Introduction		1
PART I MODELS OF HOUSEHOLD BEHAVIOR		
1 Facts		11
1.1 Marriage, Divorce, and Remarriage		11
1.1.1 Marital Status		11
1.1.2 Marital Histories		14
1.1.3 Flows		17
1.1.4 Transitions		20
1.1.5 Households		23
1.2 Marriage, Work, and Wages		26
1.2.1 Time Use		26
1.2.2 Wages		33
1.2.3 The Marriage Premium		35
1.3 Who Marries Whom?		36
1.4 Children		44
1.4.1 Fertility		44
1.4.2 Children under Different Household Arrangements		50
1.5 Saving and Life Stages		50
1.6 References		55
2 The Gains from Marriage		58
2.1 Public Goods		59
2.2 Specialization and Increasing Returns to Scale		67

2.3	Imperfect Credit Markets	69
2.4	Risk-Sharing	71
2.5	Children	72
2.5.1	Technology and Preferences	72
2.5.2	Intact Families	73
2.5.3	Divorce with No Transfers	74
2.6	Concluding Remarks	76
2.7	References	77
3	Preferences and Decision Making	80
3.1	Preferences	80
3.2	Household Production	84
3.2.1	The General Framework	84
3.2.2	Children	88
3.3	The Unitary Model	89
3.4	Noncooperative Models	90
3.4.1	No Public Goods	90
3.4.2	One Public Good	92
3.4.3	Altruism and the Rotten Kid Theorem	95
3.4.4	Many Public Goods	97
3.5	Cooperative Models: The Collective Approach	99
3.5.1	Decision Processes	100
3.5.2	Assuming Efficiency	102
3.5.3	Distribution Factors	104
3.5.4	Modeling Efficiency	105
3.5.5	Pareto Weights and Power	111
3.5.6	Household Utility	112
3.5.7	Caring	114
3.5.8	Children	115
3.5.9	The Unitary Model as a Special Case	116
3.5.10	The Rotten Kid Theorem Revisited	119
3.5.11	Bargaining Models	122
3.5.12	Other Approaches	127
3.6	References	130
4	The Collective Model: A Formal Analysis	133
4.1	Collective Demand Functions: A General Characterization	133
4.1.1	The Collective Household Utility Function	133
4.1.2	Structural and Observable Demand	133
4.1.3	The Slutsky Matrix for Collective Demands	136

4.1.4	Distribution Factors	137
4.1.5	Larger Households	139
4.1.6	Children	140
4.2	Duality in the Collective Model	141
4.2.1	The Collective Expenditure Function	141
4.2.2	Indirect Utilities	143
4.2.3	Welfare	144
4.3	The Case of Purely Private Consumptions	147
4.3.1	The Sharing Rule	147
4.3.2	Caring Preferences	149
4.3.3	Indirect Utilities	150
4.4	Application: Labor Supply with Private Consumption	151
4.4.1	The General Setting	151
4.4.2	Egoistic Preferences and Private Consumption	153
4.4.3	Collective Labor Supply	154
4.5	Public Goods	156
4.5.1	Lindahl Prices	156
4.5.2	The Conditional Sharing Rule	158
4.5.3	Application: Labor Supply, Female Empowerment, and Expenditures on Public Good	160
4.6	Household Production in the Collective Model	163
4.6.1	The Basic Model	164
4.6.2	Domestic Production and Time Use	165
4.6.3	Empirical Issues	173
4.7	References	174
5	Empirical Issues for the Collective Model	176
5.1	What Are the Objects of Interest?	176
5.2	Data without Price Variation	179
5.2.1	Necessary and Sufficient Conditions for a Collective Model	179
5.2.2	Identifiability	182
5.2.3	Private Consumption	184
5.2.4	Assignability	185
5.3	Observing Price Responses	187
5.3.1	Testing the Collective Model	187
5.3.2	Identifying the Collective Model	189
5.3.3	A Simple Example	192
5.3.4	The Revealed-Preference Approach	196
5.4	The Case of Labor Supply	197

