

Contents

1	Some measures of autocorrelation in the plane	
1.1	Introduction	1
1.2	The spatial autocorrelation problem	2
1.3	Basic measures of spatial autocorrelation	3
1.3.1	Tests for nominal data	4
1.3.2	Tests for ordinal and interval data	7
1.3.3	Choice of test statistic	9
1.3.4	Limitations of measures	10
1.4	The weighted coefficients	11
1.4.1	The form of the coefficients	11
1.4.2	Structure of the weights	12
1.4.3	Tests of significance	13
1.5	Examples	16
1.5.1	Join counts	16
1.5.2	I and c	19
2	Distribution theory for the join count, I, and c statistics	
2.1	Introduction	22
2.2	The join count statistics	22
2.2.1	Mean and variance of BB and BW	24
2.2.2	Higher moments	27
2.3	The Moran and Geary statistics	29
2.3.1	The moments of I , given assumption N	29
2.3.2	The moments of I under assumption R	32
2.4	The distributions of the test statistics	33
2.5	Evaluation of the Distribution functions	37
2.5.1	Simulation study for I	38
2.5.2	Simulation study for c	40
2.6	Stimulation studies for the join count statistics, $k = 2$	41
2.6.1	The experimental procedure	41
2.6.2	Analysis of the results	42
2.6.3	The other join count statistics	47
2.7	Permutations tests	50
3	Applications of the spatial autocorrelation measures to Geary's Irish data and in quadrat count analysis	
3.1	Introduction	53
3.2	Geary's Irish data	53
3.2.1	Interpretation of results	56
3.3	The method of quadrat counts	58
3.3.1	Implications for settlement geography	68

4	Map comparison with application to diffusion processes	
4.1	Introduction	69
4.2	Map comparison	69
	4.2.1 The test	69
	4.2.2 Application to diffusion processes	71
4.3	Empirical example	74
	4.3.1 The Hågerstrand model	74
	4.3.2 Analysis of simulation results	76
	4.3.3 Interpretation of the results	84
5	The analysis of regression residuals—theory	
5.1	Introduction	87
5.2	The general model and alternative hypotheses	88
	5.2.1 The classical regression model	88
	5.2.2 Consequences of autocorrelated errors	90
	5.2.3 Detailed specification of H_1	90
5.3	The choice of test statistic	91
	5.3.1 Correlation among the sample residuals under H_0	91
5.4	The moments of the I and c statistics	92
	5.4.1 Moments of I for a single regressor variable	93
	5.4.2 Examples	95
	5.4.3 Extension to several variables	96
	5.4.4 The moments of c	97
5.5	The BLUS procedure	97
	5.5.1 Derivation of the estimates	98
	5.5.2 Moments of I'	98
5.6	Distributions of the test statistics	99
	5.6.1 Asymptotic normality of the test statistics	99
	5.6.2 A random permutations procedure	100
5.7	The treatment of lagged variables	101
5.8	Estimation in the presence of spatial autocorrelation	102
6	The analysis of regression residuals—some empirical examples	
6.1	Introduction	105
6.2	Regressions from the data of O'Sullivan (1968)	105
6.3	Regressions from Taaffe, Morrill, and Gould (1963)	112
6.4	Analysis of data from Kendall (1939), and Yule and Kendall (1968)	119
6.5	Trend surface analysis of unemployment data	122
6.6	The use of an autoregressive model	128

7	Comparisons of tests for spatial autocorrelation	
7.1	Introduction	131
7.2	Asymptotic relative efficiency	132
7.3	The ARE of tests for spatial autocorrelation	132
7.3.1	The likelihood ratio test	134
7.3.2	Large sample moments for I and c	135
7.3.3	Comparison of the I and c statistics	137
7.3.4	The join count statistics	139
7.3.5	An alternative derivation of the join count results	141
7.3.6	Analysis of regression residuals	142
7.4	Combinations of tests	143
7.4.1	The correlation between the BB and BW join count statistics	143
7.4.2	Relative efficiency of combined tests	144
7.5	Comparisons between tests using real data	145
7.6	Monte Carlo studies	146
7.6.1	The simulation experiment	146
7.6.2	Interpretation of results	148
7.7	Conclusions	153
8	Analysis using partial correlations	
8.1	Introduction	154
8.2	Partial correlations and autocorrelations	154
8.3	Reexamination of O'Sullivan's data	159
	Appendix 1 Models for spatial autocorrelation	161
	Appendix 2 Tables of unstandardised and standardised weights for the Eire county system	163
	Appendix 3 Calculation of maximum likelihood estimator for the autoregressive model	165
	Glossary of notation	166
	References and author index	173
	Subject index	177
