	Continuous Development	221
7.4.3	2D (Bidimensional) Chromatography	221
7.4.4	Reversed-Phase Chromatography	221
7.4.4.1	Partition Chromatography	222
7.5	Separation and Identification of Amino Acids by Descending Paper Chromatography	223
7.5.1	Principle	223
7.5.2	Materials	224
7.5.3	Protocol	224
7.5.4	Observations	225
7.5.5	Conclusion	226
7.6	Separation and Identification of Amino Acids by Ascending Paper Chromatography	226
7.6.1	Materials	226
7.6.2	Protocol	226
7.6.3	Observations	227
7.7	Separation and Identification of Amino Acids in a Given Mixture by 2D Paper Chromatography	227
7.7.1	Principle	227
7.7.2	Materials	227
7.7.3	Procedure	228
7.7.4	Observations	229

7.8	Thin Layer Chromatography	229
7.8.1	Introduction	229
7.8.2	Principle	229
7.8.3	Production of Thin Layer	230
7.8.4	Development	230
7.8.5	Location	230
7.9	Thin-Layer Gel Chromatography	231
7.10	Separation and Identification of Sugars by Adsorption Thin Layer Chromatography	232
7.10.1	Principle	232
7.10.2	Materials	232
7.10.3	Protocol	232
7.10.4	Observations	233
7.11	Identification of Lipids in a Given Sample by Thin Layer Chromatography	233
7.11.1	Principle	233
7.11.2	Materials	234
7.11.3	Protocol	234
7.11.4	Observation and Calculations	234
7.12	Identification of Sugars in Fruit Juices Using Thin Layer Chromatography	235
7.12.1	Materials	235
7.12.2	Protocol	235
7.13	Column Chromatography	235
7.14	Gradient Preparation	237
7.15	Adsorption Chromatography	238
7.16	Separation of Pigments from Leaves or Flowers by Adsorption Column Chromatography	240
7.16.1	Principle	240
7.16.2	Materials	240
7.16.3	Protocol	240
	7.16.3.1 Sample Preparation	240
	7.16.3.2 Column Preparation	241
	7.16.3.3 Sample Application	241
	7.16.3.4 Column Development	241
	7.16.3.5 Result	241
7.17	Ion-Exchange Chromatography	241
7.17.1	Introduction	241
7.17.2	Theory	242
	7.17.2.1 Matrix	242
	7.17.2.2 Ionizable Groups	242
	7.17.2.3 Ion-Exchange Equilibria	243
	7.17.2.4 Elution of Bound Ions	243
	7.17.2.5 Preparation of Material	244
7.18	Separation of Amino Acids by Ion-Exchange Chromatography	245
7.18.1	Materials	245
7.18.2	Protocol	246
	7.18.2.1 Preparation of the Column	246
	7.18.2.2 Elution of Amino Acid	246
	7.18.2.3 Detection of Amino Acids	246

7.19	Separation of Proteins from Human Serum by Ion-Exchange Chromatography	247
7.19.1	Principle	247
7.19.2	Materials	248
7.19.3	Protocol	248
	7.19.3.1 Recovery of Protein	248
	7.19.3.2 Characterization of Protein	248
7.20	Gel Filtration/Size-Exclusion Column Chromatography	248
7.20.1	Molecular Weight Determination	251
7.21	Separation of Blue Dextran and Cobalt Chloride on Sephadex G-25	253
7.21.1	Principle	253
7.21.2	Materials	253
7.21.3	Protocol	253
7.22	Desalting of Protein Sample by Gel Filtration	253
7.22.1	Introduction	253
7.22.2	Materials	254
7.22.3	Protocol	254
	7.22.3.1 Column Preparation	254
	7.22.3.2 Running of Column	254
	7.22.3.3 Column Separation	254
7.23	Determination of Molecular Weight of a Given Protein by Gel Filtration	255
7.23.1	Principle	255
7.23.2	Materials	255
7.23.3	Protocol	255
7.23.4	Molecular Weight Determination	256