5.4.1	Egoistic Preferences and Private Consumption	197
5.4.2	Extensions	200
5.5	Empirical Evidence	202
5.5.1	Evidence against the Unitary Model	202
5.5.2	Evidence on the Collective Model	207
5.5.3	Estimating the Collective Model	210
5.5.4	Concluding Remarks	217
5.6	References	218
6	Uncertainty and Dynamics in the Collective Model	223
6.1	Is Commitment Possible?	224
6.2	Modeling Commitment	231
6.2.1	Full Commitment	231
6.2.2	Constraints on Commitment	232
6.2.3	Endogenous Pareto Weights	233
6.3	Efficient Risk-Sharing in a Static Context	235
6.3.1	The Collective Model under Uncertainty	235
6.3.2	Efficient Risk-Sharing in a One-Commodity World	239
6.3.3	Efficient Risk-Sharing in a Multicommodity Context: An Introduction	243
6.3.4	Econometric Issues	244
6.4	Intertemporal Behavior	248
6.4.1	The Unitary Approach: Euler Equations at the Household Level	248
6.4.2	Collective Euler Equations under <i>Ex Ante</i> Efficiency	250
6.4.3	The <i>Ex Ante</i> Inefficiency Case	252
6.4.4	Conclusion	254
6.5	Divorce	255
6.5.1	The Basic Model	255
6.5.2	Divorce under Transferable Utility and the Becker-Coase Theorem	259
6.5.3	Divorce and Investment in Children: A Non-transferable Utility Example	264
6.6	References	271

PART II EQUILIBRIUM MODELS OF THE MARRIAGE MARKET

7	Matching on the Marriage Market: Theory	277
7.1	Stable Matching without Transfers: The Gale-Shapley Algorithm	278

7.2	Stable Matching with Transferable Utilities: The Becker-Shapley-Shubik Model	282
7.2.1	The Basic Framework	282
7.2.2	Assortative Mating	289
7.2.3	Matching with a Continuum of Agents	294
7.2.4	Multidimensional Matching	296
7.3	Matching with General Utilities	298
7.4	Search	301
7.4.1	The Basic Framework	301
7.4.2	Search and Assortative Mating	307
7.5	Bargaining in Marriage (BIM)	311
7.6	References	314
8	Sharing the Gains from Marriage	316
8.1	Determination of Shares with a Finite Number of Agents	317
8.1.1	The Two-Men-Two-Women Case	317
8.1.2	Bounds on Levels	321
8.1.3	Bounds on Differences	322
8.2	The Continuous Case	325
8.2.1	Basic Results	325
8.2.2	A Tractable Specification	328
8.2.3	Comparative Statics	332
8.2.4	Taxation	337
8.2.5	An Example	340
8.2.6	Matching on Preferences: <i>Roe v. Wade</i> and Female Empowerment	346
8.3	Matching with General Utilities	354
8.3.1	Recovering Individual Utilities: The General Strategy	355
8.3.2	A Specific Example	356
8.4	Matching by Categories	363
8.5	Appendix: Extreme-Value Distributions	368
8.6	References	369
9	Investment in Schooling and the Marriage Market	371
9.1	The Basic Model	372
9.1.1	Definitions	373
9.1.2	Assumptions	373
9.1.3	The Marriage Market	375

9.1.4	Investment Decisions	377
9.1.5	Equilibrium	379
9.2	Are Premarital Investments Efficient?	384
9.3	Gender Differences in the Incentive to Invest	388
9.3.1	The Household	389
9.3.2	The Impact of the Wage Gap	392
9.3.3	The Impact of Household Roles	394
9.3.4	Division of Labor and Career Choice	397
9.3.5	Why Women May Acquire More Schooling than Men	398
9.4	A Numerical Example	400
9.4.1	Summary and Conclusions	406
9.5	Appendix: Existence and Uniqueness of Equilibrium	407
9.6	References	412
10	An Equilibrium Model of Marriage, Fertility, and Divorce	414
10.1	A Simple Model of the Marriage Market	414
10.1.1	Individual Choices	416
10.1.2	Aggregation	420
10.1.3	Equilibrium	421
10.2	An Example	422
10.3	Income Uncertainty and Ex Post Heterogeneity	427
10.4	Conclusion	430
10.5	Appendix	431
10.5.1	Properties of the Expected Utility, with and without Children	431
10.5.2	Properties of the Trigger for Having Children θ_c	432
10.5.3	Properties of the Trigger for Marriage θ_m	432
10.5.4	Calculations for the Example	434
10.5.5	Low Costs of Raising Children	436
10.6	References	436
11	Children and Family Structure	438
11.1	Introduction	438
11.2	The Model	442
11.2.1	Incomes	443
11.2.2	Preferences	443
11.2.3	Matching	444
11.2.4	Timing	445
11.2.5	Legal Framework	445

11.3	The Allocation of Household Resources	447
11.3.1	Intact Family	447
11.3.2	Mother Remains Single	447
11.3.3	Mother Remarries	448
11.4	Equilibrium: Characterization	450
11.4.1	Legal Payment	450
11.4.2	Optimal Interim Contracts	451
11.4.3	Partial Equilibrium	454
11.5	Divorce	456
11.6	Full Equilibrium	459
11.6.1	Summary	461
11.7	Welfare	462
11.7.1	Summary	464
11.8	Conclusion	465
11.9	References	467
