Contents

Foreword: A selective overview vii

Chapter 1. Parameters 1
1.1. The automorphic Langlands group 1
1.2. Self-dual, finite-dimensional representations 6
1.3. Representations of $GL(N)$ 15
1.4. A substitute for global parameters 26
1.5. Statement of three main theorems 40

Chapter 2. Local Transfer 51
2.1. Langlands-Shelstad-Kottwitz transfer 51
2.2. Characterization of the local classification 62
2.3. Normalized intertwining operators 79
2.4. Statement of the local intertwining relation 96
2.5. Relations with Whittaker models 109

Chapter 3. Global Stabilization 121
3.1. The discrete part of the trace formula 121
3.2. Stabilization 130
3.3. Contribution of a parameter ψ 138
3.4. A preliminary comparison 145
3.5. On the vanishing of coefficients 153

Chapter 4. The Standard Model 167
4.1. Statement of the stable multiplicity formula 167
4.2. On the global intertwining relation 173
4.3. Spectral terms 186
4.4. Endoscopic terms 193
4.5. The comparison 201
4.6. The two sign lemmas 214
4.7. On the global theorems 229
4.8. Remarks on general groups 240

Chapter 5. A Study of Critical Cases 253
5.1. The case of square integrable ψ 253
5.2. The case of elliptic ψ 264
5.3. A supplementary parameter ψ_+ 272
5.4. Generic parameters with local constraints 286

Chapter 6. The Local Classification 301
6.1. Local parameters 301
6.2. Construction of global representations $\dot{\pi}$ 309
6.3. Construction of global parameters $\dot{\phi}$ 321
6.4. The local intertwining relation for ϕ 332
6.5. Orthogonality relations for ϕ 346
6.6. Local packets for composite ϕ 356
6.7. Local packets for simple ϕ 367
6.8. Resolution 377

Chapter 7. Local Nontempered Representations 387
7.1. Local parameters and duality 387
7.2. Construction of global parameters $\dot{\psi}$ 396
7.3. The local intertwining relation for ψ 404
7.4. Local packets for composite and simple ψ 415
7.5. Some remarks on characters 429

Chapter 8. The Global Classification 443
8.1. On the final step 443
8.2. Proof by contradiction 453
8.3. Reflections on the results 469
8.4. Refinements of generic parameters for $SO(2n)$ 485
8.5. An approximation of the "regular part" of L_F 503

Chapter 9. Inner Forms 513
9.1. Inner twists and automorphisms 513
9.2. Parameters and centralizers 526
9.3. On the normalization of transfer factors 536
9.4. Statement of the local classification 548
9.5. Statement of a global classification 560
