Acknowledgements	vii
Foreword	xi
Introduction	xiii
1. How to Explore Planets?	1
1.1 The Earth in space	1
1.2 Telescopic observations	3
1.3 Observations from space	7
1.4 Searching for exoplanets	15
2. The Birth of Planets	21
2.1 A formation within a disk	21
2.2 A common scenario in the Universe	22
2.3 What is the age of the solar system?	26
2.4 The main steps of planetary formation	29
2.5 Telluric planets and giant planets	31
2.6 Between the two families of planets: asteroids	33
2.7 Pluto and the transneptunian objects	35

3.	Exploring Planet Earth	37
3.1	Rocks and metals: a differentiated internal structure	39
3.2	A terrestrial singularity: plate tectonics	43
3.3	Formation of terrestrial relief: the isostasy principle	45
3.4	Our natural environment: the terrestrial atmosphere	46
3.5	The water cycle: another specificity of Earth	52
3.6	Between the Earth and space, the magnetosphere	54
3.7	A brief history of the Earth's climate	56
3.8	The Earth–Moon couple: a double system	60
3.9	The Earth, a unique planet...	62
4.	The Neighbors of the Earth	65
4.1	Closest to the Sun, Mercury	66
4.2	A Moon that looks like Mercury	69
4.3	Venus, the furnace	72
4.4	Mars, a desert world	79
4.5	Comparative evolution of terrestrial planets: the role of water	89
5.	A Little Further, the Giant Planets	93
5.1	Two classes of giant planets	95
5.2	From Jupiter to Neptune: four decades of exploration	112
5.3	The outer satellites	118
6.	Exoplanets, the New Worlds	129
6.1	A long quest marked with failures	130
6.2	Fifteen years later, the situation	144
6.3	The formation of planetary systems	157
6.4	How to classify exoplanets?	161
6.5	From detection to characterization	164
7.	Searching for Habitable Worlds	171
7.1	A new discipline, astrobiology	171
7.2	Life elsewhere in the solar system?	176
7.3	Life on exoplanets?	182
7.4	Searching for inhabited worlds	186
