

CONTENTS

CHAPTER 1:

Introduction	1
1 Background and Motivation	2
1.1 Transformation of the power generation system	2
1.2 Transformation to a more decentralized power generation system	5
1.3 Governmental support and promotion schemes	5
2 Contribution of the thesis and research question	6
3 Structure of the thesis	9
4 Model description and methodical limitations of the chosen approaches	11
4.1 Financial evaluation models	11
4.2 Mean-variance portfolio model	12
4.3 Real options models	14
4.4 Input parameter of the evaluation models	15
5 Summary of results and practical implications	18
6 Outlook and need for further research	20

CHAPTER 2:

Development of cogeneration in Germany: a mean-variance portfolio analysis of individual technology's prospects in view of the new regulatory framework	24
1 Introduction	26
2 Review of the relevant literature	28
2.1 CHP generation	28
2.2 Application of portfolio theory on generation portfolios	30
3 Classification of CHP applications	32
3.1 Classification by size	33
3.2 Classification by technology	33
3.3 Classification by mode of operation	34
3.4 Classification by fuel type	34
3.5 Classification by sector	34
4 Model assumptions	36

4.1 Commodity prices	36
4.2 Technical and operational parameters	38
4.3 CHP promotion	40
4.4 Allocation of CO ₂ allowances	40
5 Application of MVP theory to CHP technologies.....	41
5.1 Definition of selection criteria for portfolio investigation	42
5.1.1 Net present value	42
5.1.2 Expected annual return.....	43
5.2 Portfolio calculation	44
5.3 Results of the portfolio evaluation	45
5.3.1 Portfolio evaluation based on NPVs	45
5.3.2 Portfolio evaluation based on the expected annual return.....	47
6 Discussion and impact on CHP generation in Germany	50
7 Conclusion.....	53

CHAPTER 3:

The benefit of regional diversification of cogeneration investments in Europe: A mean-variance portfolio analysis

1 Introduction	65
2 Status of CHP implementation in Europe	66
3 Support mechanisms for CHP generation	66
3.1 Survey of support mechanisms for CHP	67
3.1.1 Feed-in tariffs	67
3.1.2 Certificate schemes	68
3.1.3 Investment support	68
3.1.4 Fiscal support	69
3.1.5 Beneficial allocation of CO ₂ emission permits	69
3.2 Examples of the application of CHP support mechanisms in Europe.....	70
3.2.1 CHP promotion in Germany	71
3.2.2 CHP promotion in France	72
3.2.3 CHP promotion in Italy	73
3.2.4 CHP promotion in the UK.....	74
4 Application of MVP theory in the context of power generation.....	75

5	Definition of input parameters	77
5.1	Commodity prices	77
5.2	Technical and operational parameters.....	78
5.3	Financial parameters of the cash flow model.....	79
6	MVP analysis on CHP investment options	80
6.1	Results from the financial model	80
6.2	Sensitivity analysis	80
6.3	Correlation coefficients	82
6.4	Results MVP analysis.....	83
6.4.1	CCGT-CHP	83
6.4.2	Engine-CHP	84
7	Conclusion and policy implications	86

CHAPTER 4:

Investment in new power generation under uncertainty: Benefits of CHP vs. condensing plants in a copula-based analysis..... 100

1	Introduction	102
2	Review of related literature	104
3	Model assumptions and definition of assessment criteria.....	107
3.1	Input parameters	108
3.1.1	Technical parameter of the power plants	108
3.1.2	Commodity price assumptions	110
3.1.3	Promotion of CHP in Germany.....	111
3.2	Calculation of the aggregated annual spread.....	112
3.2.1	Specific spread	112
3.2.2	Utilization of power plants.....	115
3.2.3	Calculation of the aggregated annual spread based on correlation coefficients....	116
3.2.4	Calculation of the aggregated annual spread based on copula functions.....	118
4	Structure of the real options model	123
5	Discussion and interpretation of the results	127
5.1	Difference between condensing plants and CHP plants.....	127
5.2	Influence of CHP generation on investment decisions in coal plants.....	128
6	Conclusions	130

CHAPTER 5:

The impact of modified EU ETS allocation principles on the economics of CHP-based district heating systems 141

1	Introduction	143
2	CHP-based district heating systems	144
2.1	Classification of district heating systems	144
2.2	Primary energy savings and emission reduction through CHP-based district heating.	145
2.2.1	Large-scale CHP technologies	146
2.2.2	Small-scale CHP technologies	148
3	The European emission trading system.....	150
3.1	General principles in the third EU ETS period	150
3.2	Modification of allocation rules for CHP-based DH plants in the third ETS period ...	152
4	Economic evaluation of modified EU ETS allocation rules for CHP-based DH.....	154
4.1	Input parameters	154
4.1.1	Technical and operational parameters	154
4.1.2	Commodity price assumptions	156
4.2	Results of the economic evaluation	157
5	Impact of modified allocation rules on investments in new CHP plants for DH.....	161
5.1	Real options approach	161
5.2	Model description.....	163
5.3	Discussion and interpretation of the results	167
5.3.1	Impact of the EU ETS on investments in large-scale CHP applications for DH ..	167
5.3.2	Impact of modified EU ETS principles on small-scale CHP units	168
6	Conclusion.....	169
