Contents

Contents vii

1 Introduction 1
1.1 Context . . . 1
1.2 Main Focus and Structure . . . 4

2 Notation and Fundamentals 11
2.1 Terminology . . . 12
2.2 Fundamentals and General Approaches . . . 16
2.2.1 Stochastics . . . 16
2.2.2 Interpolation . . . 18
2.2.3 Mapping . . . 18
2.3 Sheet Metal Forming Processes with Example . . . 22

3 Mathematical Concepts 29
3.1 Design of Experiments . . . 30
3.2 Sensitivity Analysis . . . 33
3.2.1 Local Methods . . . 34
3.2.2 Global Methods . . . 36
3.3 Dimension Reduction Methods . . . 38
3.3.1 Clustering . . . 39
3.3.2 Principal Component Analysis Using Singular Value Decomposition . . . 40
3.3.3 Nonlinear Dimension Reduction Methods . . . 43
3.4 Metamodels . . . 46
3.5 Stochastic Finite Element Methods . . . 49
3.5.1 Stochastic Galerkin Approach . . . 50
3.5.2 Stochastic Collocation Method . . . 51

4 Parameter Classification Using Sensitivity Analysis 53
4.1 Importance and Nonlinearity Classes . . . 54

Bibliografische Informationen
http://d-nb.info/1051395127

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.1.1 Linear Importance Classes 56
4.1.2 Nonlinearity Classes 59
4.1.3 Total Importance Classes 63
4.1.4 Application of the Parameter Classification 64
4.2 Clustering Using the Nonlinearity Measure 70
4.3 Efficiency 73
4.4 Conclusions 75

5 Processing of the Database **79**
5.1 Parameter Space Dimension Reduction 80
5.2 Iterative Extension of the Database 83
5.3 Ensemble Compression of the Database 85

6 Forecast Model and Propagation of Variations **95**
6.1 Approximation of New Designs 96
6.1.1 Radial Basis Function Metamodel Accelerated by a Singular Value Decomposition 97
6.1.2 Dealing with Deleted Mesh Elements 99
6.2 Computation of Statistics 102
6.3 Propagation of All Relevant Scatter Information to the Next Processing Step 105
6.4 Quality Control 107
6.5 Efficiency 115
6.6 Conclusions 116

7 Benchmarks and Industrial Applications **119**
7.1 Numerical Comparison Between the New Methodology and a Stochastic Collocation Method 120
7.1.1 Overview of the Model Problem 121
7.1.2 Results of the Parameter Classification 122
7.1.3 Comparison Between the Results of a Collocation Method and the Accelerated Metamodel Approach 124
7.2 Forming of a Pan with Secondary Design Elements 128
7.2.1 Forecast Models 128
7.2.2 Computation of Statistics 139
7.2.3 Conclusions 142
7.3 Process Chain Forming-to-Crash 143
7.3.1 ZStE340 Metal Blank of a B-Pillar 143
7.3.2 Parameter Classification of the Forming Step 148
7.3.3 Forecast Models 153
7.3.4 Parameter Classification of the Crash Processing Step 167
7.3.5 Forecast Model Taking the Forming History Into Account 174

7.3.6 Conclusions 180

8 Conclusions and Future Directions **187**

Bibliography **193**

List of Figures **203**

List of Tables **210**

Acronyms **213**

List of Symbols **215**
