

## Contents

1. Objectives of monitoring range management in Kenya
2. Introduction to the monitoring sites
  - 2.1. Climate conditions of the monitoring sites
  - 2.2. Rainfall and range conditions
  - 2.3. Landuse and population
3. Methods of monitoring - a practical approach
  - 3.1. Selection of monitoring sites
  - 3.2. Material and equipment for monitoring work
    - 3.2.1. Maps and aerial photographs
    - 3.2.2. Instruments for monitoring work
    - 3.2.3. Ground reference data
      - 3.2.3.1. General information on the monitoring sites
      - 3.2.3.2. Relief and morphodynamics
      - 3.2.3.3. The water question
      - 3.2.3.4. The range vegetation
      - 3.2.3.5. Landuse and environment
    - 3.2.4. Time and costs of a range trend monitoring programme
4. Monitoring results and range condition changes
  - 4.1. Interfluvial plains with Indigofera-Heliotropium dwarf shrub
  - 4.2. Hillfoot plains with open Commiphora bush and Duosperma dwarf shrub

- 4.3. The sedimentary plains with *Indigofera* dwarf shrub and *Dactyloctenium* grassland
- 4.4. Stony hill slopes with open *Commiphora* thorn bush and *Indigofera* dwarf shrub
5. Discussion and perspectives
6. References

Appendix 1 Ground reference data sheet for field work

Appendix 2 Table of erosion forms

Appendix 3 List of monitoring sites

Appendix 4 Soil laboratory data

Appendix 5 Photos of monitoring sites
