

TABLE OF CONTENTS

SUMMARY AND CONCLUSIONS.....	9
i. Making taxation and environmental policies mutually reinforcing.....	9
ii. Implementing environmentally related taxes.....	10
iii. Further work.....	12
Notes.....	14
INTRODUCTION.....	15
Environmentally related taxes.....	15
Outline of the report.....	16
Notes.....	17

Part I

CONCEPTUAL BACKGROUND

<i>Chapter 1. A BRIEF THEORY OF ENVIRONMENTALLY RELATED TAXATION</i>	21
1.1. Externalities.....	21
1.2. Economic instruments.....	22
1.3. Static efficiency.....	22
1.4. Dynamic efficiency.....	23
1.5. Tax design issues.....	24
1.6. Options for the use of tax revenues.....	25
1.7. The main obstacles to implementing environmentally related taxation.....	27
1.8. Environmentally related taxation in policy mixes.....	30
Notes.....	31
<i>Chapter 2. OPTIONS FOR GREEN TAX REFORM</i>	33
2.1. The background to green tax reform.....	33
2.2. Targets of green tax reform.....	33
2.3. Double dividend possibilities.....	35
2.4. Policy packages.....	40
2.5. Evaluating environmentally related taxation.....	45
Notes.....	48

Part II

IMPLEMENTING GREEN TAX REFORM

<i>Chapter 3. AN OVERVIEW OF GREEN TAX REFORM AND ENVIRONMENTALLY RELATED TAXES IN OECD COUNTRIES</i>	51
3.1. Revenues from environmentally related taxes.....	53
3.2. Energy and fuel taxes.....	55
3.3. Other environmentally related taxes.....	61
Notes.....	70

Chapter 4. ADDRESSING COMPETITIVENESS CONCERNS OVER ENVIRONMENTALLY RELATED TAXATION	71
4.1. Introduction	71
4.2. Possible economic implications – the case of a carbon tax	72
4.3. Evidence of competitiveness impacts and current mitigation practices	77
4.4. The impact and costs of mitigation measures	79
4.5. Possible responses to the competitiveness issue – a case for tax co-ordination?	81
4.6. Conclusions	82
Notes	85
Chapter 5. THE INCOME DISTRIBUTION ISSUE	87
5.1. Available evidence on income distribution impacts	87
5.2. Policy options	88
Notes	89
Chapter 6. ADMINISTRATIVE AND COMPLIANCE COSTS	91
6.1. Factors affecting administrative costs	91
6.2. Evidence on administrative costs	91
6.3. Policy options	92
Notes	93
Chapter 7. ACCEPTANCE BUILDING	95
7.1. Green Tax Commissions	95
7.2. Other measures for acceptance building	96
Notes	98
Chapter 8. ENVIRONMENTAL EFFECTIVENESS: AVAILABLE EVIDENCE	99
8.1. Price elasticities: behavioural responses	99
8.2. Empirical evidence for environmental effectiveness of taxes	103
8.3. Empirical evidence for the environmental effectiveness of tax differentials	110
8.4. Improving the environmental effectiveness of taxes	111
Notes	113
Chapter 9. TAXING GREENHOUSE GASES: ISSUES AND OPTIONS	115
9.1. Taxation and the Kyoto Protocol	115
9.2. The Kyoto Protocol and the flexible mechanisms	115
9.3. Potential for CO ₂ taxation in OECD	116
9.4. The importance of the non-CO ₂ greenhouse gases	117
9.5. Taxing non-CO ₂ greenhouse gases	118
9.6. OECD Member country experience with taxing non-CO ₂ greenhouse gases	121
Notes	122
Chapter 10. GREEN TAX REFORMS: AN ASSESSMENT	123
10.1. Environmental effectiveness	124
10.2. Cost-effectiveness of environmentally related taxation	126
Annexes	
I. Basic Economic Analysis of “First-round” Effects of Introducing a Carbon Tax	129
II. The Case of Co-ordinated Implementation of a Carbon Tax	132
III. ODC Taxation in the US	133
IV. Non-CO ₂ Greenhouse Gas Taxation	134
Bibliography	137

List of Boxes

1. Taxes and tax-bases	24
2. The concept of competitiveness	28
3. Effects of energy support removal	35
4. Efficiency costs tied to taxation	36
5. Main conclusions from existing studies on the double dividend	38
6. The pitfalls of voluntary approaches	41
7. Ozone depleting chemical taxation and quota trading in the US	43
8. Carbon taxes and trading proposals in Norway	44
9. German ecological tax reform	52
10. Competitiveness based and income distribution based exemptions and rebates in energy taxes	62
11. Environmentally motivated exemptions and rebates in energy and fuel taxes	64
12. Rebates and exemptions in taxes concerning final treatment of waste	68
13. Taxes on chemicals and on resource extraction	69
14. Acceptance building measures used for the UK tax on industry and business use of energy	97
15. The main elasticity terms	100
16. Kyoto Protocol flexible mechanisms	116

List of Tables

1. Support levels in OECD countries	34
2. Double dividend packages	40
3. Selected OECD countries cost increases from a tax of US\$100/ton carbon	76
4. Changes in tax revenue by sector in Finland in 2010	77
5. Green Tax Commissions and their remit	96
6. Selected estimates of price elasticity of gasoline	101
7. Selected estimates of own-price elasticity of residential electricity	101
8. Elasticity for modes of transport	102
9. The German ecological tax reform – differences in the additional tax burden between fuels	106
10. Greenhouse gas sources that are suitable for taxation	119
11. Greenhouse gas sources that are not suitable for taxation	120

Annexes

A.3.1. Ozone-depleting chemical taxation in the US	133
A.3.2. Tax on floor stocks of ODCs	133

List of Figures

1. The socially efficient level of taxation	21
2. The dynamic efficiency of taxes	23
3. Revenues from environmentally related taxes in per cent of GDP	53
4. Revenues from environmentally taxes in per cent of total tax revenues	54
5. Revenues from environmentally related taxes per capita	54
6. Revenues raised on environmentally related tax-bases	55
7. Tax rates on motor vehicle fuels and light fuel oil, as of 1.1.2000	57
8. Tax rates on electricity consumption, as of 1.1.2000	59
9. Tax rates on aviation fuels used in domestic flights, as of 1.1.2000	60
10. Tax rates on final waste treatment, as of 1.1.2000	65
11. Taxes on beverage containers	66
12. Tax rates on sulphur content in fuels, as of 1.1.2000	67
13. Petrol prices and fuel efficiency of new cars	104

Annexes

A.1.1. Illustrative impact of carbon tax on monopolist	129
A.1.2. Illustrative impact of carbon tax on perfectly competitive firm	130
A.2.1. Harmonised adoption of carbon tax: illustrative effects	132
