

CONTENTS

	<i>Page</i>
I. DEFINITIONS AND DEVELOPMENT	1
Definitions; early measurements; the van't Hoff equation	
II. THE THERMODYNAMICS OF OSMOSIS	8
Free energy and chemical potential; ideal and non-ideal solutions; the osmotic pressures of ideal and non-ideal solutions; thermodynamics and the van't Hoff equation; the osmotic coefficient; osmolarity; the osmotic pressure and other colligative properties; determination of molecular weights	
III. OSMOSIS AND LEAKY MEMBRANES	19
Leaky membranes and steady states; the thermodynamics of the steady state; steady-state thermodynamics and leaky membranes; the reflection coefficient; practical coefficients; the frictional model; leaky membranes and electrolytes	
IV. THE OSMOTIC PRESSURES OF VARIOUS SOLUTIONS ..	29
Causes of non-ideality; aqueous solutions of non-electrolytes and simple electrolytes; polymer solutions; polyelectrolyte solutions; polyelectrolytes and the Donnan equilibrium; osmotic measurements of the molecular weights of polyelectrolytes; the swelling of polyelectrolyte gels; solutions of colloidal electrolytes	
V. THE MEASUREMENT OF OSMOTIC PRESSURES.. ..	42
Methods; osmometers; membranes; sources of error	
VI. THE MECHANISM OF OSMOSIS	48
The cause of semipermeability; the mechanism of osmosis	

VII.	OSMOTIC PHENOMENA IN ANIMALS	52
	Osmosis and animal cells; osmotic phenomena in erythrocytes and <i>Arbacia</i> eggs; animal cells and the Donnan effect; the variation of cell volume with osmotic pressure; osmoregulation in animals; the mammalian kidney; osmosis and the lymphatic system	
VIII.	OSMOTIC PHENOMENA IN PLANTS	62
	Osmosis and plant cells; plasmolysis; the measurement of the water potentials, osmotic pressures, and turgor pressures of plant cells; the water relations of plants; stomatal opening and closure; diurnal variation of osmotic pressure
